Per British steamer *Manila*, for London via ports:—Surg. Capt. J. J. C. Watson in cabin.

CARGO.

Per French steamer *Melbourne*, for Shanghai via Kobe:—Raw Silk for Europe 675 bales; Waste Silk for Europe, 2,504 bales.

REPROTS.

The British steamer *Belgia*, Captain Hinder, reports:—Sailed from San Francisco, Oct. 30th, at 2.03 P.M., arrived at Honolulu, 5th, at 7.59 P.M., in 63, 8, 17m; sailed thence 6th, at 3.43 P.M., crossing the 180th Meridian in Lat. 26 N., arriving at Yokohama, 2,466 miles, at 11.45 P.M., Nov., 17th, 1897, in 64, 12h, 12m. Moderate to fine weather throughout.

LATEST COMMERCIAL.

IMPORTS.

A little inquiry has been made for shirtings but has resulted in no business of consequence, while in fancy and woolens nothing at all is doing and is not expected to be done before the end of the year. Yarns are also utterly stagnant and spinners are in difficulty, in spite of a further drop in the cost of raw cotton from America.

COTTON PRICE GOODS.

	PER POUND.
Grey Shirtings—8 1/2 h, 38 1/2 yds, 39 inches	\$2.50 to 2.80

Pig Iron, No. 1	2.05 to 2.20
Hoop Iron (1 to 1 1/2 inch)	5.00 to 5.25

IRONWORK.

The market is falling and little business has been done. It is reported in Japanese papers

that a syndicate has been formed in Tokyo for the sale of tank oil at very low rates. This news has created considerable excitement among the retail dealers and as a consequence both American and Russian oils have suffered and few transactions have taken place. Another difficulty is the want of transport to the interior, the railways being blocked with goods beyond their carrying capacity.

American	\$2.08 to 2.11
Russian	2.00 to 2.15
Langkat	2.03

SUGAR.

Prices for Manila have risen five to ten cents per picul, other rates being unchanged. Sales amount to about 14,000 piculs since the 3rd inst. about half of which was Manila. Arrivals during the week amount to about 2,000 piculs of China and Manila. A small quantity of Formosa has been disposed of at a slight advance. White refined has been in fair demand at firm prices.

	PER PICUL.
Brown Takao	\$3.90 to 4.15
Brown Manila	4.20 to 5.00
Brown Daitong	3.30 to 3.55
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

Considerable concessions granted by holders have led to some business being transacted both for Europe and America, but sales have not been large. The *Melbourne* took 682 bales for Europe on the 14th inst. Stocks amount to about 11,000 piculs, inclusive of 1,500 piculs sold but not delivered. Prices may be taken as from \$25 to \$50 lower than quotations.

QUOTATIONS.

	Nominal
Filatures—Extra 9 1/2 h, 10 1/2 den.	\$30 to 940
Filatures—Extra 13 1/2 h, 14 1/2 den.	920 to 930

Kakadas—No. 11	790 to 800
Kakadas—No. 11	760 to 770
Kakadas—No. 11	—

WASTE SILK.

The market is quiet and comparatively little business has been transacted. Prices are weak and inclined to fall. Settlements since Nov. 4 comprise 1,685 piculs. Stocks amount to 11,000 piculs. The *Melbourne* took 1,470 piculs for Europe on the 14th, and the *Sarpedon* 105 piculs on the same date.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomed to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

YOKOHAMA: SATURDAY, NOV. 27TH, 1897.

BIRTHS.

On November 13th, at Kobe, the wife of W. H. GILL, of a daughter.

On Nov. 24th, at Kobe, the wife of C. W. M. BIRCH, of a daughter.

SUMMARY OF NEWS.

GERMANY has despatched three additional ships of war to China.

THE funeral of the late Queen of Korea took place on the 21st instant.

THE Liberal Party will convene a grand general meeting at the Head Office, Shiba, on the 13th of December.

A GREAT fire occurred in Melbourne, Victoria, on the 22nd inst., the damage being estimated at a million sterling.

A GERMAN expert has been engaged as Adviser to the Government Iron Foundry at a salary of over 19,000 yen per annum.

THE Japanese battleship *Yashima* arrived at Hongkong on the 19th instant and is expected at Yokosuka on the 30th inst.

THE German squadron in China has landed 600 men and hoisted the German flag at Kiaochow Bay, Shantung Promontory.

A MOST extensive conflagration occurred in the Cripplegate district of the city of London on the 20th inst. The loss is estimated at four millions sterling.

On the 22nd inst. a seaman named Iwama

Amekichi, belonging to the Nippon Yusen Kaisha's steamer *Kaimon Maru*, now in Yokohama harbour, fell overboard and was drowned.

THE Budget for the next, 31st, fiscal year of Meiji is expected from the printer's hands about the 20th of December. One thousand copies will be issued.

THE Communications Department has increased its estimates by about yen 3,000,000, to develop postal and telegraphic enterprise in the next (31st fiscal) year of Meiji.

THE principal *saké* brewers in Osaka, Nara, Hyogo and Wakayama held a meeting on the 16th inst. at Sakai, when they resolved to oppose the proposed tax on *saké*.

H.I.H. the Crown Prince, now staying in the Akasaka Palace, will proceed to Hayama, Miura-gun, Kanagawa Ken, early in December next and stay there for some time.

SINCE the Nippon Kangyo Ginko (Japan Industrial Bank) opened business early last month, loans of over yen 800,000 have been granted to various establishments.

THE broken cable between Foochow and Formosa, which was to have been repaired within ten days at latest, is not yet in working order owing to the rough weather prevailing on the Formosan coast.

ON the 22nd inst. the Hongkong and Shanghai Bank, Yokohama, drew yen 100,000 in gold coin from the Yokohama Specie Bank; the Chartered Bank yen 50,000; and the National Bank yen 40,000.

TOKUYAMA in Suwo Province, Yamaguchi Prefecture, is to be made a naval port under the control of the Kure Port Admiralty, and a dock will be constructed there for the repairing of war-vessels.

A LABOURER named Hashimoto, of Negishimura, Yokohama, while working goods on board the *Empress of Japan* in Yokohama harbour on the 22nd inst. fell from the ship on to a lighter below and received serious injuries.

SAITO HEISUKE and eleven others, who broke into the premises of Messrs. Murai Brothers, jobacconsists, at Murocho, Nihonbashi, were sentenced on the 20th inst. to fines of from yen 7 to yen 2, with 15 days' imprisonment.

THE thief who stole yen 800 in 20 yen in gold pieces from Mr. Leeman, a British resident living at Honmoku, Yokohama, a few nights ago has been arrested. He is said to be a foreigner who is not recognised by any of the Consuls.

RAW silk arrived and sold in Yokohama this season up to the middle of November, was as follows:—Arrivals 79,693 cases, and sales 65,002 cases; an increase of 20,296 cases in arrivals and 14,674 cases in sales as compared with the corresponding period of last year.

THE military manoeuvres in Kinshiu finished on the 19th instant. During the manoeuvres Lieut.-General Ibaraki, Commandant of the Sixth Army Division, had his right leg kicked by a horse, while riding. It is reported that he will soon recover, the injury being slight.

THE Toyo Kisen Kaisha (Oriental Steamship Company) has made a contract with the Pacific Mail and O. & O. S.S. Companies to open a steamship service between San Francisco, Yokohama and Hongkong. According to the plan the three Companies will run three steamers

each, the vessels leaving the three ports every 8 days by turn. The proposed service will be opened from June next year with nine steamers of over 6,000 tons.

ON the 18th inst. a Japanese junk called the *Niwo Maru* (400 *koku*) owned by Mr. Suzuki Tatsujiro of Agehara-mura, Suto-gun, Shizuoka Prefecture, while on her way from Tateyama, Boshu, to Tokyo, collided with a German steamer near Kannon-zaki and received damage to the extent of about yen 800.

ON the 19th inst., severe fighting took place between workmen of the Okura-gumi and the men of the Arima-gumi (business corporations) in the railway yard at Hikage-mura, Higashi-Yamanashi-gun, Yamanashi Prefecture. Two workmen of the Okura-gumi were killed on the spot and six others were badly wounded.

IN the Department of Communications a Railway Investigation Council is to be organised for the purpose of investigating the management and affairs of the private railway companies in the Empire. The members of the Council will include experts in the Commercial and Home Departments, officers of the Navy and Army, and some instructors in the Imperial University.

IN compliance with the request of the merchants in Yokohama, the Yokohama Railway Bureau has, since the 20th inst., placed ten more luggage cars on the line between Tokyo and Yokohama, making up a train leaving the latter Station at 11 a.m. every day. It is stated that about 100 more luggage cars are needed to convey the goods now awaiting transportation between Yokohama and Shimbashi.

JOURNALISTS in opposition to the present Cabinet held an extraordinary meeting at the Maple Club, Shiba Park, on the afternoon of the 20th inst. when it was unanimously decided that the present Cabinet has acted unconstitutionally. During the proceedings many excited speeches were delivered against the Cabinet, and the meeting dispersed after adopting a proposal to hold a grand meeting of journalists at an early date.

THE Import market remains utterly stagnant. In piece goods, fancies, woollens and yarns nothing but a few small transactions to fill immediate requirements have taken place, and there appears no prospect of any better state of affairs for some time to come. Some little business has been done in metals, kerosene, and sugar, but nothing of consequence. The spinners of Japan, who were recently in difficulties owing to the accumulation of stock and falling-off of sales, are reported to have recently had a stroke of luck in moving off some 4,500 bales of yarn to China and contracts have been entered into for further sales in February next. In Exports not much business has been done. The silk market is quiet and sales for the week amount only to some 500 or 600 bales, buyers having apparently filled most of their requirements. There is not a large stock of raw silk in the market but at present prices it will not be easy to place it. The tea season is practically finished and sales during the week have been limited to about 90,000 catty. The stock remaining, about 174,000 catty, is mostly of indifferent quality. Japanese coal has increased enormously in price, quotations being double what they were two years ago, and the output is considerably reduced. Rice is at too high a figure for export, and large shipments are being imported from Saigon and Siam. Exchange has slightly improved.

SPIRIT OF THE VERNACULAR PRESS.

There are two parties in the economical arena at present, writes the *Fiji Shimpō*. The one declares that the volume of the currency has been inordinately increased and that steps should be immediately taken to reduce it; the other asserts that the country is suffering from a scarcity of floating capital and that the currency should by all means be increased. It seems strange at first sight that while a large increase in the volume of the currency has unquestionably taken place, there should nevertheless be complaints about the scarcity of floating capital, but if the facts are carefully considered, the apparent incongruity disappears. During the war with China the Government withdrew large quantities of money from the capitalist classes and scattered it among the lower middle and lowest classes. Then, after peace was concluded, an extensive scheme of armaments' expansion was planned, and instead of obtaining funds to carry it out by floating a domestic loan so as to recover a portion of the money scattered among the people, great sums of the Chinese indemnity was brought out and spent. Under such circumstances, the funds at the disposal of the consuming classes continued to increase, and the rise in the prices of commodities became still more marked. A natural corrective of such conditions would be increased purchases of imported goods and an outflow of specie, but that factor was more than nullified by the Government's action, for though imports have exceeded exports by large amounts during the past twenty-two months, a still greater sum has been brought into the country from the indemnity. The want of capital has necessitated constant applications to the banks, and the Bank of Japan has endeavoured to tide over the trouble by granting large accommodation, and considerably over-passing the legal limit of its note issues. But since the increased prices of commodities necessarily led to a reduction in the amount of bank deposits, the resources available for making loans have been impaired, and it may be said that the Bank of Japan's increased issues of notes have gone merely to cover the enhanced prices of commodities. It thus comes about that men who record the feeling of the people without reference to its causes, complain simultaneously of an inflated currency and of insufficient capital. At this crisis there has arisen a cry for retrenchment of the programme of armaments' expansion, and several prominent business men are preparing to organise a campaign for the propagation of that idea. It can not be denied that, in so far as such retrenchment would diminish the expenditures of the State, some relief would be obtained. But every thoughtful person must perceive that in her present position Japan has no choice but to develop her armaments. Such a measure is, in effect, the only means to promote the development of commerce and industry by securing an era of peace for their pursuit. Neither can any thoughtful person maintain that the national resources are unequal to the burden imposed on them by the armaments' programme. The national resources have been immensely developed during recent years, and the people are unquestionably able to meet the present strain. Besides, the origin of that strain is to be found, not in the cost of armaments' expansion, but in the fact that the Government has ceased to bring in great sums from the Indemnity and is now turning to the resource of increased taxation. Of course increased taxation means a corresponding diminution of the people's purchasing power, and a fall of prices, results to which business men naturally look forward with uneasiness. But business men must be well aware that a reaction from the present state of affairs is inevitable, and must see, if they give the matter a moment's thought, that a reaction due to wholesome and well understood causes is far preferable to a reaction produced by the bursting of speculative bubbles. If among the men now advocating a reduction of the programme of armaments' expansion, there are certainly some who have the true interests of commerce and industry at heart,

it can not be denied that there are also many whose business is confined to the stock exchange, and who think only of their gambling operations in shares and bonds. The true course for all persons of sound judgment and patriotic feeling is to recognise that an unhealthy state of affairs now exists; that a remedy must be applied, even though the process be painful; that increased taxation is the only sound remedy; and that the way to promote industrial and commercial development is to persevere with the armament programme by which alone the peaceful prosecution of trade and manufactures can be secured.

The *Nichi Nichi Shimbun* adopts a remarkable attitude. It contends that the armaments' expansion programme was divided into two periods by the Ito Cabinet with the express object of making its consummation subservient to the financial resources of the State, and it implies that the inauguration of the second period would have been deferred until the means of carrying it out were plainly in sight, had the Ito Cabinet remained in power. The total expenditures involved in the first-period works were 138 million yen in round numbers, and those in the second-period works, 154 millions. It is easy to see, therefore, what an immense difference would have resulted from putting off the inception of the second half of the programme. Count Matsukata, however, not only undertook the second part at once, without reference to the country's resources, but also committed the State to larger administrative expenditures, and has thus brought about a difficult financial situation. No more significant condemnation of his policy could be found than that furnished by the attitude of the business men. They were always his allies in former times, and he had their loyal support when he assumed the control of State affairs last year, but they have now turned against him, and are organising an attack upon his financial policy.

People talked a great deal about a few cracks in the concrete blocks of the Yokohama harbour works, but were comparatively silent about the much larger blundering over the Sasebo docks. The expenditure of a few hundred thousand yen for purposes of famine relief became an absorbing topic of parliamentary discussion, but the expenditure of many millions of yen for the building of men-of-war provokes little comment. In short, every yen spent on civil objects is carefully scrutinized, but the vast expenditures incurred in connexion with national armaments seem to be regarded as lying beyond the legitimate sphere of public criticism. Further, there is a general outcry against increased taxation, and a corresponding clamour for the reduction of State expenditures, but even those that make their voice most audible appear to shrink from clearly indicating how the expenditures should be reduced, since they are unwilling to apply the pruning knife to the naval and military outlays which constitute the larger half of the public expenses. The *Nippon*, from which we are quoting, denounces all this as most unreasonable. Many people, it says, labour under the impression that the affairs of the army and navy belong to the sphere of the Imperial prerogatives and ought to be treated with the same deference as is extended to the grant for the Household expenditures; others think that questions of armament can not be intelligently discussed by amateurs; others imagine that the results of the late war have imposed upon Japan the obligation of arming on a large scale, and that, to refuse to vote funds for that purpose would be unpatriotic; and others, finally, entertain a romantic notion that the country owes a debt of gratitude to its soldiers and sailors, and is bound to spend money on them. All these views are vigorously combated by the *Nippon*. Above all, it scoffs at the phantasy that amateurs are precluded from discussing the problem of military expansion. They are equally precluded from discussing such subjects as banking, engineering, and so forth. The experiences that Formosa has furnished of civil and military

administration, and of the methods pursued by merchants engaged in carrying out Government contracts, should in themselves suffice to prove the necessity of bringing public scrutiny to bear upon every administrative field. There is but one rational way of placing the finances on a sound footing, and that is to reduce expenditures, and since the outlays on naval and military objects constitute the major part of the expenditures, they can not be excluded from the scheme of retrenchment.

The *Kokumin Shimbun* has a powerfully written article following the lines of the *Fiji Shimpō's* editorial quoted above. The prime purpose of increasing the national armaments is to secure peace for the country. Without peace there can be no healthy development of commerce and industry. Some people appear to imagine that the programme of military expansion is a kind of national luxury, or a mere concession to the spirit of pride, or an outcome of ostentatious tendencies. There could be no greater blunder. It is a stern necessity imposed by the first dictates of national well-being. At the time of the interference of the Three Powers, the universal cry was that, whatever the effort cost, the nation must be guaranteed against any repetition of such humiliations. But two years of peace have sufficed to lull the patriotic spirit to sleep, and men are grumbling about an outlay which, did they examine the matter closely, they would find to be the best possible form of economy, for never yet did the cost of preserving peace bear any comparison to the losses entailed by war. One plea put forward by the advocates of retrenchment is that, by concluding an alliance with a certain country, Japan might abate some part of her warlike preparations. But it is precisely by completing these preparations that she can qualify for such an alliance. That she should present herself naked and helpless as an ally, would be not a proposal of alliance but an entreaty for protection. There are no great Powers in the Occident that will open their arms to such a suitor. The more complete Japan's panoply of defensive, and even offensive, armour and arms, the more confidently may she count on allies in time of need and respect at all times.

The *Shogyō Shimpō* ridicules the critics who, without waiting to ascertain the considerations influencing the business men or the calculations at which they have arrived, abuse them as unpatriotic and reckless because they are understood to advocate a reduction of the programme of army expansion. The business men are calm, long-headed persons, accustomed to handle the *abacus* carefully before they formulate any decision. It may be fairly assumed that they know what they are about. Up to a certain point—a point determined with due regard to the country's needs and resources—they are perfectly willing to endorse the Government's schemes of expenditure. But it is precisely because, as business men, they have acquired a fitting perception of accurate calculations, that they are startled to find an estimate of five million yen surplus converted into an estimate of twenty-five million yen deficiency. A surplus of five million yen was the forecast of the Ito Cabinet for the Budget of the fiscal year 1896-7. A deficit of twenty-five millions is the forecast of the Matsukata Cabinet. That kind of thing does not appeal to the mood of business men. They are indisposed to endorse such reversals of figures, and they argue that one flagrant miscalculation may be the prelude of others. But their habits of close scrutiny and careful estimate forbid them to publish any hasty criticism. They will submit their views publicly when facts and figures can be fully marshalled—until that time, their critics had better suspend judgment. Rational people do not seek to cure the chicken's ailments before the egg is hatched.

The *Meiji Shimbun*, a Liberal organ, writes in terms of withering scorn for the advocates of retrenching the armaments' programme. The

national needs call for an increase of the tax on *sake*, an increase of the tax on land, and so forth, whereupon the *sake* brewers and the land-owners at once rise in arms, and the members of the House of Representatives, fearing to face their constituencies after voting for augmented taxes, support the outcry of the objectors. At that rate the requirements of the public service must always be sacrificed to private interests, and the members of the Diet figure in the unenviable character of mere creatures of their constituents, instead of being servants of the State. Japan's experiences ought to have amply taught her the painful results of weakness. She knows what encroachments have been made on her sovereign rights in the past because she lacked strength to maintain them. Are these things forgotten? Is it forgotten that she was able to conquer her huge neighbour by the superiority of her military preparations, and that, in the very hour of victory, the inferiority of her preparations compelled her to bow her head to three European Powers? Even if she has made up her mind to endure the latter humiliation patiently, can any one be blind to the fact that she is now on the eve of a similar trial at the hands of another great Power? If she is to have peace, she must be strong enough to preserve it. The *Meiji* then vigorously attacks Viscount Tani and Mr. Taguchi Ukichi, who are said to advocate a reduction of the armaments' programme, and compares them and their fellow thinkers to men that shrink from the cost of building an embankment to prevent an inundation.

KYUSHU MILITARY MANŒUVRES.

Some details of the military manœuvres that have been taking place on the plains of Chikuhō, between the 5th and 6th Army Divisions, appear in the vernacular press. The principal idea underlying the operations, the correspondents say, was that a northern army assisted by a strong fleet were to attack a southern army—also supplemented by a squadron of ships—and drive them over sea from positions they had taken up in Kyushu, and then to follow them to Okinawa, where they were to be completely overthrown. The Southern fleet had its rendezvous at Kure and Hiroshima Bay, the troops being distributed along the points of vantage of the same coast. The Northern belligerents belonged to the 5th Army Division and had to advance on Kokura, a citadel held in force by the Southerners, as the first step in the war. The Northern troops consisted of the following:—Vanguard, 12th Regiment of Infantry (Marugame), one company of Cavalry; 1st company of 11th Artillery; 2nd company 5th Batt. Sappers; half company Sanitary Corps. Main Body, one company Cavalry; 22nd Regiment Infantry (Matsumoto); 3rd Batt. 5th Artillery; 1st and 2nd Batt. 5th Artillery; 1st Batt. 5th Artillery; 1st Batt. 43rd Infantry (Marugame); 1st Batt. 44th Infantry (Kochi); 9th Infantry Brigade (Hiroshima); 1st Batt. Sappers, less one company; half company Sanitary Corps; Commissariat, etc. An independent Battalion of the 5th Regiment of Artillery, under command of Lieut.-Colonel Kimura, acted as a flying column. The main body of troops were commanded by General Yamaguchi, Commander of the 5th Army Division; the van being led by General Sakai, Commandant of the 18th Regiment. The armies had their first brush at Hariguri, in the village of Yamaguchi. A small stream runs at the end of this village, which can only be crossed by a narrow wooden bridge. To gain possession of this structure was the aim of both parties. When the attacking force advanced, the defenders met them with a smart volley, the infantry resting their rifles on the wooden balustrading of the bridge. The foreign military attachés rode up at this moment. They were all attired in glittering uniforms and formed a brilliant group as they surrounded Prince Komatsu, Chief of the Staff. His Highness was attended by Generals Nozu, Kawakami, Hasegawa, Oshima, and Tachimi. In addition to the fight at the bridge, a skirmish was also going on between the recon-

noitring cavalry of the Southern Army and a party of troops detached from the van of the advancing force, but the cavalry finding that they were overmatched, retired towards headquarters after a short interchange of shots. They were hotly pursued by the van of the Northern Army, which eventually captured a good position on a hillock in Yamaguchi. Almost at the same time, the invading force took possession of the high land in the vicinity of the temple of Ritsumyōji, and a fierce battle soon ensued. The Northern Army, ever on the aggressive, advanced up the slope to wrest the position from their opponents, and stuck to their work despite the galling fire played into their ranks from above. Meanwhile a cavalry reconnaissance had enabled the Southerners to discover that their enemy were advancing along the national highroad, but in what strength they were unable to ascertain. Steps were taken to strengthen the position at the temple hill, the main body of the troops being collected in the vicinity of Futsukaichi, some slight distance from the hill. The forces were thus very effectually concealed from the sight of troops advancing along the road. The Northern Army, meanwhile, had been divided into three sections—a main body, with wings to the left and right; the cavalry being employed on reconnoitring work. The southern army then slowly brought in its van from the bridge, retreating to the shelter of the rising ground in good form. The vanguard of the Northern Army suffered severely from the rifle-fire poured into them by the retreating invaders, very insufficient precautions being taken to protect them. The main body of the Southern Army drew off towards Harada, a detachment from the left wing proceeding to Hagiwara, then occupied by the right wing of the Northern Army. On the way it dispersed a small body of the enemy that had taken up a position at Kagamura at the foot of Tenpaizan. Meanwhile, the right wing of the Southern Army was manœuvred in such a way as to take it completely away from the fighting. The Northern Army, however, having brought up its entire battalions of infantry from the west of Futsukaichi, made a strenuous attack upon its defenders, the central body of the Southern Army. A furious battle ensued. It should be mentioned that the Northerners had moved their artillery on to a high land covered with a dense spinney of pines, and from this shelter the guns did excellent service. As the correspondent of the *Tokyo Asahi* watched the spirited scene his blood surged with the ardour of battle and he gave his descriptive faculties full swing. "All the mountains echoed and re-echoed with the thunder of the fighting, and the rivers ran red with gore. The heavens would have been darkened and the earth filled with the stifling odour of discharged ammunition had the fight I was watching been waged but six or seven years before. But not a wisp of smoke was to be seen, despite the fierceness of the struggle." The left wing of the Southern Army eventually gave way, retreating from all the posts it had occupied during the day. The main body were not long in following suit, and within a few minutes the Northern Army was in possession of the two strongholds of Ryumeiji and Kamizaka. Just then the trumpets sounded a suspension of the battle.

YOKOHAMA LITERARY SOCIETY.

A pleasingly diversified programme was provided at the usual fortnightly meeting of the Yokohama Literary Society, held at Van Schaick Hall last evening. Prof. Sharp contributed several selections from Dickens' "Christmas Carol," and was warmly applauded. Among the vocal and instrumental pieces were the following:—Overture from Symphony in C Minor (Schubert), Mrs. and Miss Poole; song, "Spring" (Becker), Mrs. James Walter; song, "The Outpost," Mr. Hayward; piano solo, "La Castiglione," Mrs. Döring; song, "The Holy City" (Adams), with piano and organ accompaniment, Mrs. James Walter; song, "Unless," Mr. A. M. Gale.

HAKODATE.

We seem to have been in receipt of very misleading information recently from Hakodate. For example, it has been publicly stated that the steamer *Rhodora* went ashore in the harbour there, whereas we now learn that she was beached purposely. Again, the Japanese papers put the number of houses destroyed in the late fire at seventy, and our own correspondent estimated it at fifty, but the real number was only seven. The most singular misstatement of all, however, is that relating to "Hatoba Charlie" and the Bonin Islander. Both of these persons have been consigned to the grave by rumour, but both are very much alive. The Bonin Islander has purged his offence by a few days' imprisonment, and "Hatoba Charlie," otherwise known as "German Charlie," is going about his business as usual, which business, we may note *en passant*, is that of keeping a grog shop, and Charlie, in his manner of conducting it, is quite as respectable and industrious as they make them in that particular line. We must apologise to Hakodate for having misrepresented it as the scene of accidents more moving than the reality.

FOOTBALL.

Y.C. AND A.C. VERSUS H.M.S. "REDPOLE."

A match was played on the Cricket-ground on Wednesday afternoon, under Association rules, between teams from H.M.S. *Redpole* and the Y.C. and A.C. When play commenced a heavy fog enveloped the ground, but after a while it cleared again and the game could be watched in comfort, but soon after half-time another series of fog-waves swept over the field making it difficult to distinguish players twenty yards away. Only a handful of spectators were present, and not a single lady. We are rather surprised at this, for of all concerted field games football is the most exciting to watch, and in other years many ladies used regularly to put in an appearance at all local matches. Surely the fair sex in Yokohama have not lost their interest in the manliest of winter's manly games! Five goals fell to Yokohama in the first half, four of which were put through by G. Watt, a new-comer to the East, and one by Mair. Watt had phenomenal luck in this matter, for in the field he muffed the ball a good deal. Yet his fault in this direction may be condoned when his front-of-goal play is taken into account. In this respect he taught the other forwards a capital lesson—a lesson they need badly—for he was always up to the front on the ball whenever a scrimmage in front of goal took place. Yokohama has a splendid back defence in Pinckney and Lias—speedy, cool, and sure kicks—but their forward play is ragged. With the exception of Mair and Libeaud, the present forwards shoot wildly, cling to the ball too long, and scatter around too much. Forrest, at half-back, plays a capital game, feeding his men well, while he is always ready to tackle a nasty rush. These were the points most noticeable during the first half of the game on Wednesday when the light was sufficiently good enough to enable the spectators to see what was going forward. When the teams changed over, no material alteration in form took place, though the Navy pulled together better. It should be mentioned that they were playing a man short, one of their half-backs retiring early in the game, having strained the muscles of his right thigh. Only two more goals were scored against them. Mair secured the first from a neat pass from A. Watt, within a few seconds of the start; and Bethell notched the other. The teams were:—Y.C. and A.C.:—K. Kingdom, goal; F. J. Lias and H. Pinckney, backs; H. E. Hayward, E. Eddison and J. Forrest, half-backs; H. R. Mair, centre; G. Watt and A. Watt, H. Bethell and S. Kuhn, forwards. H.M.S. *Redpole*: Auchinleck, goal; Dr. Jeans and Dineen, backs; Hoopell, Campbell and Samuels, half-backs; Page, Peard, Stewart, Docherly, and Trist, forwards. Mr. F. E. White was referee.

GERMAN OCCUPATION OF KIAO CHOW.

It is sometimes exceedingly difficult to fit any theory of reason to the rumours that reach us across the wires. That is notably the case with the latest story that Germany is seeking to gain possession of Kiao-chow in the Shantung peninsula. Of what use would Kiao-chow be to Germany? Nothing in her Far-Eastern circumstances suggests the advisability of having a naval station. She has no colonies in this quarter of the globe, and the very small squadron that she maintains in these waters for the protection of her trade interests certainly does not call for a special dépôt of supplies. Hongkong is always open to her ships and so also are the ports of Japan. There is, of course, the contingency of a war with England, but in that unhappy event the more speedily her vessels departed from these waters, the better for themselves, unless, indeed, she contemplates raising her Pacific Squadron to dimensions such as would enable it to cope with the British ships on the China and Japan Station. Another hypothesis is that Germany may consider it expedient to have a *piéd-a-terre* in China in anticipation of the partition of the big empire. That would be a far-seeing policy indeed, but it is obviously futile to speculate about it. Baron Reuter, however, does not concern himself about the inherent improbability of the news he circulates. It is enough for him that German men-of-war are rumoured to have entered Kiao-chow Bay, and that some exceedingly thoughtless person construes the act as one of territorial aggression. But perhaps it is over-exacting to expect that telegraph agents should pause to discriminate, and fortunately in the present case our bewilderment has been of short duration, for telegrams received independently from Peking and Shanghai make it quite clear that what Germany has done is, not to occupy Kiao-chow as a naval station, but to send her ships and marines there for the purpose of avenging another of those shocking outrages which have disgraced the Chinese in recent years. Full details are not yet to hand, but there appears to have no doubt that on the 1st instant, a mob attacked the German mission at Yen-chow and murdered two of the missionaries, the third barely escaping with his life. News of the assassination was forwarded from Tsuinan-fu by telegram on the 5th instant. The message briefly stated that two missionaries had been killed; that one had barely escaped; that the mob had looted the mission, and that the local officials were conducting investigations. The German Minister seems to have acted with extraordinary promptness, for we presume that the orders by which the Admiral was guided came from Peking. Within a few days—how many we can not determine exactly, but apparently not more than seven or eight—from the receipt of the news, German ships were in Kiao-chow and a force of marines was landed. As to what ensued we have no information yet, but it seems safe to assume that such a resolute beginning did not have a futile sequel. Nothing could be more satisfactory than to find one of the great European Powers acting in this manner. It is evident that the measures hitherto adopted to punish and prevent attacks upon foreign life and property in China have been of no avail. Outrage has succeeded outrage, and while

we do not think that the Chinese Government has been deliberately behaving with bad faith, its arm is plainly not long enough to afford the necessary protection. A very different conception of the consequences of assassinating foreigners will be formed by the provincial Chinese when they hear that the duty of exacting vengeance is undertaken promptly and sternly by foreigners themselves, and that, instead of long, half-hearted investigations which partake of the nature of a fiasco and are followed by the execution of two or three wretched dupes while the real instigators of the crime go scot free, exemplary punishment is inflicted on a scale to be long remembered. Germany deserves the thanks of all the foreigners residing within the Chinese borders for her determined and expeditious procedure. Of course there will be a great deal of thoughtless talk about the contrast between German methods and British methods, and we shall again hear the hackneyed complaint that England, once respected and feared by the whole Orient, has now ceased to be of any account, and has to be instructed in her duty by a state with only a small fraction of her resources. It will be well to remember, before uttering such criticisms, that if two British missionaries had been murdered at Yen-chow on the 1st of November, England would probably have adopted the very measure now taken by Germany. Her Majesty's Government has of late years treated China with exemplary courtesy and patience, but the measure of long-suffering was exhausted some time ago, and we have not the smallest doubt that a murdering and pillaging Chinese mob would now experience at British hands just what the Yen-chow folks are experiencing at the hands of the Germans.

The strange point about the German occupation of Kiao-chow is that it does not appear to have been preceded by any interchange of communications with the Chinese Government such as the custom of nations has hitherto prescribed. According to the information in our possession, the murder of the missionaries took place on November 1st. The German Minister had been travelling for some time in the Yangtze valley, and probably reached Shanghai about the 12th of November. It will be remembered that he proceeded to Hangkow for the purpose of interviewing the Viceroy Chang Chih-tung, and that while he was absent at the Viceroy's *yamen*, sailors in the *Cormoran's* boat, which was awaiting the Minister's return, were stoned by a mob. Baron von Heyking, having obtained full satisfaction from the Viceroy, was expected back in Shanghai before the 13th instant, and we have no reason to suppose that his plans underwent any change. He was travelling in the fourth-class cruiser *Cormoran*, and there were then lying in the Shanghai river or at Woosung, the *Kaiser*—2nd class cruiser of 7,680 tons—the *Arcona*—3rd class cruiser of 1,640 tons—and the *Princess Wilhelm*—2nd class cruiser of 4,400 tons. It was on the 13th instant that three German men-of-war entered Kiao-chow Bay, and they doubtless arrived at an early hour, for by noon six hundred marines had been landed. The vessels must, therefore, have left Shanghai or Woosung on the 11th, at latest, and must have been in receipt of orders by the 10th. But telegrams published in Shanghai on the 9th, showed that the German Minister was in Hang-

kow on the 8th. It would appear, therefore, that telegraphic communications were employed both for the purpose of addressing the *Tsung-li Yamen* through the *Chargé d'Affaires* in Peking, and for the purpose of conveying orders to the Admiral in Shanghai. It is unquestionably the promptest example of a diplomatic and military combination on record—so prompt, indeed, that most people will decline to admit the possibility of any preliminary negotiations with the Chinese Government. On the other hand, except where savage nations are concerned, it has invariably been considered essential that occupations of territory or seizures of property by way of guarantee for the concession of certain demands should be preceded by due formulation of the demands, and by clear evidence that resort to force is necessary for obtaining them. We can only assume that there had been some show of hesitation on the part of the Chinese Government, and that the German Minister determined to occupy Kiao-chow for the purpose of obtaining the immediate grant of his stipulations. But was there any communication with Berlin? Can there have been any communication with Berlin? The news of the murder can not have reached the German Minister before the 3rd at the earliest, and we have seen that the German ships must have left Woosung for Kiao-chow on the 11th at the latest. Thus, in the space of eight days, demands must have been sent from the Minister in the Yangtze valley to Peking; must have been submitted to the *Tsung-li Yamen* by the *Chargé d'Affaires*; must have been rejected, or paltered with, by the *Tsung-li Yamen*; the result of the communications with the *Yamen* must have been telegraphed back to the Minister; must have been forwarded by him to Berlin, and must have elicited an immediate instruction by wire from Berlin. The record is scarcely credible. Yet the alternative is that the Minister acted on his own responsibility, and not only that, but acted with a degree of promptitude closely bordering on precipitancy. Even the "good old times" so often instanced by the surviving "pioneers of commerce," have not bequeathed to us anything so remarkable. With regard to the procedure of the German Admiral at Kiao-chow, it appears that he intimated to the Chinese General Chang the necessity of evacuating Lao-shan with all his troops within a period of 24 hours, counting from 3 p.m. on the 14th instant. The men were to carry with them their arms and their personal effects, but nothing else. Failure to comply with the demand was to entail the commencement of hostilities. Chang obeyed. He retired with his force—said to have been 2,000 strong, but that is probably an exaggeration—to Tsing-tao. It is possible that the German Minister was present at Kiao-chow when the landing of the Marines took place, for he arrived in Peking on the 18th, and might, therefore, have been at Kiao-chow up to the 15th or even the 16th. If—as seems beyond question—this occupation of a portion of the Shantung Peninsula is a direct consequence of the murder of the German missionaries—that is to say, if it is merely a guarantee for the satisfaction of certain claims—it need not be regarded as an act of war. The proceedings of the British Squadron in the *Piræus* in 1847 and even the occupation of the Danubian principalities by Russian troops in 1853,

were not considered as necessarily involving war, and, of course, the fact that the German Minister proceeded to Peking after ordering the occupation, points to a diplomatic sequel. It is suggested by Japanese journals that the incident bears the interpretation of an act of pure aggression undertaken in collusion with Russia, the plan being that the latter should gain possession of Liaotung while Germany seized the Shantung Peninsula, the two Powers thus seating themselves at the entrance to the Gulf of Petchili. We do not live in the age of such *coups*. The dispatch of men-of-war in time of peace to make a descent upon the shores of a friendly Power and seize a slice of its territory, is an act that does not fall within the range of a civilized State's doings in the nineteenth century. There is not the smallest fear of Germany's lending herself to any such performances.

Telegrams despatched from Peking on the afternoon of the 21st instant, report that instructions have been issued by the Chinese Government to the local authorities of Shantung to make vigorous preparations for defence. From the same source we learn that the demands preferred by the German Minister in connexion with the murder of the two missionaries, include a payment of six hundred thousand dollars for the support of the families of the murdered men and to replace the property destroyed; a certain sum—the amount is not named—to defray the cost of sending a naval force to Kiao-chow Bay; the severe punishment of the local officials; diligent search for the murderers and their execution, and two other points which are not set forth in the telegrams. There is evidently no demand for a territorial concession. Indeed, nothing could be more unlikely than that the German Government should seize such an occasion for seeking territorial aggrandisement. We observe that the *Chiao Shimbun* echoes the curious conjecture already formulated in the columns of newspapers which ought to judge more correctly—the conjecture that Germany has been pressing China to grant her a naval port by way of compensation for her action in the Liaotung affair, and that China having shown no disposition to accede, the German Emperor has gladly availed himself of this opportunity to get by force what he has been unable to obtain by persuasion. Considering that Germany's record is absolutely clean from such transactions, and that of all the continental Powers of Europe she is one of the least likely to violate the principles of international morality, there does not appear to be the slightest basis for these suspicions. She seems to have taken possession of Kiao-chow before receiving any final reply to the demands presented by her Minister in Peking, for the telegrams say that China has asked for the withdrawal of the German forces by way of preliminary to negotiations. A territorial seizure prior to discussion is most unusual. Indeed we can not recall any precedent in modern history. But experience shows that to obey precedents punctiliously in dealing with China is merely to create pretexts for vexatious delays and miscarriages of justice. What must strike everybody, we think, is the courage shown by Germany in her procedure. Since the loss of the *Itis* she has, we believe, only five ships on the China and Japan station. It is doubtful whether she could land a force of twelve hundred

men, all told, which means that she could not send more than eight hundred into action. Yet she has quietly seated herself on the Shantung peninsula, and now defies the tens of thousands of troops that China could easily collect to thrust her out. Of course, the little force is under the guns of the squadron, but look at the matter how we may, it is a thoroughly plucky performance. It may, of course, eventuate in a permanent German station on the Chinese coast. If hostilities are resorted to by China—a most improbable contingency, in our opinion—Germany's demands may change greatly in the sequel. It is by no means improbable that she has already approached the Chinese Government with reference to the acquisition of a naval port, however improbable it is that she should make the murder of two missionaries a pretext for seizing what she wants.

A conviction is gaining ground that the seizure of Kiao-chow by the German Squadron preceded all discussion of the demands preferred by the German *Chargé d'Affaires* in Peking. We have already discussed the question of dates in some detail, and have shown that from the time when the German Minister, then in the valley of the Yangtze, received the intelligence of the murder of the missionaries to the time when he issued orders to the ships at Woosung, there can not have been an interval of more than eight, or perhaps nine days. It is not absolutely impossible that demands may have been duly presented in Peking, with a brief limit of time for their acceptance by China, and that instructions may have been obtained from Berlin, before the naval demonstration was made. For example, the *Chargé d'Affaires* in Peking, acting under telegraphic orders from the Minister at Hankow, may have presented a set of demands to the *Tsung-li Yamen* on the 5th or 6th instant, requiring a categorical reply within 48 hours. Then, by the 9th or 10th, the Minister may have been in possession of news that no reply had been given, and he may also have been in possession of authority from Berlin to resort to force in that contingency. So far as the actual lapse of time is concerned, these things are not beyond the range of possibility. But how are we to account for the fact that among the demands presented in Peking, one related to compensation for the expense of occupying Kiao-chow? Were there two sets of demands, and did Kiao-chow appear in the second after the rejection of the first? Such a supposition involves a further crowding of events into an interval of time already packed to the extreme of imagination. It looks very much as though Germany occupied Kiao-chow first and presented her demands afterwards. Should that prove to have been the case, she will certainly be roundly condemned in Europe. To whatever degree of degradation a man may be supposed to have fallen, nothing short of the loss of his intelligence justifies us in seizing him by the throat as a preliminary to the administration of a dose of medicine. That is the method pursued with dogs and horses, not with reasoning beings. The compulsory quality of Germany's action would not have been impaired to the slightest extent had she obeyed the common usages of international intercourse by presenting her demands in due order, fixing a limit of hours or days

for the Chinese Government to make promise of satisfaction, and then, in default of such promise, placing the matter in the hands of the Admiral of her East Asiatic Squadron. Should it turn out that she occupied Kiao-chow first and presented her demands afterwards, such a reversal of the legitimate sequence of proceedings may prove unfortunately embarrassing to herself, for China would certainly be justified in refusing to negotiate under the circumstances, and what course could Germany then adopt? She could hardly send a force of marines to effect reprisals at Yen-chow, which lies fully two hundred miles inland from Kiao-chow. That would be an almost desperate essay considering the paltry number of men available, though probably, were it possible, it would be the most drastic method of dealing with the matter. She might, of course, remain in possession of Kiao-chow, but of all programmes that would be the most futile, for she can not desire to hold Kiao-chow, and its tenure would neither constitute any redress of the Yen-chow outrage nor have any effect in deterring similar outrages hereafter. All foreigners residing in China are interested in the success of Germany's resolute attempt to obtain signal reparation for the Yen-chow murders, and all would regret to find that her procedure was open to criticism, or that she had hampered herself by false steps at the outset. As for China, the measure of her humiliation is now certainly full. Not merely does she see herself placed beyond the pale of the most ordinary international consideration, but her empire with its 300 million inhabitants is invaded and defied by six hundred men.

Nothing could well be more meagre and unsatisfactory than the intelligence contained in the Shanghai journals up to the 19th instant about the complication between Germany and China. Even the details of the attack upon the missionaries in Shantung are not related by our contemporaries. The news of the outrage reached Shanghai—or, to speak more correctly, reached the Shanghai press—on the 10th of November. By the *North China Daily News* it was embodied in a brief paragraph to the effect that a German Roman Catholic priest had been murdered in Shantung, and that another had narrowly escaped. The *China Gazette* was even vaguer. It alluded to a "report" that "some of the missionaries of the German Roman Catholic Mission in Shantung had been killed," but said that no official confirmation of the intelligence could be obtained either at the German Consulate or at the headquarters of the Lazarist Mission. The same paper added, however, that "Baron von Heyking, who only returned from Hankow yesterday (November 9th), had news of some trouble but was awaiting further details which he expected would be slow in coming," and that the German war-ships *Kaiser*, *Arcona* and *Prinzess Wilhelm* had been ordered to hold themselves in readiness to proceed to Shantung in the event of the receipt of intelligence requiring their presence. On the 17th, Shanghai knew that Kiao-chow had been occupied, and we find the missionary trouble then alluded to as "the recent brutal massacre of two Roman Catholic members of Bishop Anser's Mission in Meridional Shantung," but as to how the massacre occurred or who its unhappy victims were, not a word is said. Shanghai seems to have obtained

its news from the crew of Messrs. Siemens's steamer *Loongmoon*, which appears to have been acting as a kind of tender to the German Squadron, and which returned to Shanghai from Kiao-chow on the 17th. She had left the Yangtze in company with the squadron, on the 11th, the date already conjecturally assigned in these columns. The *China Gazette* account of the proceedings at Kiao-chow is as follows:—

What happened, we believe, is this:—On Sunday morning (14th Nov.) the three German warships *Kaiser*, flagship, with the Admiral on board, the *Prinzess Wilhelm* and *Arcona*—entered the bay, and the Admiral sent word on shore to the General commanding the garrison, who held three forts, one on the south point, one in the middle, and one in the northern peninsula, that he had come to obtain satisfaction for the murder of the two German Missionaries of Bishop Anser's Roman Catholic Mission, which took place on the 1st inst. at Yenchu, in the south-east of the province, and that he intended landing a strong party of men and occupying the forts. The Chinese General in command sent back an evasive answer, and tried to refer the matter to Peking, saying he had nothing to do with it. The Admiral returned a peremptory reply, saying he was landing his men in three hours, and would use force to carry out his orders, giving the Chinese garrison that time to evacuate the forts. One of the forts is armed with three old 6-inch guns, the other two with weapons of a more obsolete pattern. The rabble soldiery were composed of the usual coolie warriors, who were scared out of their wits when they saw the foreign devils' ships make ominous preparations for business by running out their guns and lowering yards, while the boats were swung out in readiness for landing men. In an hour's time those on board the German warships could plainly see that the "garrison" was on the move, having discovered urgent business elsewhere, and hundreds of *braves* were seen hurrying over the low hills, bearing their beds, bundles, bird-cages, and the usual pomp and paraphernalia of Chinese warfare, far out of harm's way. Recognizing that the German Admiral meant business the cautious and astute Chinese General sent word on board the flagship that he "yielded to superior force" and meekly bowed his valiant head to the inevitable. He begged to place his life and those of his wives and numerous family under German protection and was ready to obey the honoured commands of the German Admiral! Then about twenty boats from the German ships were lowered and some 600 men with six guns were landed without the slightest opposition and in admirable order at three points, each division marching straight to the nearest fort, which they found tenantless. The Chinese flags were promptly hauled down and the German ensign run up to the top of the flagstaff, whereupon the three warships fired a salute. There was no confusion whatever and the few country people in the neighbourhood quickly recognized what had happened, and after they had recovered from their first phlegmatic surprise accepted the situation, while many of the warriors, with their martial attire replaced by the usual blue garb of the peasants, stole back to see if they could not get a "little chance" to turn an honest few *cash* from their new masters.

The steamer *Loongmoon*, which had gone up on Monday, with despatches from Shanghai, entered the harbour Monday morning, only to find everything perfectly peaceful. She returned here to-day (17th) and leaves again to-morrow, with stores, food, stoves, cooking utensils, etc., and everything necessary for a prolonged occupation of Kiao-chow by a large number of men. The German gunboat *Cormoran* is also to leave here to-morrow for the scene.

It will be apparent that the writer of the above has indulged in some embroidery. Chinese accounts of the affair, published on the 19th of November by the *N.-C. Daily News*, allege that there were no guns in the fort (one fort, it will be observed); that only a portion of it had been completed, according to plans drawn up some years ago by Major von Hanneken, and that, at the time of its seizure, the garrison consisted of 40 or 50 men under a petty officer.

Strange to say, not one of the Shanghai papers gives the slightest thought to the question whether the occupation of Kiao-

chow preceded or followed discussion with the Peking Government. The *China Gazette* says that, according to its information, the negotiations were being conducted directly between Berlin and Peking. That, however, seems very unlikely. The *Gazette* seems to regard the seizure as a perfectly correct and necessary act, without any reference whatever to the forms accompanying it. The utterances of the *North China Daily News* are still more remarkable. For example:—

It has been known for a long time that Germany was anxious to obtain a naval station somewhere on the coast of China, and in endeavouring to settle this Germany has no doubt had to put up with the usual evasion and double-dealing in the exercise of which the Chinese officials are such adepts. On the top of this came the murder of the German priests in Shantung, and it is evident that the German Minister has made up his mind to stand no nonsense, but to take steps to obtain reparation from the Chinese Government, and a fulfilment of Germany's requirements about which there shall be no doubt. It is clear that communications have passed between the German Minister and his Government, and that orders have been received from Berlin to act with promptitude and decision. Full information as to what has actually been done has not come to hand, but it seems clear that the German men-of-war have taken possession of T'-ingtau Fort, situated on an island in the centre of Kiao-chow Bay,—which is so situated as to command the whole of the vast anchorage of the Bay—after having driven out the Chinese garrison. It is more than probable that Germany takes this step not only to secure ample satisfaction for the brutal murder of her subjects, but also to obtain the naval station she requires, and that her occupation of the port will be permanent.

It would be difficult, we think, to find a more comical specimen of perverted morality than this paragraph displays. Not for an instant does it occur to the *North China Daily News* that Germany has no shadow of right to plunder Chinese territory. Our good contemporary is entirely satisfied by the supposition that Germany is "anxious to obtain a naval station somewhere on the coast of China," and on that hypothesis does not hesitate to denounce as "evasion and double dealing" any attempts on the part of the unfortunate Chinese to avoid being robbed. The naïve rascality of such views is beyond comment. We have already expressed the opinion, from which we find it impossible to depart without the most explicit information, that Germany has seized Kiao-chow merely as a guarantee for the satisfaction of her demands in connexion with the murder of the missionaries, and that there is not the least chance of her playing the conscienceless part so calmly attributed to her by newspapers in China and Japan. It may not be without interest to allude, *en passant*, to the dilemma in which the *N.-C. Daily News* is now placed by its "Cassini Convention," so confidently presented to the world and so obstinately clung to. That wonderful document in one of its most wonderful clauses provided for the leasing of Kiao-chow to Russia, and the ultimate purchase by China of all the barracks, docks, and so on that Russia might build there during her occupation. But now that inconvenient German steps in and seizes the very same place! The Shanghai journal, however, does not surrender the Cassini Convention. It opines that "if Russia presses to a point her prior right, it may lead to trouble."

The Emperor of Germany is still too young to indulge in much retrospect. Yet he must sometimes look back to 1893 with considerable chagrin, and just now the recollection should be particularly irksome. It was in 1893 that he startled Europe by his singular picture of the coming peril—

the invasion of the Occident by the Yellow Race—, and allegorically urged all the Powers of the West to join forces for the repulsion of that awful menace, the 300 millions under whose feet the civilization of the white man and his liberties were to be trampled. But his Majesty has now concluded that six hundred German marines are sufficient to exorcise the colossal spectre, to defy the 300 millions.

THE KOREAN FINANCE ADVISER.

According to the *Sōul Independent*, Mr. Alexieff had not "been able to assume the duties of his office" as Financial Adviser up to the 13th instant. The same journal publishes the following translation of the memorial sent in by the Minister of Finance, Mr. Pak Jung-yang, with reference to the engagement of Mr. Alexieff, a document which is said to have caused "quite an excitement in the Cabinet":—

"Through Your Majesty's gracious favour your humble servant has been in charge of the Finance Department nearly a month. But on account of the lack of technical knowledge of financial management on the part of your humble servant the affairs of the Department are not yet in the most satisfactory state, for which your humble servant begs Your Majesty's gracious pardon.

"The matter of engaging foreigners in the Government service requires careful consideration and judgment. Therefore the recent proposal of engaging a Russian as Adviser to the Finance Department was not immediately decided by your humble servant and requested the Foreign Office to give the matter more careful thought before coming to a conclusion, besides, such matters must be brought before the Council of State for consideration of the whole Council. The law clearly states that all important affairs of state must be discussed by the members of the Council in its regular session and none of which becomes law unless the decision of the Council has been approved by Your Majesty. The idea of engaging the Russian was not proposed by the Finance Department and the matter was never brought before the Council. The Foreign Office ignored all the requirements of the law and concluded the agreement on its own responsibility. Your humble servant is at a loss to know upon whose authority the Foreign Office has ignored the law of the country. The Finance Department is entirely ignorant of the terms of the contract nor is it aware of the conditions upon which it was agreed. Your humble servant may be merely a figure-head in the Department therefore it may not be necessary to recognize your humble servant in such matters, but by so doing the rights of the Department have been robbed and the law of the country has been thrown upon the ground. Your humble servant is not only ashamed of himself but he fears that the people would think that there is no man in the Government who can fill the office of Finance Minister with satisfaction to the country. It is true that your humble servant is not properly qualified to fill the position, but he has the instinct of loathing the idea of doing wrong to the country for the sake of obtaining an office. However, it is probably all due to the unworthiness of your humble servant that such an affair has taken place, therefore he begs your Majesty to dismiss him from the Finance Department and punish him for his failure in upholding the dignity and rights of the Department." His Majesty replied as follows:—"You need not make such statements. We accept your resignation."

Mr. Pak's memorial has caused Mr. Cho Pyeng-sik, the Minister of Foreign Affairs to send in a counteracting memorial in which Mr. Cho severely condemned the statements of Mr. Pak by saying that the proposal of engaging the Russian Adviser was originally advanced by the Government last year when Pak was Minister of the Home Department and Acting Prime Minister. When the proposal was made by the Government Pak, then Acting Prime Minister, must have known it, but he did not make any objection at that time, now he claims that he does not know anything about it. Mr. Cho doubts the truth of Mr. Pak's statements and he considers him cunning and deceptive. His Majesty replied to Mr. Cho as follows:—"It is not the time to quarrel and it is not a matter to be opposed by each another. Do your duty and you need not take notice of the other's accusations."

TWO IMPORTANT POINTS IN THE NEXT SESSION OF THE DIET.

It is stated that the Committee engaged upon the revision of the remaining portions of the Civil Code is working night and day in order to be able to submit the Code for approval in the next session of the Diet. The *Kokumin Shimbun*, which may now be regarded as the most trustworthy source of information on official matters, adds that the Government has resolved upon carrying out various reforms in the prisons and in the police, preparatory to the operation of the Revised Treaties, and that, as the cost of maintaining the prisons will have to be transferred from the localities to the Treasury in order to effect the desired changes, a bill in that sense will be introduced in the session of the Diet. These things have very great interest for foreign residents. Unless the remaining portions of the Codes are passed before March, it will obviously be impossible to put them into force from July, and in that event the operation of the Revised Treaties could not take place in July of the following year (1899). What, then, are the prospects of these portions of the Code going through the Diet before March? According to the intention now accredited to the politicians of the Opposition, an Address to the Throne impeaching the Cabinet is to be introduced at the opening of the session. The Cabinet may then adopt one of three courses. It may suspend the session for any period not exceeding three weeks, before the Address is carried to a division, and then, if the House, on reassembling, persists in proceeding with the measure it may dissolve it. That plan would render dissolution virtually inevitable, for since a general election must take place next June under any circumstances, the threat of a dissolution could have no deterrent effect. The second course is to allow the Address to be put to the vote. Such will be the plan pursued, no doubt, if the Cabinet sees any chance of the Address being thrown out. Unlikely things often happen. A very unlikely thing happened last session, for example. The Government's supporters seemed to be hopelessly in the minority up to the very opening of the session, but when the votes came to be counted, it was found that the Cabinet had command of the situation. He were a rash man who should assert that a similar surprise may not be in store for the political prophets next January, though, for our own part, we can detect no symptoms of anything of the kind. If the Address is carried to a division, the Government is almost certain to be beaten, and then dissolution must follow. In either of these cases, all chance of the Code's being passed disappears. The third course is to take no notice of the Address even though it be sent up to the Throne, and to refrain from dissolution until the House rejects the Budget and the taxation bills. Were that plan pursued, there might be time to pass the remaining portions of the Code through both Houses before the Budget Committee's report could be presented. But to ignore such an Address would scarcely be possible, and thus we arrive at the conclusion that, should the Opposition's programme take the form of an Address to the Throne, some postponement of the Revised Treaties must ensue. It may be, however, that the idea of an Address will be abandoned, and that the Opposition

will limit themselves to rejecting the Budget and the laws for an increase of taxes. If so, the interval before the Budget comes up for final discussion can be utilized for passing the Code. It is a difficult situation.

The second great issue is the Budget itself. Strange to say, the vernacular press are silent on that point, though nothing less seems to be involved than the suspension of the *post-bellum* programme of armaments expansion. The repetition of the 1897-8 Budget would not exclude, so far as we know, the extraordinary appropriations for that year, and it is from the extraordinary appropriations that the costs of the *post-bellum* programme are defrayed. Altogether there has not been any session, since the first, so interesting as that now approaching.

BRIBERY AND CORRUPTION.

There is no smoke without fire. We suppose that no one can persuade himself to believe in the perfect integrity of Japanese members of the Diet. Their circumstances are all so favourable to the development of the old fashioned malady *auri sacra fames*. For the most part, the men sitting in the House of Representatives are poor—perhaps we might even go so far as to call them very poor. Some of them, doubtless, have engaged in politics under the impulse of an honest desire to serve their country, and a larger number are in pursuit of the bubble, fame. But others have been tempted by the paltry stipend of eighty pounds sterling that attaches to the position, and others, though they may not confess the fact to themselves, are simply anxious to make capital out of their votes. The history of Parliamentary institutions in the West is not without examples of the uses to which statesmen sometimes put such opportunities; nor is it without verdicts palliating their corrupt methods. Thackeray, speaking of Walpole, who, "with his hireling House of Commons, defended liberty for us," says that the country "never enjoyed such a quarter of a century of peace, freedom and material prosperity until that corrupter of Parliaments, that dissolute tipsy cynic, that courageous lover of peace and liberty, that great citizen, patriot and statesman governed it." Verdicts of that kind may tempt statesmen to play to the distant gallery of future generations instead of obeying the highest principles of abstract morality, but we shall probably be nearer the truth if we conclude that men upon whom the responsibility of governing devolves, generally govern by the aid of the most facile instruments available. Probably if the average Japanese were asked to indicate which statesmen are most likely, in his opinion, to afford a practical illustration of that rule he would point to men of Satsuma origin, for, rightly or wrongly, the representatives of the great southern clan enjoy the credit of being more solicitous about the end than scrupulous about the means. Hence he would regard it as quite in the natural order of things that the name of Satsuma should be associated with the first instance of undue official interference at general elections in Japan and with the first example of parliamentary corruption on a large scale. Japanese journalists that denounce such abuses are doing meritorious work, but journals that resort to wild exaggerations of the facts furnish in their own methods another illustration of the

absence of the principle they denounce. The *Yorodau Choho* seems to be a case in point. It alleges that, in connexion with governmental interference in the general elections in 1893, the Premier, Count Matsukata, put up sixty thousand *yen* towards an expense fund and each of the other nine Ministers of State gave ten thousand, so that a total of a hundred and fifty thousand *yen* was amassed. Now, it is well known that Count Matsukata is not at all opulent: on the contrary, his circumstances have always been more or less straitened. The idea of his paying out such a sum as sixty thousand *yen* for purposes of a political campaign is quite inconceivable. Apart from that, however, there is another palpable discrepancy in the story. It speaks of "the other nine Ministers" whereas in 1893 there were only eight Ministers in addition to the Minister President. That is a very trifling point, but it suffices to throw more or less discredit on the whole tale. The *Chuo Shimbun*, again, asserts that the Government proposes to sell twenty thousand *tsubo* of land in the Kanagawa Fort to one of the noblemen and to apply the money to the purposes of an electioneering campaign. It is not to be imagined that the *Chuo* believes anything of the kind. The Government can not make away with the property of the State to suit its own convenience. A sale of public land would have to be passed through the accounts, and the proceeds could not possibly be diverted to a secret purpose. Wild inventions of that class carry their own refutation, but ignorant people are doubtless deceived by them. To a different category, however, belong the criticisms of a powerful body of representative journalists, who assembled at the Maple Club in Shiba Park on the 10th instant, and passed two resolutions declaring that the present Cabinet is undermining Constitutional Government, and that all good subjects should unite to uphold political rectitude and integrity. Whatever vagueness the language of the resolutions might suggest was removed by the utterances of their introducer, the well known Mr. Taguchi Ukichi, a man of unsullied reputation and transparent sincerity. He explicitly charged the Cabinet with bribing members of the House of Representatives. Unfortunately his speech was marred by great extravagance in other respects, for he denounced the Business Tax as unreasonable, immoral and barbarous, terms that betray passion, not reflection. Still, not a dissentient voice was raised against the charge of bribery, and we are bound to assume that men like Mr. Taguchi and his contemporary editors do not speak without reason. The bright feature in the situation is that they do speak. That is a healthy sign. It may be classed with the agitation roused by the compulsory retirement of Judge Takano. Technically the agitators are wrong, according to the verdict of competent legal experts. They are without warrant when they allege that the Government had no Constitutional right to remove Mr. Takano. But the instinct that impelled them to rebel against the exercise of such a right in such a manner, is just as sound as the instinct that impels the editors of Tokyo journals to combine for the promotion of official integrity. These evidences of wholesome public spirit are so significant that we are almost tempted to welcome the abuses by which they have been evoked.

SŌUL NEWS.

A correspondent writing from Sŏul under date of the 11th instant, says:—There have been some developments of the situation within the past few days. The British Consul-General, Mr. Jordan, insisted on an audience with the Emperor, and obtained it, on the 3rd instant, if I am rightly informed. Meanwhile, the Foreign Minister had evidently proved "inconvenient," for he was removed, and the notorious Cho put in his place. On the 5th instant, he signed an agreement with the Russian *Chargé d'Affaires*, pledging the Korean Government to accept the services of Mr. Alexieff, as Financial Adviser. The Minister of Finance made a viogrous protest—that is to say, vigorous for a Korean—against the engagement of an adviser for his Department without consulting either the Minister under whom the adviser is to work or the Council of State. He begged to be relieved of his office, and his request was, of course, granted. A protest was made by the Foreign Minister also, but it does not seem to have had any serious motive. Riding rough-shod over everything feebly expresses the impression produced upon on-lookers here by the action of Russia. What England will do, I have no means of knowing. Mr. Brown still keeps his place in the Customs office, and at the Finance Department, also, I understand. He is a man of great ability and courage, but between the peremptory demands of Russia and the pliability of the Emperor, there is not much room for any exercise of independent capacity. If Mr. Brown and Mr. Jordan are unable to stem the current, it is the conviction of people here that nobody can. What the end will be is the question that we anxiously ask ourselves. To-day (Nov. 11th), at the reception in honour of *Dai Han* by the Independence Club, Japanese, British and Americans were present, the first named especially in large numbers. Not a Russian, not a Frenchman, was on the ground. There may be nothing in this. I merely mention the fact. On your side of the water you know, of course, much better than we do what Japan is likely to do. There is not an able man now in the Korean Cabinet. If Russia proposes to take the country, as her proceedings seem to suggest, she can scarcely find better tools than the present occasion offers. At all events, it is easy to see that when any of the tools become at all refractory, away they go. I witnessed an incident to-day which surprised me as an indication of the feeling that exists against Russia. Two Russian officers passed down the street. Some Korean school-boys were drilling with improvised guns. They happened to be resting at the moment, and the Russian officers, though at some distance, looked curiously at the drill. The boys raised their imitation guns, not exactly to the aiming position, but significantly near it, and made some growling ejaculations. This was a revelation to me as reflecting a sentiment that certainly did not originate with the boys themselves. Meanwhile, our young, progressive, and urbane Governor pushes on the work of street improvement, and we may now look forward to having two good roads to the river in a short time. The construction of the Sŏul-Chemulpo Railway is also proceeding with all the vigour possible. A code of procedure for the Sŏul Courts

has been drafted by foreigners and adopted by the Government. Altogether, if some one would only send us a little Imperial back-bone, the situation would not be so desperate.

COUNT ITAGAKI.

The veteran leader of the Liberals—no longer, indeed, the nominal President of the Party but still regarded by the nation as its head—is represented as having made to a reporter of the *Fiji Shimpō* various statements, some of which appear scarcely credible. For example, the Cabinet is alleged to have offered the portfolio of Finance to Mr. Hoshi Toru on condition that he won for the Government the support of the Liberals in the next session of the Diet, and when Mr. Hoshi refused, pleading ignorance of financial affairs, the portfolio of Justice was substituted. It may well be supposed that Count Itagaki finds much to criticise in the recklessness that would have placed the finances under the care of Mr. Hoshi, despite the fact that finance was the ground upon which Count Matsukata came into office and is also the origin of his present difficulties. But the criticisms have no particular interest until we know whether their basis is true, which is just what we do not know and do not believe. It seems, however, that Count Itagaki is "very bitterly opposed to the present Cabinet," and declares that had the standing committee of the Liberals voted in favour of union with the Ministry, he would have returned to political life, and applied himself to re-organizing the party. "Happily," he added, "such a vote was not recorded." But it appears to us that although a majority of the committee voted against union, the fact that nine out of twenty-four voted in favour of it, shows the party to be sadly in want of the re-organizing abilities of Count Itagaki—speaking, of course, from his point of view. If nine committee-men approve of coalition with the Cabinet, twenty or thirty out of the party's sixty parliamentary members are not unlikely to be found in the Government's camp next session. The Liberals would then be reduced to a feeble remnant.

OFFICIAL APPOINTMENTS.

The vacancies created in the presidency and ranks of the Council of Administrative Reform Investigation by the retirement of Count Okuma and resignations or removals of various Progressionist officials, have been filled up thus:—

To be President, H. E. Mr. Kioura (Minister of Justice).

To be Members H. E. Viscount Tanaka Fujimaro (Privy Councillor); H. E. Mr. Kioura (Minister of Justice); Prof. Kikuchi (Vice-Minister of Education); Mr. Hirayama (Chief Secretary of the Cabinet); Mr. Ume (Chief of the Legislative Bureau); Mr. Okuda (Vice-Minister of Agriculture and Commerce); Vice-Admiral Viscount Nire (Privy Councillor); Mr. Ozaki Chiujii (Privy Councillor), and Viscount Kawase (Court Councillor).

The Council, as previously organized, did not include any representatives of the Army or Navy. It is probable that Vice-Admiral Viscount Nire, being no longer on the active list, is not regarded as a naval representative.

Mr. Hirayama (Chief Secretary of the Cabinet) and Mr. Ume (Chief of the Legislative Bureau) have also been nominated members of the Treaty Revision Operation Preparatory Committee.

THE GOLD CURRENCY.

The returns of silver coins and notes presented for exchange against gold from October 1st to November 15th are as follow:—

	During October. Yen.	During 15 days of November. Yen.	Totals. Yen.
Silver Coins	1,433,902	216,292	1,650,194
Notes	3,477,528	1,422,303	4,899,831
Totals	4,911,430	1,638,595	6,550,025

It may be remembered that when the Japanese newspapers were predicting the inflow of great quantities of silver *yen* for exchange—sixty or seventy millions was the figure generally indicated—we frequently expressed the opinion that nothing of the kind need be anticipated, and that operations of that nature would probably be on a very limited scale. We can not, however, claim the credit of having judged rightly, for the conditions have not been such as to test the soundness of our belief. At the time when the lugubrious predictions were published, silver stood at 24 pence an ounce, and a substantial profit might have been realized by carrying silver *yen* from China and the Straits Settlements for exchange in Japan. But the quotation having changed quickly to 26 pence, the margin of possible profit disappeared, and consequently our forecast that, in spite of the low price of silver, not more than twenty or thirty million silver *yen* would be imported for exchange from first to last, has not been tested by events. If, as now seems very probable, the Government introduces a Bill next session reducing the exchange period for the silver *yen* to three months from April 1st, and if, as seems probable also, no very marked appreciation of gold takes place during that period, the Treasury may altogether escape any considerable drain of the yellow metal. No one will import silver *yen* for exchange merely on the chance of their bullion value's decreasing at some future date. Unless there is a substantial profit directly in sight by converting the coins into sterling, they will continue to circulate in China and the Straits side by side with the Mexican dollar. Japan will have reason to congratulate herself when this element of instability is removed from her new system.

TAILORS OF YOKOHAMA & TOKYO.

There has existed for some time in Yokohama an association of tailors calling themselves the "Yokohama Japanese and Chinese Dress-making Corporation." Each member of the body is supplied with a schedule of charges, and is under strict promise to abide thereby. We have no knowledge of the cost of making ladies' frocks, but we imagine that a sovereign (10 *yen*) for the tailoring of a wedding dress and a shilling (50 *sen*) for making a corset-cover—whatever that may be—are emphatically moderate charges. The tailors of Tokyo have now joined hands with their fellow-snips of Yokohama, and announce that they will be hereafter guided by the same schedule of charges. Probably some of the fair sex will not be over well pleased to learn that the pleasant uses of competition are thus at an end. It is difficult, however, to harbour any resentment against these debilitated-looking, deferentially-moving folk who contribute so much to the embellishment of things of beauty and are so very un-

beautiful and seemingly unprosperous themselves. They make a man's dress suit for seven *yen* and a suit of ditto for five. If they could only contrive to fit one well, how delightfully cheap that would be! But we fear that the old proverb, "penny wise pound foolish," applies to most of their male customers. The most patient and penurious of men can not induce himself to wear an ill-fitting suit for more than about one-half of the time that a good fit serves, and has discomfort into the bargain. A good tailor and a good cook are among the chief economies of life. Ladies, however, seem to fare well enough with Chinese and Japanese tailors. Are they easier to please than men?

THE CABINET AND THE LIBERALS.

It is alleged by the *Fiji Shimpō* that the Government has made a strong but unsuccessful effort to secure the cooperation of the Liberals. Our contemporary says that the proposal made by the Cabinet included the appointment of Mr. Hoshi Toru to the post of Minister of Justice—the holder of the office, Mr. Kioura Keigo, being transferred to the Department of Finance,—and the allotment of another portfolio to one of the Liberal leaders. Various other conditions were also advanced, and the negotiations assumed a definite form on the 17th instant. The Liberals held a meeting at 7 p.m. on the 18th to consider the proposition. Their debate lasted until one o'clock the following morning, the result being that, out of twenty-two members present, two voted for supporting the Cabinet, seven were willing to give it their support provided that certain alterations were made in the conditions, and thirteen opposed the scheme uncompromisingly. We are not disposed to place implicit credence in the story, but we give it for what it may be worth.

It is alleged that the failure of the pro-Government Liberals to effect an alliance between their Party and the Cabinet is not regarded as final. Another attempt in the same sense will be made by the promoters of the scheme at the meeting of Liberal members of the Diet which is to be held on December 14th, and which will be followed by a general meeting of the Party on December 15th. It does not appear probable that success should ultimately be secured for the project, seeing that it has once fallen through, but insistence on the part of its advocates is not unlikely to produce another split in the ranks of the Liberals. Meanwhile, a vigorous denial is given to the rumours recently circulated in the sense that Count Matsukata, seeing no prospect of obtaining the support of the Liberals, has resolved to resign. No such intention is said to exist. The Cabinet will proceed boldly with its programme of increased taxation, and challenge the Diet to reject it.

THE EMPEROR AND THE ARMY.

The Emperor has issued an Imperial Rescript to the officers commanding the troops of the 5th and 6th Army Divisions, in which he says that he has been kept *au courant* with the details of the manœuvres through which the troops have just passed. His Majesty then urges his officers to keep in touch with the progress of the outside world in all that concerns military affairs, for by so doing they will the better be able to safeguard the throne and their country.

BALL AT THE CHINESE LEGATION.

The Chinese Minister and Lady Yu gave a brilliant ball at the Chinese Legation in Nagatacho on the 20th instant. Owing to the fact that the period of Court mourning for the late Empress Dowager has not yet concluded, no Japanese Ministers of State or high dignitaries were present, and the British Legation, being also in mourning, was not represented. With these exceptions, however, all the "rank and fashion" of Tokyo may be said to have availed themselves of the Minister's hospitality, but invitations having been issued on a somewhat limited scale, not more than two hundred guests were present. Thus the ball room, which was brilliantly lit and very thoroughly warmed—perhaps too thoroughly—never became crowded, and the dancers were able to enjoy themselves without drawback. We may note that the foreign dance seems to find more favour with the Chinese than with the Japanese, for whereas not a solitary Japanese lady and only one Japanese gentleman took any part in the performance on Saturday, the Messrs. Yu and the Misses Yu danced from first to last with every appearance of vigorous enjoyment, and with a degree of conscientious accuracy in "squares" that bespoke keen appreciation. The band, which evinced a lusty spirit, began to play at nine, and thenceforth until nearly four in the morning there was no flagging. Supper was preceded by the taking of two lime-light photographs, and followed by a *cotillon* very prettily devised and well sustained. We may add that the members of the Foreign Corps Diplomatique were entertained at dinner before the ball.

THE REASON OF COUNT OKUMA'S RESIGNATION.

What we have already written on the subject of political parties and the recent crisis, probably embodies the real reason of Count Okuma's resignation. There has been much perplexity about the reason. Some have sought it in a supposed cabal on the part of the Satsuma members of the Cabinet—especially Viscount Takashima and Count Kabayama—the motive of which was to drive the Foreign Minister out of office and get the direction of affairs wholly into Satsuma hands. Others have preferred to think that the question of finance was the chief issue; and others, again, have affirmed that Count Okuma's failure to bring the Cabinet to his way of thinking with regard to administrative reforms induced him to retire. But it appears to us that none of these reasons is conclusive, and that the real cause was Count Okuma's loyalty to his Party. As a statesman he must have seen that the Cabinet had no choice but to break with the Progressionists; as a politician he must have felt that he had himself no choice but to break with the Cabinet. The long habit of opposition had created in the minds of the Progressionists a false estimate of the possibilities of power. They anticipated such large results when the direction of State affairs came under their control that disappointment was inevitable. Losing their heads in the bitterness of disappointment, they took a step fatal to continued alliance with the Cabinet, and by the inevitable rupture that ensued Count Okuma was placed in the dilemma of having to choose between his official

colleagues and his old political friends. He can not have thought that the Progressionists had acted wisely, or that their conduct left the Cabinet any alternative, but it practically left him also no alternative. Of course he is himself to some extent responsible for the false standards by which the Progressionists seem to measure the duties of Cabinets and the obligations of political parties, but he doubtless anticipates that the present lesson will have corrective effects. We strongly suspect that in the discharge of his duties as Foreign Minister he must often have wished that his political followers were better educated in the uses of moderation, and that his acts might have been left to speak for themselves without the aid of party trumpets.

REVENUE FROM TAXES.

The total revenue collected by taxation in Japan at present, according to the *Osaka Asahi*, is 90,984,459 *yen*, and its sources are as follow, omitting sums under a million *yen* :—

	YEN.
Land Tax	38,668,991
Income Tax	1,905,696
Sake Tax	29,823,852
Tobacco	2,234,146
Soy Tax	1,479,994
Trades Tax	5,874,168
Customs Revenue	6,626,829

We do not know why the Registration Tax is omitted from the list, seeing that the Government's original estimates of its yield was 6,808,449 *yen*, and though the Diet's amendments of the Bill were expected to diminish the yield by about 1½ million *yen*, the proceeds of the tax should still be over five million *yen*. In fact, we do not understand the *Asahi's* figures. They can not represent the actual collections for the current year, since no data for such a statement are yet obtainable, and they differ from the Government's estimate. The vagueness of Japanese journals in dealing with financial matters is sometimes of the most exasperating nature. The *Asahi*, for example, speaks of the above table, as setting forth the taxes "now" (*gensai*) collected, but what "now" means we are left to conjecture.

UNREGISTERED SHARES.

The Commercial Code, at it now stands, requires that the shares of all joint stock companies must be registered—that is to say, must be inscribed with the names of their holders. Of course, that provision involves considerable trouble in selling or pledging the shares, changes of registration, presentations of powers of attorney and so on being generally required. The Committee now engaged revising the Code proposes, therefore, to effect an alteration by inserting the two following clauses :—

- (1) After all the installments have been paid on the shares of a joint stock company, unregistered shares may be issued.
- (2) In order to obtain the power of taking part in the discussions at a general meeting of shareholders, the owner of unregistered shares must submit them to the company five days before the meeting.

The former clause is welcomed as likely to confer great facilities, but it is feared that the latter may prove very inconvenient in the case of shareholders whose shares, being hypothecated, can not be produced and lodged with the Company.

RUSSIA'S POLICY IN KOREA.

THE difficulty of criticising Russia's policy in Korea is that the acts attributed to her are scarcely credible. To us, indeed, they seem particularly hard to believe, for we have never been able to sympathise with the Russo-phobe disposition displayed by many of our countrymen. Russia is subject to the same law as every other State: she must grow or decline, and since she is still in her period of growth, we see no more reason to abuse her for her territorial advances than we see to condemn Great Britain for similar expansion. Above all, Russia's struggle for a route to southerly seas is so natural that we fail to understand how any thinking person can censure it. If she places herself wilfully across England's path, every Englishman would be ready to take a part in the effort to thrust her aside; but to condemn her simply because she does what our own country does, appears unjust and narrow-minded. As between the generally beneficent results of Russia's territorial expansion and England's territorial expansion, Englishmen may fairly reflect with pride that no room exists for doubt. Wherever England goes, the whole world is free to follow, and whatever privileges British arms win, all nations are invited to share equally. That is not the case with Russia. It is still her habit to impose restrictions and limitations, the effect of which is that districts occupied by her cease to be freely accessible to merchants and manufacturers of alien nationalities. But for that feature of her policy—a feature common to several States of the European continent—the southward march of her boundaries might be viewed with comparative equanimity. Englishmen that entertain opinions of the kind here set down—and there are many such Englishmen—must find themselves considerably perplexed by the doings attributed to the St. Petersburg Government in Korea, and must be correspondingly anxious to discover some reasonable explanation. As to the general question of Russia's proceedings in the feeble peninsular kingdom—now somewhat comically re-christened “empire”—the chief difficulty is to reconcile them with the position taken by her in the spring of 1895. It was avowedly to preserve the independence of Korea that Russia, Germany and France called upon Japan to restore to China the northern litoral of the Yellow Sea and the Liaotung Peninsula. The collective note of the three Powers declared that, with Japan thus posted, the independence of Korea would be illusory. In every-day life, if three men combine to drive another out of a position which, though fairly acquired by him, might enable him to interfere arbitrarily in his neighbour's affairs, the plain duty devolves upon each of the three not to become

himself an interferer in those affairs, and the equally plain duty devolves upon the other two not to permit such interference. When Russia, Germany and France took the extraordinary step of driving Japan off the Asiatic continent lest her presence there should become a menace to Korean independence, they publicly constituted themselves guardians of Korean independence. There can not be the slightest doubt about that proposition. Hence, that one of the three should, almost immediately, adopt a course leading apparently to the sacrifice of Korean independence, the other two tacitly acquiescing, is an issue so inconsistent with the rudimentary principles of interstate morality as to be scarcely credible. Before endorsing such an accusation, we have to look carefully whether the situation justifies it. There are two aspects of the question, Russia's action towards Japan and her action towards the world. Of Japan's designs upon Korea the St. Petersburg Government obviously entertains grave suspicions. The united demand for the retrocession of Liaotung was a public declaration of such suspicions. Whether they are chimerical or justified we need not consider here. Our concern is only with the fact that Russia entertains them and that they affect her dealings with Japan. That is natural. If people imagine that someone contemplates an illegal act which would inure to their own disadvantage, the measures that they take to defeat his purpose are not likely to be regulated by the strict dictates of courtesy and friendship. Russia distrusts Japan's intentions towards Korea and shapes her own course accordingly. Thus considered, her supply of drill instructors for the Korean army and of a financial adviser for the Korean Government becomes a legitimate measure. It is not in itself inconsistent with the maintenance of Korean independence. On the contrary, since financial solvency and military strength are the first essentials of national independence, Russia may fairly claim that whatever aid she lends to make Korea strong and solvent, is a proper sequel to the Liaotung intervention. But it is just to look at the matter from Japan's point of view also. Has Russia's conduct towards Japan been warrantable even on the hypothesis that it is dictated by distrust? In 1896, Prince LOBANOFF concluded with Marquis YAMAGATA a Convention which, though its language leaves much to be desired in point of explicitness, is not open to any misconstruction as to its general object. There is no KAINARDJI conundrum to puzzle diplomatic interpreters. The Convention means, and can only mean, that the signatories pledge themselves to adopt and maintain a precisely similar attitude towards Korea, neither seeking to supplant the other, and neither seeking to gain a footing in the peninsula's affairs to the other's exclusion.

Since the Convention was concluded, Russia has supplied to the Korean army a large number of drill instructors, and has also placed one of her own subjects in virtual control of Korea's finances. There can be no question that such acts are violations of the spirit, if not of the precise letter, of the LOBANOFF-YAMAGATA Convention. Indeed, there is no question. The plea advanced on Russia's behalf is that her procedure is exempted from the purview of the Convention by a promise made before the Convention was signed. It is alleged that when MIN YONG-HWAN visited St. Petersburg, he made application to the Russian Government for military instructors and a financial adviser, and that the Russian Government promised both. MIN YONG-HWAN was the Korean Ambassador on the occasion of the CZAR'S Coronation, and Marquis YAMAGATA was one of the Japanese Ambassadors. We are thus invited to believe that when Prince LOBANOFF gave to Japan a written promise engaging Russia not to interfere in Korea's military and financial affairs, he actually had in his desk a promise of exactly the opposite import which had been made a few days previously to Korea. To accept that explanation would be to convict Russia of very flagrant double-dealing and very clumsy diplomacy. If it was her intention to thrust Japan aside in Korea and to make her own influence paramount there, she need not have wantonly aggravated Japan's resentment by giving to her a promise which there was so little intention of observing that arrangements had already been made for its violation. There was no occasion to flout Japan conventionally as well as to circumvent her diplomatically. That is the point which we find so difficult to understand in Russia's procedure. We could appreciate her if she explained that the LOBANOFF-YAMAGATA Convention had no aim except to secure Korean independence, and that to lend experts for the training of Korean soldiers and the regulation of Korean finance can not reasonably be construed as a menace to Korean independence; but when she admits that such a step would have been interdicted by the Convention had not a prior engagement existed, she places herself in an exceedingly equivocal position. Unfortunately, too, the second aspect of the question, namely, Russia's action towards the world, renders it impossible to credit her with any ingenuous solicitude for Korean independence. It is one thing to come to the aid of a Power whose finances are so mismanaged as to threaten ruin at home and even complications abroad. It is another thing to force one's assistance upon a Power whose finances have already been brought under the able and successful control of a neutral expert. If Russia had sent Mr. ALEXIEFF to Seoul two years ago, and had insisted on his employment

by Korea when the latter's finances stood in urgent need of organization, the measure might have been construed as a genuine means of promoting Korean independence. But a thoroughly competent Englishman had been in charge of Korea's finance for more than a year before Mr. ALEXIEFF'S departure from Europe. Hence Russia's determination to have her own nominee employed, invests her whole procedure with a character of self-seeking. The manner of Mr. ALEXIEFF'S engagement must also be noted. His services are given to Korea under an agreement signed, not by himself, but by the Governments of Russia and Korea. That is a completely new departure. As to its significance, we need not say anything. As to its dignity from the point of view of a great Power like Russia, there can scarcely be any second opinion. Much might be written, of course, about the clauses of the agreement which declare Mr. ALEXIEFF'S engagement to be permanent, and bind Korea, for all time, not to avail herself of the financial services of any foreigners other than Russians. But we are without any guarantee of the authenticity of those clauses, as well as of the reality of a secret treaty by which the Emperor of KOREA, in consideration of the protection afforded to him at the Russian Legation, is said to have promised, first, that Korea's foreign military instructors shall be Russians; secondly, that her foreign financial advisers shall be Russians; and thirdly, that all her present foreign *employés* shall be replaced by Russians. Without attaching implicit credit either to the published terms of Mr. ALEXIEFF'S engagement or to the alleged secret treaty, we find quite enough to surprise us in Russia's procedure, and to make us think that she has embarked upon a course of diplomacy which cannot be justified in the eyes of the world, and can be justified in her own eyes only by its results.

NAGASAKI WATER-FRONTAGE QUESTION.

FALSE rumours appear to be getting into circulation about the question of the Nagasaki water-front lots. It is stated, for example, that the Japanese Minister for Foreign Affairs has absolutely refused the claim for compensation made by the holders of the lots, and that nothing remains for the latter but to sue the Nagasaki Local Authorities in the Law Courts. The *Nagasaki Press*, commenting on this statement, rightly observes that no direct claim for compensation has yet been advanced, but is nevertheless disposed to conclude that the Minister for Foreign Affairs has intimated his inability to entertain any claim of the kind. According to our own information, the question of compensation has not been definitely raised as yet. The discussion has turned rather upon the point whether such a

change as that contemplated at Nagasaki can be legally undertaken without previous reference to the Foreign Consuls. In the British treaty, for example, it is provided that "the place which British subjects shall occupy for their buildings, and the harbour regulations, shall be arranged by the British Consul and the Japanese Local Authorities. * * * No wall, fence, or gate shall be erected by the Japanese around the place where British subjects reside, or anything done which may prevent a free egress or ingress to the same." The position assumed, we believe, by the foreign Ministers who are connected with the matter, is that this provision of the Treaty must be read as an engagement on the part of the Japanese authorities not to make any essential change in the environment of a foreign settlement unless the foreign Consuls are consenting parties. It will easily be seen that to acknowledge such a proposition in its entirety would be difficult for the Japanese Government, since it touches the right of eminent domain which every sovereign State jealously guards. At the same time, the sole purpose of the foreign Representatives in seeking to obtain official recognition of the principle, is doubtless to guarantee the settlements against arbitrary alterations which would impair their residential convenience or commercial facilities. To that extent the Japanese Authorities must be assumed to be of the same mind as the foreign Representatives. They would not think of sanctioning a scheme for filling in Yokohama harbour, for example, or destroying the roads that lead to it on the land side. But how is a limit to be fixed? It seems to us that both parties are in a somewhat similar dilemma. If the foreign Representatives claim to be consulted about every change, they encroach at least as much upon Japan's right of eminent domain as Japan would encroach upon their Treaty right by refusing to consult them at all. The word "arrange" in the Treaty obviously carries no meaning more extensive than "determine." It was so understood by the Japanese negotiators, for we find that the corresponding term in the Japanese text is *sadamu* (to fix or determine). Hence the obligation of consulting the Consuls appears to be confined to the choice of sites for settlements. After a site has been selected by mutual consent, the Japanese are simply bound not to do anything which shall interfere with freedom of communications, or tend to isolate the settlement. But it does not appear that they are bound to consult with the Consuls before undertaking any work affecting the topographical features of the surroundings. It is scarcely possible to conceive practicable changes so extensive as to destroy the eligibility of a settlement's site, but were such changes contemplated, an obligation to confer with the Consuls would certainly devolve upon the Japanese Authorities,

for the Consuls might reasonably argue that their choice of the site had been guided by its actual features at the time when the choice was made. With regard, however, to changes that are not attended by such radical consequences, we apprehend that the Treaties can scarcely be construed as investing the Consuls with any right to be previously consulted. The Japanese are definitely pledged not to build walls, fences or gates around the settlements, or to do anything that shall interfere with facilities of ingress or egress. If they undertake works that violate those restrictions, they expose themselves to protest, but beyond that the Treaties do not go. In Nagasaki's case, therefore, the question narrows itself to this—is the projected filling of the harbour's upper end calculated to impair egress and ingress to the Megasaki and Deshima sections which have their frontage on the part of the harbour affected by the scheme? Evidently that can not be decided without examining the plan of the work. Speaking generally, deprivation of water frontage involves a loss of facilities of communication; but if the conditions of the water frontage are such as not to afford any facilities of the kind, no loss can be alleged. At Nagasaki the project is to convert into building land a mud-bank now scarcely a-wash at high water. Presumably canals or channels will be cut, in which event the facilities of ingress and egress may be improved, not impaired. As to that we can not speak. If will be seen, however, that the problem is decidedly complicated. Unfortunately for the protest of the foreign Representatives who have taken up the matter, the proposed filling is admitted to be an improvement: the settlement in general will gain by it. Hence the occasion is not opportune for asserting the consultative rights of the Consuls.

What we have written here does not touch the claims of individual land-renters: that is another matter. We are distinctly of the opinion that there may be instances where compensation is fairly due. Improvements undertaken for the general good of a community often impose sacrifices on some of its members, and it is a universally acknowledged principle that such sacrifices should receive due consideration. There is, however, a peculiar feature of the Nagasaki question. It is that the land-holders obtained their lots originally without payment. The *Kobe Chronicle*, we observe, seems to labour under a false impression as to this point. It says:—"As the scheme would deprive Megasaki and Deshima of water frontage, the foreign holders of lots purchased at a higher rate than lots not having this superior situation, naturally object to being deprived of this advantage without compensation"; and again:—"The question is one of great importance to holders of property in the settlement of Kobe, for, if it is possible, without offering compensation, to make

back blocks of the lots at Nagasaki purchased at a higher price because possessing water frontage, the same thing can be done at Kobe." Our contemporary appears to think that the lots at Nagasaki were put up by the Government for public sale, as was the case with the lots in Kobe and Yokohama. That is a misconception. The Government has never received any payment for the Nagasaki lots. Since their original assignment, however, the Deshima and Megasaki lots may have changed hands at prices higher than back lots would have fetched, and on that account their holders may fairly claim compensation; not from the Government, indeed—it would be evidently unjust that the Government, having given away the lots in the first place, should now be required to disburse money on account of changes in their condition—but from the Local Authorities who, presumably, will come into possession of the land reclaimed by the filling. It seems to us to be eminently a case for arbitration.

THE RECENT POLITICAL CRISIS.

IT appears to us very remarkable that not one of the vernacular newspapers, in commenting on the recent political crisis, makes any allusion to the feature which to foreign eyes seems most prominent. The *Taiyo* (*Sun*), for example, has a cleverly constructed article, written in the pithy, *staccato* style now affected by the best Japanese journals. The gist of it is that the impossibility of any alliance between the political parties and the "clan statesmen" has now been emphatically demonstrated, and that the parties must henceforth work alone. "The Liberals," says our contemporary, "made a failure of their attempt to combine with the Choshu clansmen and the Progressionists were equally unsuccessful with the Satsuma. Of the Liberals, indeed, it may be said that they were remarkably inferior in ability to their official allies of Choshu origin, but nothing of the kind can be alleged in the case of the Progressionists and the Satsuma statesmen. A good many Satsuma statesmen would have to be rolled into one in order to obtain a Count OKUMA, and in the ranks of the Progressionists are many men whose abilities will bear comparison with the best representatives of officialdom. Hence the general inference to be drawn from the failure of both attempts is that an alliance between the clan statesmen and the parties is out of the question." The *Sun* goes on to predict that strenuous movements on the part of the Liberals and Progressionists may be looked for at an early date, and that the final fall of the clan statesmen can not be long deferred. All that appears to us to be a most superficial review of the situation. In the first place, the *Sun's* facts are erroneous. The alliance between the ITO Cabinet and the Liberals did not

prove a failure, as our contemporary alleges. It worked satisfactorily so long as it continued in existence. The motive of the Liberals in forming a union with the Ministry was to promote the introduction of the system of party government, and they carried that aim to the very verge of achievement. In fact, they may be said to have achieved it. For if their willingness to form such a union must be construed as a confession that without the aid of some of the *Meiji* statesmen their Party was not competent to assume the responsibilities of administration, the ITO Cabinet's consent to the union must be regarded as a confession that administration without the coöperation of the Diet was practically impossible. There has been no obscurity whatever about the object for which the political parties have contended since the opening of the Diet. They want party cabinets. At the outset, that is to say, before the promulgation of the Constitution, they fought for representative institutions, but when success had crowned that much of their programme, they found that the really desired sequel—namely, the control of State business by themselves—was not yet within reach, first, because the Constitution made the Ministers of the Crown independent of the Diet in so far as concerned tenure of office; and secondly, because the parties themselves were without a sufficiency of proved administrators to qualify them for taking charge of public affairs. The latter fact has long been appreciated by foreign observers. At the very commencement of the struggle, it was pointed out in these columns that affiliation of the *Meiji* statesmen with the political parties was an essential prelude to national recognition of the latter's administrative competence. The prestige of established ability to govern belongs solely to the *Meiji* statesmen. Their opponents may seek to bury the fact under a tumulus of invective; may labour to make the country forget what the *Meiji* statesmen have accomplished and remember only that they belong to a clique of clansmen. But the country can not forget. It is not necessary to wait for the verdict of history in the matter. We have the verdict of the world. The world has emphatically declared its opinion—an opinion based on incontrovertible facts—that the statesmen who planned the Restoration of 1867 and who have managed Japan's affairs ever since, steering her safely through immense difficulties and raising her from the rank of an insignificant Oriental State to the position of a respected unit in the comity of Occidental Powers, are administrators of high qualifications. It is out of the question that such men should be thrust aside by a set of politicians whose ability has been displayed solely in the field of agitation and destructive opposition, and of whose constructive and administrative

faculties the nation is without any proof. The people of Japan would forfeit all claim to the possession of practical common sense if they endorsed anything of that kind. Therefore the absorption of the *Meiji* statesmen into the ranks of the political parties is an indispensable preliminary to parliamentary cabinets. To the credit of the political parties it must be recorded that their leaders have always recognised the fact here set down; have always hitherto confessed themselves unprepared to assume the responsibilities of administration. To return, then, to the sequence of our original argument, we repeat that the Liberals, when they joined hands with the ITO Ministry, were intelligently pursuing the purpose of their existence as a party, and that Marquis ITO, when he accepted the alliance, was simply extending practical recognition to the principle theoretically recognised by him when he framed the Constitution, the principle that parliamentary government is the certain outcome of representative institutions. That an imperial mandate and a parliamentary endorsement would have to be converted, sooner or later, into a parliamentary mandate and an imperial endorsement, every Japanese statesman must be supposed to have understood since 1890, though all Japanese statesmen have properly deemed it their duty to postpone the change until preparations for it had been duly completed. The manner of the ITO Cabinet's fall constituted another triumph for the cause of party government. Marquis ITO might have remained in office had he chosen to sever his connection with the Liberals. By quitting office rather than adopt that alternative, he confirmed the principle which had induced him to form the connection. Thus far events had moved in excellent accord with the plans of the Liberals. It seemed as though the credit not only of inaugurating but also of consummating representative government would rest with them. They were now, however, to be subjected to a new kind of trial, a personal ordeal. The MATSUKATA Cabinet applied to them a solvent that destroyed their cohesion. They deliquesced, not wholly, indeed, but to such an extent that the solid residuum became comparatively insignificant. What, then, is to be the verdict about the Liberal Party? Are we to say, with the *Sun*, that its coalition with the Choshu statesmen failed because the clan character of the Choshu statesmen unfitted them for coalition with any political party? Of course not. We are to say that the Liberal Party has shown itself unable to remain compacted on any platform of principles. Its nucleus may be sound, but its tail is evidently subject to the influence of attractions not included in the calculations of conscientious administrators. We come, now, to the coalition between the Progressionists and the

MATSUKATA Ministry, which was equally a recognition of the principle of Parliamentary cabinets. Most of our readers doubtless remember that, in the very early days of the coalition, the Progressionists issued a circular which is probably unique as a public utterance by a political party towards the Ministry with which it is associated. We may be permitted to quote the comments which we ourselves published with reference to the circular exactly a year ago (November 26th, 1896):—

The Progressionists have issued an extraordinary circular saying that the Government has sinned so as to require sharp censure, but not beyond redemption; that it may be given a chance of doing better, and that the Central Office of the Party will endeavour to make the Cabinet "adopt such praiseworthy measures as shall atone for its fault." A strange document this, to be sure, when we recall the fact that, until a year ago, Japanese Cabinets asserted absolute independence of political parties and of parliamentary majorities, acknowledging responsibility to the Sovereign alone. Things move fast in Japan, but have they really moved so fast that a political party can openly arrogate the position of mentor to the Government, graciously promise support to the Ministers of the Crown if they behave well, and grandiloquently announce that steps shall be taken to make them atone for a blunder into which they have just fallen? The Progressionists must be presumed to know that the arrogant tactlessness of their proclamations can not fail to hamper the Government, and that alliances secured on such terms are too humiliating to be welcome. It seems to us that these politicians find much difficulty in reconciling their past intemperance with the exigencies of their new role as a constructive and disciplined party. Their long habit of independent and uncompromising opposition has impaired their faculty of subordination. They are furnishing now to the nation an object lesson in the difficulties of the system they clamour to introduce, for until parties learn to trust and follow their leaders, party cabinets are impossible.

Read by the light of recent events, these words may almost be called prophetic. For it was precisely on this rock of arrogant insubordination and tactlessness that the Progressionists finally wrecked their alliance with the Cabinet. They openly challenged the Premier to dismiss certain members of the Cabinet—"alien elements" (*ibunshi*), as they called them—, although compliance with such a demand would have amounted to an admission that Ministers of the Crown hold their portfolios, not even by the mandate of the Diet, but at the option of a political party not commanding a majority in the Diet. Politicians endued with so little sense of what is due to the dignity of their Ministerial associates, of the discipline without which such association is impossible, and even of the constitutional principle which they profess to uphold, can not be regarded as qualified for alliance with any Cabinet. The Progressionists needed some training to fit them for the position they aspired to occupy, and it is to be hoped that they will profit by their recent discipline. They have a great leader, abundance of talent and apparent cohesion, but until they learn that to discharge obligations enters into the role of an ally just as much as to exact concessions, they will not find many statesmen to court their alliance. We thus arrive at the conclusion that the lesson taught by the history of the past two years is, not the

unfitness of the "Clan Statesmen" for union with political parties, but the unpreparedness of political parties for alliance with the Clan Statesmen. Possibly this conclusion will elicit from our vernacular contemporaries the old comment that foreigners are not versed in Japanese affairs. Well, we admit the general truth of the comment but altogether deny its applicability in the present case. For what we have here before our eyes is, not the evolution of some intricate problem connected with Japanese customs or character, but Japan's attempts to assimilate a system which she borrows from us. We are justified, therefore, in claiming some accuracy for the impression produced on us by the performance.

YOKOHAMA'S NEW WATER SUPPLY.

(BY OUR OWN REPRESENTATIVE.)

The official opening of the new intake of the Yokohama Water Works at Koseto, Aoyama-mura, Tsukui-gun, took place on Sunday last, the 21st instant. Invitations to attend the ceremony were issued by Mr. Umeda Yoshinobu, Major of Yokohama to a number of gentlemen, engineers, etc., interested in the works and to representatives of the vernacular and foreign newspapers of Tokyo and Yokohama. In response to an invitation to the *Japan Mail*, I had the pleasure of taking part in the expedition. The invitation stated that the opening ceremony would take place at noon on Sunday, wet or fine. The weather on Friday certainly did not promise well for the following day, when the start had to be made for the scene of action; but contrary to general expectation Saturday broke clear and fine.

It was arranged in the invitations that guests from Yokohama should be met at Hachioji station by officials from the Yokohama Water Works during Saturday afternoon, these gentlemen leaving Yokohama at the early hour of 5.20. In company with several other guests from this port, I left Yokohama station at 8.47 for Shinagawa, where a change is made and the traveller proceeds by way of Meguro, Shibuya, Shinjuku, etc., to Hachioji. It is a wearisome journey for such a short distance. We left Shinagawa shortly after 10 a.m. in a composite train composed of gondola trucks loaded with bricks, and passenger cars, and travelling comparatively at a snail's pace. At Shinjuku there is a change and a long wait of an hour—of which nothing is said on the time tables—and it was not till 1.05 p.m. that our easy-going iron steed crawled into Hachioji station, the schedule time of its arrival being 12.25.

At a tea house just outside the entrance to the station, we found Mr. T. Kobayashi, Manager of the Yokohama Water Works, and acting on the occasion for the Superintendent, Mr. Goto Tsunetake, foreman of the plumbing department, and other officers of the Water Works Office. Mr. Kobayashi welcomed the visitors, requesting us to consider ourselves thenceforth the guests of the Mayor. The joint parties of visitors from Yokohama and Tokyo numbered over fifty before the afternoon expired. The greater portion of these were distributed among two or three hotels to stay over night at Hachioji, others preferring, after dinner, to proceed on by jinrikisha or *basha* to Arakawa-mura or Yamashita and spend the night at one of these villages. Our hosts courteously found quarters for the only other foreign guest, the representative of the *Japan Gazette*, and myself at the Karoya inn, a clean and newly erected *yadoya*, where we were served with an excellent dinner *a la Japonaise* and slept comfortably. During the afternoon, a stroll through the town served to while away the time and to gather some interesting notes. Hachioji is

situated near the centre of a level oval valley surrounded on all sides but the south-east by ranges of hills, rising at various points to the dignity of mountains. The town has a distinctly thriving appearance, and is the centre of a very considerable silk-producing district. The principal cultivation all around consists of mulberry plantations, in most of which either tea bushes or vegetables are grown between the lines of mulberry trees. The town consists mainly of one long street running from east to west, as broad as the Bund at Yokohama and lined on either side by large and well stocked stores and shops containing all descriptions of goods and produce, among which several of the silk yarn stores especially are large and prosperous looking. The town, however, has not long emerged from a disastrous fiery ordeal. For nearly half a mile the buildings lining the main thoroughfare, and the short cross streets, are all new, this part of the town—the most important—having been utterly destroyed by a great conflagration early last spring, while at a point where the destruction then ceased another fire occurred only a fortnight ago, and swept away over a hundred buildings. The carpenters are still busy putting up new erections, all, or almost all, of the same inflammable character, wooden clap-board and shingle roofs. After running for over a mile the main street gradually decreases in width and in the importance of the stores and houses bordering it, until it peters out into a country road lined with cottages and rustic dwellings, from which are heard the clatter of the silk-winding frames, and the whirl of the spinning wheel, with here and there a silk dyeing establishment on a small scale. The roads, as in most small towns in agricultural districts, are simply execrable, no attempt being made to metal them in any way—mud pure and simple, and hard or soft according to when the last rain fell.

Between 6 and 7 on Sunday morning we were up, and, in company with Mr. Kobayashi, Mr. Goto, and other officials of the Water Works, esconced ourselves, six in number, in one of those antediluvian shandrigans which used to be the pride of Odawara. Other members of the party had started earlier and were ahead of us. Our destination was Yamashita, about three *ri* distant, whence the passage of the Annaitoge pass was to be made on foot. We therefore started in the lightest marching order, leaving all impedimenta behind at the inn, it being understood that on Monday we should return the same way. This plan was, however, afterwards changed, as nobody felt disposed to cross the mountain a second time. The road followed to Yamashita is known as the silk road to Kofu, another sericultural centre, and was simply abysmal in its depth of mud, and frequency of holes, and it was no wonder that some little distance from Yamashita, our *basha*, drawn by a couple of scraggy country breds, came to grief, an iron bolt attaching the hind springs snapping at the strain put upon it when the wheel got into a rather deeper hole than usual. Leaving the dilapidated *basha* and its driver at a wayside rest-house, we walked on to Yamashita and thence started the ascent of Annaitoge about 8.30 a.m., most of the party donning *waraji* and carrying their boots in their hands—a wise precaution for those who can wear sandals with comfort. The first part of the ascent is of moderate incline, the path for a couple of miles or so winding around the bases of several outlying spurs, with mountain brooks gurgling on one side or the other, the foot-hills being mostly covered with dense brushwood, the haunt, years ago, of deer and wild boar. Of the latter, it is said, an occasional specimen is now and again seen, but the deer have been exterminated. After getting half-way up to the top of the pass, a beautiful scene was disclosed behind us—a glimpse of the valley of Hachioji as a background, framed, right and left, with successive mountain spurs, gradually decreasing in height, and set like the wings of stage scenery. But we had no time to linger over the prospect behind us; it was up, up, and still up, the ascent getting steeper and steeper as we advanced. The vegetation was

now confined to low undergrowth and grasses, the bare rock breaking through the soil here and there. At last, after a few short rests to recover our breath, the summit of the pass was reached, and a glorious prospect rewarded all for their exertions. To our left the view was blocked by the peak of Annai-toge, towering a thousand or so feet above the pass, while to the right the ridge curved round behind us, leaving in front a panorama of the valley of the Sagami-gawa, backed in the far distance by another range of purple mountains, while at the extreme right or upper end of the valley could be seen the white buildings of the pumping station at the old intake of the Water Works and the handsome new bridge over the Sagami river, our first destination. The first part of the descent, along a good pathway cut along the face of the mountain, was easy and enjoyable, but when nearing the Water Works station the path narrowed to a foot in width, and at a very steep grade ran along the verge of a deep gully, down which one false step or slip would hurl the pedestrian. Here the *waraji* shod climber had a great advantage over his booted companion, as the pathway was slippery after the rain of the previous Friday. However, with rather shaky knees and a feeling of intense relief—speaking for myself at all events—the valley level was reached without mishap and the bridge close by the pumping station crossed. The first signs of an unusual event in the neighbourhood were here observable, the bridge being decorated with festoons of flags, while at a little hamlet a short way beyond a triumphal arch of evergreens and flags had been erected in honour of the occasion. Almost opposite the pumping station of the old intake, the Doshi river, from whence the new supply is drawn, joins the Sagami-gawa, and the road to the new intake at Aoyama-mura runs over the newly laid pipes beside the river Doshi. Along this path our party, led by Mr. Kobayashi, proceeded for a distance of about one *ri*, arriving at the new station about noon. Here, at the entrance to the property of the Water-Works, was erected another triumphal arch, and the compound containing the quarters of the resident officials, just above the reservoirs, was dressed with garlands of flags, in the centre of the compound a large circular awning, or open marquee, being erected for the participants in the ceremony of opening the new works. On entering the compound the guests were received by Mr. Umeda Yoshinobu, Mayor of Yokohama, and afterwards served with liquid refreshments—and never was a glass of beer more welcome than it appeared to us weary pedestrians after our tramp of three hours or more over mountain and valley. Within the compound were assembled over two hundred guests, including most of the principal residents of Aoyama-mura and the surrounding villages. Amongst the visitors was Mr. Ishiguro Isoji, Director of the Engineering Division in the Home Department, who six years ago selected and recommended the site now adopted for the intake of the Yokohama water supply. About 12.30 p.m. all the guests assembled in the marquee, and Mr. Umeda Yoshinobu, Mayor of Yokohama, in a short address formally declared the new Works opened, and Mr. Asada Matashichi, Director, Mr. Kobayashi Tadayuki, Manager, Mr. Mita Zentaro, Chief Engineer, of the Water Works, and a gentleman representing the contractors concerned in the construction of the Works, all delivered speeches. After the conclusion of the proceedings refreshments were served to all the guests, while the people of the neighbourhood half a dozen *saké* tubs were burst open and a festive time generally was enjoyed, such as the rustics had probably never experienced before in their lives.

Mr. Kobayashi very kindly conducted the representatives of the press round the works, showing us where the protected intake pipe entered the Doshi-gawa, and its course to the two new reservoirs, one of which is sufficient for present use, but a second one has been constructed adjoining the first in view of a second main supply pipe which it is proposed

to lay in the course of a year or two. The advantages of the new supply over the old are manifold. To begin with, the elevation of the intake is 60 feet greater than the old, and the extra pressure thus obtained will obviate the necessity of using the pumping station, the working cost of which was \$15,000 per annum. The supply obtainable from the new source is also 50 percent more than from the former, while the water is considerably purer, the Doshi river passing through a very sparsely populated district, and springing from the north-eastern slope of Fuji. The work of construction of the new intake was commenced in October, 1895, but it was not till the following year that any great progress was made. The iron pipes used are of 18 inches diameter and are of Scotch make, 1,078 in number. They were supplied by Messrs. Takata & Co., while the ironwork of the bridges, etc., was supplied by Messrs. Jardine, Matheson & Co. The cement used in the reservoirs, etc., came from the Asano works. The ground purchased for the erection of the station and laying the pipes amounted to 29,553 *tsubo*. The total cost of the work has been 133,500 *yen*. The supply of water from the new source is 3,077,000 gallons per diem, the old intake yielding only 1,800,000 gallons.

Having inspected the works at the new intake at Koseto, Aoyama-mura, and lingered awhile to witness the festive enjoyment of the local inhabitants, my foreign fellow journalist and self started at about 2.30 p.m. with a guide kindly engaged for us by Mr. Kobayashi—who was staying over-night at the works—for the village of Nakano, where quarters had been arranged for us for the night. The road winds round the feet of numerous low hills, through mulberry plantations, and vegetable fields, with occasional fir groves and patches of wild, uncultivated land. All along the way we met parties of country people from the neighbouring villages and hamlets wending their way to Koseto to take part in the festivities, the girls and women in their best bibs and tuckers—or, I should say gayest *kimono* and *obi*—with newly dressed and flower-decked *chepelure*. All alike seemed to be in the highest spirits and had evidently given themselves up to a thorough enjoyment of the day's outing from start to finish. It is rare indeed in this rural district for such a celebration to come their way. After a walk of about three miles we reached Nakano, a long, straggling village, but containing the great desideratum to travellers, a couple of clean, comfortable, two storeyed *yadoya*. Both of these hosteries were occupied on Sunday night by visitors to the Water Works station. The one to which my fellow journalist and myself were consigned was known as the Naruse, and is situated near the entrance to the village. From a little verandah on the upper floor at the back of the house a fine view is obtained over the beautiful valley of the upper Sagami-gawa, backed by a high range of hills. Here we were served with dinner, or supper, of purely Japanese cuisine, washed down with libations of the Japan Brewery Company's product; and we retired to our *futon*s at an early hour, somewhat stiff and worn from the day's exertions. At 8 o'clock on Monday morning, after a breakfast of soup, eggs, and fried beef, we started, in company with Mr. Goto, of the Water Works, and a number of fellow guests, including the representatives of the *Boyski Shimbun* and *Chuo Shimbun*, on foot to the Mii ferry on the Sagami, where a boat was in waiting to convey us down the Sagami and Banyu rivers to Hiratsuka, a distance of about ten *ri*. The craft in which we embarked was a flat bottomed boat of about forty feet in length and six feet beam. Mats were spread on the planking of the boat, with blankets over them, for the passengers, who numbered nearly a score, to sit upon, while thick straw mats were arranged along the sides to prevent the splash of the rapids from drenching the occupants. Our crew consisted of two boatmen in the bows—one handling a bamboo pole to direct the head of the boat through the rocky channel, and the other working a very primitively constructed

oar, formed out of a rough bit of scantling with the outer end thinned down—and another man in the stern with a similar oar, used for steering purposes. At 9 o'clock we started on our voyage and almost at once entered upon a course of magnificent mountain and river scenery. The rushing, swirling stream turned and twisted in its course, here hemmed in by precipitous cliffs on either side, and there leaving two-thirds of its expanded channel a wide stretch of boulders, covered with water only when the river is in flood. Every few hundred yards the stream formed a rapid, through some of which only a narrow channel would be left between the rocks which strewn its course above or below water. In some places the boat, although only drawing a foot or so of water, bumped on the boulders underneath till it seemed as if her bottom would be forced up, but the boatmen knew their work and safely piloted the frail craft through the ever recurring difficulties and dangers. At one rapid, where the roaring waters were rather more boisterous in their behaviour than usual, a surging wave surmounted the matting guards above the gunwale and drenched some of the occupants of that side of the boat, the use of the baling ladle being requisitioned to clear the craft of the surplus intake of water. Every turn in the winding stream disclosed some new beauty; at one time in dark and lowering gorge, where the sun could only penetrate at its zenith, then again a richly wooded slope would open up, displaying all the rich tints of autumn woodland—firs of a dozen varieties, with gradations of colour from nearly black to a vivid green, the graceful feathery foliage of the bamboo, undergrowth dressed in a wealth of colouring in all shades of browns, orange and yellow, with here and there a dash of crimson from the maples. The scene indeed was of such beauty that it elicited an extempore poem of two lines from one of our vernacular journalistic representatives, which I hesitate to turn into English lest I should mar it. Such scenery with its accessories is indescribable, as Thomson says:—

Who can paint
Like Nature? Can imagination boast
Amid its gay creation, hues like hers?

We stopped for a minute at Arikawa, a village on the left bank, to pick up a member of our party who had gone on so far the previous night. He had put in the early morning fishing and had been rewarded by securing three *af*, a kind of carp, of about 4lb. each. These fish are sometimes obtained running up to 5 or 6lbs. in weight. They are almost the only fish of consequence found in the river, though it is an ideal stream for trout and salmon, and were the *salmo* tribe once introduced and effectually protected in the close season the river would soon prove a most valuable fishing property. Near Arikawa we passed a deep bend of the river where a few years since an unfortunate policeman met his death in the zealous pursuit of an escaped prisoner who took to the water. The policeman followed him, and carried down by the current, was drowned. A little below here we pass Oshime and after this the stream widens, being in some places over 70 yards wide, and the rapids grow rarer and rarer. Through still lovely, but less wild scenery, we continue. A little past Oshime, prettily perched on the hill side 60 feet above the river, is a branch station of the Water Works; then come Tama, Isobe, and a score of picturesque little hamlets, to Atsuki, where the Nakatsu river joins the Sagami and the united stream is thenceforth to its mouth known as the Banyu river. At Atsuki we stopped and tidied, re-embarking again at 2.30 p.m. for a point near Hiratsuka. The lower reaches of the river are not particularly interesting. One of our boatmen threw up his oar on the plea of a sore hand, and as the current here is not very rapid, it was tedious voyaging during the latter part of the afternoon. By a little after 5 p.m. however, we reached the Tokaido railway bridge over the Banyu, where we landed, and walked or rickshad it to the Hiratsuka station, about a mile away from the landing place, thence taking rail for Yokohama, where we arrived by 7.30. I can-

not speak too warmly of the kind solicitude shown by our hosts for the comfort of their foreign guests. The Japanese are proverbial for the thoroughness of their hospitality, and on this occasion, to use a well known English expression, "they did us well," every arrangement that was possible in a rural district for our comfort being made by Mr. Kobayashi and his genial lieutenant, Mr. Goto, and we have to thank them for affording us a very pleasant and interesting trip.

JAPANESE FACTS AND COMMENTS.

According to the *Mainichi*, the amalgamation of the Imperial Commercial Bank with the Japan Industrial Bank was concluded at the Imperial Hotel on the 17th instant.

The *Nippon* says that the Emperor is closely scrutinizing the estimates of the various Departments of State for next year, all outlays of over 10,000 *yen* having to be explained to him if any doubt attaches to the items.

The *Yomiuri* states that the import of foreign rice into Yokohama during last month amounted to 231,693 bags, valued at 729,823 *yen*. The amount imported at Kobe and Yokohama during the month of September was 266,622 bags, valued at 901,627 *yen*.

Mr. Teshima Seiichi, President of the Tokyo Technical School, has been appointed Director of the Common Education Affairs Bureau in the Educational Department. Professor Inouye Tetsujiro, of the Imperial University, has been promoted to the post of President of the Literature College.

The *Mainichi* states that out of 2,320 cards examined at the Silkworm Eggs Inspection Office in Tochigi prefecture from the 1st to the 10th of this month, 281 were passed, 1,283 were declared to be suitable for standard eggs, and 239 were rejected. Of 37,434 moths inspected, 3,078 were accepted, and 6,563 rejected.

The *Yomiuri* states that, on the 14th instant, several thousand *koku* of rice and beans were imported from Korea, at the port of Shimizu, in Shizuoka prefecture, for the first time since it was opened to trade. The importer was Mr. Yasuda, who has lived in Korea for some time where he engages in commercial enterprises.

The period of operation of the nine National Banks—92nd, 120th, 34th, 51st, 72nd, 87th, 95th, 109th, and 61st National Banks—will expire by the end of the year, and applications have been made by them to the Finance Department for a special charter to continue their business as joint stock corporations.

The silk market in Yokohama, remarks the *Nichi Nichi*, continues dull. On the 16th instant about 1,000 bales changed hands, but the demand was limited to purchases for immediate shipment. No large transactions having taken place of late, stock still remains at 1,900 bales. Buyers persist in forcing down prices, and sellers appear to have no power to resist the demands.

Sales of silk to foreign firms in Yokohama from June 1 to November 10 this year, as compared with the figures for the corresponding period of last year, were as follow:—30th year, 59,430 bales; 29th year, 32,756 bales; contracts broken, for the 30th year 9,188 bales; for the 29th year, 7,602 bales; settled in 1897, 48,507 bales; in 1896, 23,819 bales; amount under negotiation for 1897, 1,735 bales; for 1896, 1,334 bales.

Investigations completed at the Finance Department and published in the *Hochi* show that the foreign trade of Japan has steadily increased this year, the figures for the past ten months exceeding 309,171,566 *yen*. Last year the exports for the same period aggregated 90,852,732 *yen* in value, but this year the amount increased to 131,132,300 *yen*; while imports for this year amounted to 168,039,306 *yen*, against 143,473,519 *yen* for the previous year, making a total for

the two items of 234,326,311 *yen* and 309,171,506 *yen* respectively. Thus there was an increase of 74,845,195 *yen*, of which 40,279,468 *yen* were covered by exports and 34,395,120 *yen* by imports.

Along with the development of the foreign trade of Japan, the volume of business conducted at the various custom houses has also increased, and the Government, alleges the *Mainichi*, proposes augmenting the number of Inspectors and Appraisers, with a view to improving the general organization of the service. The expansion is to be carried out by the Finance Department in Yokohama, Nagasaki, Hakodate, Niigata, and Kobe, early next Spring.

A report from the Governor of Miyazaki, dated the 11th instant, and published in the *Yomiuri*, announces that in consequence of a strong gale and heavy rain on the 29th ultimo, the agricultural crops of the vicinity were seriously damaged, and in the districts of Morokata and Kozu, to the north of the prefecture, rice, millet, buckwheat, and cotton plantations were devastated to the extent of 1,000 *tan* (250 acres).

The tea market remains inactive. Orders, of course, have been received from time to time, but to no considerable extent and foreign firms are purchasing in small quantities only. On the 16th instant, 7,500 cattiees were sold to Messrs. Jardine, Matheson & Co. at 30 *yen* per picul, while another firm took delivery of 17,000 cattiees of inferior quality at 19.50 *yen*. Arrivals are reported to have amounted to 12,500 cattiees, and the stock aggregates 192,800 cattiees.

With regard to the raising of loans for the Osaka harbour, scheme the *Nichi Nichi* alleges that two parties were long in contention, one advocating a domestic loan and the other a foreign. The latter scheme, however, having been decided upon, negotiations were opened on the 18th instant with Messrs. Samuel Samuel & Co. who wired home at once. The loan is now competed for by capitalists in England, America, and France, and it is hard to determine which will get it.

Rumour says that before long some extraordinary changes will take place in the Osaka money market. Mr. Tanaka Ichibei, who holds more than 30,000 shares of the Osaka Mercantile Marine Company in the capacity of President, is now reported by the *Hochi* to have become insolvent. In wealth he was formerly a rival of Mr. Matsumoto Jutarō, who is also rumoured to be in a bad way. Mr. Tanaka is connected with Mr. Fujita Denzaburo in many extensive enterprises.

The *Osaka Asahi* states that of the amount of rice—89.53 tons—alleged to have been exported from Japan from November 1895 till October 1896, 65,054 tons was shipped in Kobe and the remaining 23,900 tons from Shimonoseki. Compared with the export for the previous year, a decrease of 28,574 tons is noticeable. On the other hand, the import of rice for the same period amounted to 172,076 tons (including Korean cereals), showing an increase of 142,353 tons over the previous year.

The *Yoroku* reports that the Bank of Japan has resolved to issue a loan of 800,000 *yen* to Mr. Matsumoto, and another of 500,000 *yen* to Mr. Tanaka, in Osaka, to prevent them from becoming insolvent. The bankruptcy of these two merchants would certainly create a panic in Osaka and lead to an utter disorganization of many important industries. In view of these facts Count Matsukata, the Premier, has personally taken the trouble to persuade Baron Iwasaki to save Osaka from its imminent peril.

The *Nippon* states that the number of mines in Hokkaido now being worked exceed 500, and when these are added to the mines with respect to which applications have been forwarded to the Government for trial working or for a lease of mining rights the aggregate is from 800 to 900. Of these mines, coal, sulphur, and gold-dust are

known to yield the largest returns. Ishikari is noted for the production of coal, while Kushiro, Iburi, Oshima, and Chishima are renowned for their abundant supply of sulphur. It is said that all the rivers in Hokkaido produce more or less gold dust.

The *Mainichi* states that certain citizens of Seoul have applied to the Korean Finance Department for permission to organise a Rice Monopoly Company with a capital of 1,300,000 *yen*, the object being to prevent the export of rice to other countries. It is said that the project is supported by Russians, and Cho, Minister of Finance, is reported to have eagerly approved of it.

Very frequently have we heard, laments the *Yoroku*, the bitter wail that Japanese Legations abroad are seriously embarrassed in consequence of the inadequate funds provided for their support. The Legation in Korea seems to be a great sufferer, being sometimes unable to discharge its bills at the buckwheat shops. Now that Russia is attempting to secure suzerainty over the whole kingdom, the Japanese Legation is overwhelmed with humiliation by its poverty. Its failure in diplomacy is therefore quite natural and inevitable.

According to the *Nippon*, Japanese residents in Seoul during last month totalled 1,913, of whom 1,131 were males and 776 females. They constituted 473 families, showing an increase of 12 families but a decrease of 61 persons as compared with the previous month. The Japanese population of Wonsan during last month was 1,480, constituting 329 families, consisting of 940 men and 540 women. The figures show an increase of 3 families but a decrease of 50 residents as compared with the previous month.

The price of cotton, which once reached 24 *yen*, has fallen to 19 *yen* in consequence of the unusually abundant crop in America this year. Japanese dealers, in the expectation that such a figure will be the lowest possible quotation for the staple, have sent orders to America which are supposed to have amounted to 1,500,000 kilogrammes. The cotton is expected to arrive in January next and the consignees are engaged in providing themselves with funds to pay for it. Various Spinning Companies are endeavouring to draw bills payable three or four months after the delivery of the cotton, in order to reap a larger profit.

Japan's trade with Korea, alleges the *Mainichi*, is in such a condition that imports are considerably in excess of exports, and vast amounts of silver *yen* are being conveyed beyond sea. The Inchon branch of the First National Bank, which now enjoys great influence in Korea as a medium for the circulation of money, received from Japan a sum of 30,000 stamped *yen* at the end of last month and 100,000 *yen* at a later date. It is reported that the steamer *Genkai Maru*, which left Kobe on the 12th instant, conveyed stamped silver to the amount of 150,000 *yen* for Inchon and Fusan. The great inequality in the balance of trade between Japan and Korea at present is ascribed to the abundance of the rice crop in the latter and the abnormal rise in the cost of cereals in the former country.

The expansion of the currency and the scarcity of capital for various enterprises are, according to the *Nichi Nichi*, the two most prominent economical facts at present. In order to meet immediate demands, the Government has granted the Bank of Japan a charter to issue an extra quantity of notes to the amount of 30 million *yen*. Economic circles, however, are presenting abnormal features and the Bank of Japan can hardly expect its loans to be repaid within this year or even by next Spring. Under the circumstances the Bank, perceiving the necessity of increasing its reserve securities, has taken further steps and the loans will now have to be secured by public loan bonds and other appreciable debentures.

Investigations carried out by the Daijima Rice Exchange and published in the *Tokyo Asahi*, show that the stock of domestic rice in Osaka

amounted, on the 15th instant, to 7,145 *koku*, indicating a decrease of 26,267 *koku* as compared with the figures for the previous month. Korean and Chinese cereals aggregated 19,743 *koku*, a decrease of 8,466 *koku* from the previous month. Such insignificant stocks have seldom been recorded in the annals of Osaka. Cleaned rice is now quoted at 17 *sen* per *sho*, and prices are steadily rising. The respective stocks for the past five years were as follows:—In November, 1893,—domestic rice 109,934 *koku*, foreign cereals, 8,166 *koku*; in 1894,—domestic rice 38,936 *koku*, foreign rice 4,196 *koku*; in 1895,—186,756 and 50,955 *koku* respectively; in 1896, 295,461 and 40,283 *koku*; in 1897, 7,145 and 19,743 *koku*.

The foreign trade of Japan during October, as investigated by the Finance Department and published in the *Yomiuri*, was as follows:—Export of dutiable articles, 11,007,146 *yen*; import, 12,995,057 *yen*; duty-free goods exported, 6,631,663 *yen*; imported, 7,529,391 *yen*; shipbuilding materials exported, 355,167 *yen*; imported, none; total exports, 17,995,977 *yen*, imports, 20,524,449 *yen*. The excess of imports thus amounted to 2,530,471 *yen*, while imports and exports together make a total of 38,518,426 *yen*. These figures, as classified according to ports of export and import, are as follows:—Yokohama, exports, 11,696,822 *yen*; imports, 8,834,142 *yen*; Kobe, exports, 4,277,186 *yen*; imports, 9,712,323 *yen*; Osaka, exports, 401,657 *yen*; imports, 409,329 *yen*; Nagasaki, 500,488 *yen* and 1,125,801 *yen* for the two items respectively; Hakodate, 130,784 *yen* and 97,853 *yen* for the same; other ports, 987,038 *yen* for exports and 344,998 *yen* for imports.

Month by month the money market grows most stringent, and considerable anxiety is entertained by the public, remarks the *Tokyo Asahi*. Balances of various banks in the capital compared with those for the previous month, give the following results:—

	Nov.	Oct.	Increase or decrease.
Yen.	Yen.	Yen.	Yen.
Fixed Deposits	18,334,622	18,523,088	— 188,466
Current account	21,651,664	22,251,215	— 599,551
Savings' deposits	11,886,145	12,224,451	— 338,306
Other deposits	11,102,305	12,033,680	— 931,375
Total	62,974,736	65,032,434	— 2,057,698
Loans issued	37,552,452	37,792,588	— 239,135
Over-drafts	20,322,710	19,104,495	+ 1,218,215
Discounts	27,585,029	26,527,345	+ 1,057,683
Total ...	85,461,192	83,424,428	+ 2,036,763

Thus a decrease of 2,050,000 *yen* is noticeable in deposits, but loans and over-drafts have increased by 2,036,000 *yen* over the previous month.

Since the Cabinet decided to resort to increased taxation to supply the deficit in the revenue, the Finance Department has been busily engaged in investigating the best scheme to be followed for carrying out the project. After making various experiments, the Department is now reported by the *Chuo* to have adopted a programme destined in its nature to mislead the farmers ignorant of arithmetic. The value of rice was fixed at four *yen* per *koku* at the time when the Land-tax Regulations were first promulgated; it will now be increased to eight *yen* by taking the average for the past five years. On this basis the land is to be reassessed, and 10% of the value will be levied as tax. The scheme, therefore, will have the effect of imposing 10% instead of 5% as heretofore, realizing 9 million *yen* on the whole. This, together with the increased *Sake* tax amounting to 10 million *yen*, will still be found insufficient to cover the deficit of 24 millions in the revenue. Thus further temporising schemes will be necessary, asserts the *Chuo*.

The *Shogyo* asserts that the Head Telephone Office in Tokyo and its branch in Osaka have resolved to increase their lines in 1,500 places within the present fiscal year, that is to say, up

till March next. New applicants for telephonic communication are reported to have reached 7,000, and the new lines will still leave 5,500 without communication. It is a pity that the Telephone Bureau's resources do not allow of the whole of the work being undertaken within this year. Moreover, materials are deficient, and it often happens that contractors for various appliances request the postponement of the period of construction owing to their failure to complete contract work within the time originally fixed. The work of laying subterranean lines in the vicinity of the Naniwa Office has already commenced. To outside observers the progress of the work may seem extremely slow, but no better scheme exists at present. The present telephones, consisting of but single lines, are often found to convey several voices at the same time, much confusion thus arising. In order to get rid of these annoyances a double line system is to be adopted for the new telephones.

At the welcome meeting extended by the citizens of Osaka to Mr. Takano, the ex-Chief Judge spoke as follows:—"I had scarcely time to consider my personal inclinations when I found it absolutely necessary to make a strong protest against the procedure of the Government. Men in my position are generally avoided even by old acquaintances. I can therefore find no words sufficiently expressive of the thanks I wish to extend to those who have so spontaneously come to my side and of the kindness shown me, contrary to the common experience of the world. But the thanks I offer you are tinged with the sincerity that wells from the bottom of my heart. That Formosa does come within the purview of the Imperial Constitution can be proved by a single fact—the island was transferred to Japan through the Shimomoseki treaty, which was concluded in accordance with the Constitution by Commissioners specially appointed. When I was nominated to the post of Chief Justice of Formosa I represented to the Cabinet that if the Government were disposed to render the Constitution inoperative in Formosa, steps should be taken to issue an Imperial Ordinance to that effect. But no measure of the kind was adopted. The budget for Formosa requires the approval of the Diet. This, too, shows that the Constitution is enforced in Formosa. Suddenly, however, the Cabinet placed me on the retired list. The independence of the judiciary was thus taken away and the lives and properties of the people were exposed to the utmost danger. How could I hold my tongue? I addressed enquiries on these subjects to the Premier and to the Minister of Justice, but failed to obtain any satisfactory or reasonable answer. No alternative was left me but to return the notice of dismissal to the Cabinet with a strong protest, and to resume my post by returning to Formosa. Unfortunately, however, I was driven from my post by force. Yet brute force does not determine questions of reason. It is my firm conviction, and I do not hesitate to affirm it, that I am still Chief Justice of the Formosa High Court. The necessity of maintaining the independence of the judiciary is felt, not only in the case of ordinary thieves and robbers, but in dealing with men of rank and wealth. The first scandalous case that has arisen in Formosa is now to be passed on to the High Court for trial, and it is for this reason that an attempt was made by the Government to remove me from the post, so that executive officers might be enabled to receive sentence from a judge with whom they have special relations. If the judiciary is to be disregarded in this way, how can justice be expected in Formosa?

That the "mother-in-law" terror still exists in our second-rate comic papers and music hall songs shows how far we are behind the Abyssinians, says a London daily. Among this people no mother is allowed to visit her married daughter until a year after marriage; nor is it good taste to unduly prolong a visit even then. And these are the people we have looked upon as savages.

FIRE ON YATOZAKA.

About a quarter past four a.m. on Thursday, fire broke out in a house, No. 2, Motomachi Ichome, in the village on Yatozaka (Camp Hill), almost opposite the entrance to Dr. Wheeler's residence. A party of men from the Yokohama Fire Brigade, under Superintendent Morgan, with hose reel and stand-pipe, were promptly on the scene, as well as a detachment of Police firemen. A hydrant in the road at the back of the village afforded a good supply of water, and though it was impossible to confine the fire to the house in which it originated—occupied by a harness-maker named Ohara Nisaburo—the spread of the flames was arrested and the fire extinguished with the loss of five houses destroyed, and one or two slightly damaged. It is only about five years since the village was entirely swept away by fire, and as might be expected there was on the present occasion great excitement among the inhabitants who, during the continuance of the fire, were rushing about, removing their furniture and effects to places of safety, the grounds of Dr. Wheeler's residence being selected as the depository for a considerable proportion of the *penates* of the villagers. By about a quarter past five the fire was extinguished. Its origin has not been ascertained, but is believed to have been accidental.

CARRIAGE ACCIDENT TO THE ENGLISH JUDGE.

Mr. Justice Wilkinson and his Chief Clerk, Mr. C. D. Moss, had an exciting time on Sunday. His Honour was driving into town from Negishi with Mr. Moss—to meet his Excellency Sir Ernest Satow—when the horse attached to the brougham took matters into his own charge and bolted down Jizo-zaka. The bridge at the bottom of this steep descent momentarily checked the furious career of the vehicle, at the expense of the lamp and step, and soon after the animal was pulled-up. We understand, from a pedestrian who witnessed the affair, that all through the trying escapade His Honour's judicial calm was undisturbed and he presented his usual dignified, unruffled front when the wild ride terminated. His Chief Clerk also deserves our congratulations on a similar score.

BEHRING SEA.

Here is some further matter showing what the leading American journals themselves think about Great Britain's action in the Behring Sea business:—

(FROM "THE TIMES" CORRESPONDENT.)

New York, Oct. 8.

England's course with reference to the Behring Sea Conference continues to excite comment which, if not always instructive, is seldom lacking in moderation. The *New York Tribune*, like so many other journals, thinks that Canada, "the spoiled child of diplomacy," had to be "placated and humoured," but concedes that Great Britain, while taking the cue from Ottawa, "has acted entirely within its rights and in good faith." The *Herald* after referring to Lord Salisbury's Note of July 28 as expressly stipulating that only England, Canada, and the United States should take part in the conference, remarks:—

"Mr. Foster, who runs the United States Government on the Behring Sea question, has ever since been pressing for the inclusion of Japan and Russia. Lord Salisbury declined. He stands by the conference to which he agreed. That he is prepared to enter. In what sense is this a 'withdrawal'?"

With equal good temper the leading journals accept the prediction cabled from London that the British Government will shortly reject Senator Wolcott's bimetallic proposals. "India appears to be the controlling power on this question, as Canada was with regard to the destruction of seals," says the *Tribune*. The United States, thinks the same journal, having large payments to receive for food and cotton, will profit by the continuance of the gold standard. This view may not help Senator Wolcott, but then few Americans really expected his mission to succeed.

THE RICE CROP.

Reports from the various prefectures received by the Agricultural and Commercial Department and published in the *Nippon*, show that the estimated rice crop this year, as compared with the figures in ordinary years, is as follows, only districts producing more than one million *koku* being mentioned:—

	Estimated crop for this year, <i>koku</i> .	Crop for ordinary years, <i>koku</i> .	Increase or Decrease, per cent.
Osaka	1,018,509.....	1,018,509.....	—
Hyogo	1,651,912.....	1,651,912.....	—
Niigata	1,408,274.....	2,362,892.....	-40.4
Chiba	1,070,358.....	1,427,144.....	-25
Ibaraki	1,222,940.....	1,222,940.....	—
Aichi	1,500,000.....	1,283,860.....	+16.8
Shiga	1,192,144.....	1,083,767.....	+10

IMPERIAL ORDINANCE No. 411.

Regulations for the Formosan Council embodied in Imperial Ordinance No. 89 of the 29th year of *Meiji* are hereby revised as follows:—

Art. I.—In the Formosan Government Office shall be established a Council consisting of the following members:—Governor-General, Superintendent of the Civil Administration Bureau, Superintendent of the Finance Bureau, Chief of the Military Staff; Chief of the Naval Staff; Commissioners, less than six in number; Councillors. The Governor-General may, if he deems it necessary, order other civil, military, or naval officers connected with affairs introduced for deliberation, to attend the meetings, provided that the same are excluded from voting.

Commissioners required to attend the Council shall be selected in accordance with rules established by the Governor-General.

Art. V.—No debate shall be held unless more than half the members are present.

NEWS OF THE WEEK.

A Havas telegram, dated 2nd November, states that 3 000 butchers' labourers employed in the abattoirs of Paris have gone on strike.

In a recent issue, the Nagasaki paper stated that, owing to ill health, Mr. St. Gabriel had been obliged to resign his position in the Russo-Chinese Bank at that port. It is now informed that this is not the case and that Mr. St. Gabriel is simply leaving Nagasaki.

An order for a new first-class armoured cruiser was signed in October by M. Kurino, the Japanese Minister in Paris, in favour of the Société des Forges et Chantiers de la Loire. The vessel will be of 9,400 tons and 17,000 horse-power, and is designed for a speed of twenty knots an hour.

While the Japanese coal-trade is languishing in consequence of inflated prices, the Hongay mines are finding that demand exceeds supply. In September about 24,000 tons were exported, and down to the 22nd of October the export for that month was over 14 000 tons. The management has had to draw upon its reserves to fill orders.

A native dairy at Shanghai has issued the following amusing advertisement:—We open at Woo-sung in the south of the Telegraph Co., for sale the foreign Milk, the taste are sweet, the milk are pure, and the price are just. We haven't put any water in it, if examine out, won't pay a single cash. If you want to buy so you will know the Foreign Cows chop.

Professor Heydeck, of Königsberg, has discovered graves of the seventh and eighth centuries, evidently of Scandinavian origin, in East Prussia. In one he found a silver pommeled cross-hilted sword, a pair of stirrups, two lances, one of them with silver ornaments, an iron shield

boss, three spurs, a pair of scissors, a grindstone, and the remnants of an iron pail. In others were found two oval dishes richly ornamented, a third of a form hitherto unknown, bronze bells like sledge-bells, and sundry other articles.

Mr. J. D. Humphreys, of Hongkong, has died at Folkestone, news of his death reaching the Colony by cable. He arrived in Hongkong in 1867 and began as book-keeper for the firm of A. S. Watson & Co., chemists, of which he afterwards became sole proprietor, before turning it into a limited liability company. He was sixty-one years of age.

Mr. Aug. Evers, representing the firm of Messrs. Simon, Evers & Co., agents for the Kingsin Line, has instituted, says the *Kobe Chronicle*, an action in the Osaka District Court against Mr. Hirome Nisaburo, owner of the *Pedo Maru*, claiming 20,000 yen damages for injuries received by the D.D.R. steamer *Gerda* during the collision at Moji on the 24th ult.

Poor Hamlet has had much to bear. Everyone who has essayed the part has thought a new reading necessary. The latest reading is that of Sarah Bernhardt, who has discovered that Hamlet had more in him of the woman than the man. Now we only want someone to discover that Ophelia had more of the man in her than the woman, and Shakespeare will stand properly corrected.

The seventh concert of the Tonic Sol-fa Juvenile Choral Society of Yokohama is to be given at the Public Hall on the evening of Friday, the 10th December, for the benefit of the Society. The programme is a full and varied one, and includes, besides numerous songs, choruses and instrumental pieces, a Cantata entitled "Queen, I love-You's Five o'clock Tea," the title rôle being taken by Miss Hilda Watson.

"Millions now and millions yet to come," we are told by the *Daily Telegraph*, will bless the ingenuity of the late Mr. Pullman. As a fact, the ingenuity of Mr. Pullman has already been blessed by millions, and will be blessed by "millions yet to come"—of dollars. The gratitude of posterity is valuable, of course, but for an inventor it must be still more pleasant to enjoy the solid fruits of his ingenuity in his lifetime.

In H.B.M.'s Consular Court at Kobe on Friday, before Mr. Playfair, acting-Judge, sitting with Messrs. A. L. Robinson and W. Styles, Associates, Richard Reynolds, an A. B. on the British ship *Claverdon*, was found guilty of stabbing and wounding John McGrath, a seaman on the same ship, on the 5th inst. He received a sentence of six weeks' imprisonment. Mr. J. Twysel Wawm acted as Crown Prosecutor.

Writing on November 11, the *Hongkong Telegraph* said:—An accident which might have resulted in loss of life occurred in the harbour yesterday evening. One of the *Undaunted's* boats, while going off to the ship, was run into and badly damaged by a steam launch from the Naval Yard. The midshipman in charge of the boat, Mr. Bate, was knocked overboard and the boat was swamped. The crew of the boat were taken to their ship by the launch which had been the cause of all the trouble, and after a change of clothes, they were none the worse for their adventure.

The following curious paragraph is translated by the *Hongkong Daily Press* from *L'Avenir du Tonkin* of the 3rd November:—"An English naturalist has just explored an island of Oceania still almost unknown, Christmas, which contains but one European inhabitant with his family and a dozen native labourers, originally from the Cocos Islands. Is it necessary to say that this island figures in the list of English possessions? If the French flag was floating there one would have found besides the single inhabitant, policemen to guard him. Magistrates to punish him, a prison, a residence, a Governor, etc., etc., and an official

journal, which, like the one of Indo-China, would have already published six or seven thousand Metropolitan laws promulgated in the new colony."

Mudie's Library took two hundred copies of Lord Tennyson's *Memoirs* of his distinguished father—an order of some magnitude, seeing that the work consists of two large and expensive volumes.

Since the break-up of the petroleum ring at Sourabaya, the price of that oil there has fallen. The decline is expected to continue from competition between two Chinese oil syndicates which strive to cut each other out.

The total "paid up" capital invested in British Railways at the close of last year was 1,029.5 millions, of which more than 10 per cent. is simply nominal, consisting of additions made in the conversion, consolidation, or division of stocks.

His Holiness the Pope has instituted an Order of St. Sulpice, and this confraternity has been charged with the conversion of England to Catholicism. Cardinal Vaughan, Archbishop of Westminster, states that the conversions in England to the Catholic Church now average 700 per month.

Another gang robbery on a large scale is reported in the Hongkong papers. It occurred about 9.30 o'clock on the night of Nov. 16th, when six armed men entered a jeweller's shop in Burd Street. They shot one of the occupants dead and after robbing the place of \$500 worth of jewellery made good their escape.

Mr. A. M. Bisbee, Coast Inspector, issues the following Notice to Mariners, No. 314, for the Yangtze River—Kiukiang District of the China Sea—Fitzroy Island Beacon Light:—Notice is hereby given that the Fitzroy Island Beacon Light has been shifted 210 yards 67° E. from its last position, in consequence of the washing away of the river bank.

A game of hockey was played on Thursday on the Cricket-ground, the teams, though incomplete, comprising several ladies. Some interesting play took place, the red team having the best of it. Among the players were Mrs. Mitchell, Mrs. James, Miss McKaye, Mrs. Hyde Pearson, Mrs. Bevis, Mrs. McWilliams, and Messrs. Brockelbank, Pinckney, James, White, Gibbons and Coghill Jackson.

Any stick, remarks the *St. James's Gazette*, is good enough to beat the Turks with. A horrible atrocity was narrated in the Turcophobe papers the other day. Mr. John Burns's married sister keeps a hotel in Constantinople, and she was savagely attacked by her man servant. He seized her, forced her down, tied her wrists, and nearly gouged out her eyes, and compelled her to give him all the money in her purse. "The *Chronicle* thinks that 'this is what British subjects have to look for nowadays in Constantinople.' The only comment we have to make is that this rascally man-servant was—a Greek.

One of the men who make up the calendars used as advertisements has evolved a few simple rules to facilitate the process. They are:—No century can begin on Wednesday, Friday or Sunday. The same calendars can be used every twenty years. October always begins on the same day of the week as January, April as July, September as December. February, March and November begin on the same days. May, June and August always begin on different days from each other and every other month in the year. The first and last days of the year are always the same. These rules do not apply to leap year when the comparison is between days before and after February 29.

A recent invention for further increasing the safety of a vessel, says the *N.Y. Maritime Register*, consists in making the hatches of such a strength that they will form, for all pressure-resisting purposes, an integral of the new universal iron deck, and thus, when a compartment is pierced, the inrush of water will not be

able to blow off the hatches, as was invariably the case with the wooden ones. In this way, each deck forms a horizontal bulkhead and thereby greatly increases the subdivision. For instance, a vessel with the ordinary construction of three decks and eight bulk-heads would, with wooden hatches, have only nine water-tight compartments, a figure which is increased to twenty-five compartments if fitted with water-tight decks. The hatches slide close up under the deck beams and are secured by very simple means, which cannot be misplaced.

A protest has been entered at Labuan by the master of the steamer *Libelle* to the effect that while on a voyage from Kudat to Labuan and Singapore, on the 9th October, in lat. 5 deg. 18½ min. N. and long. 115 deg. 17 min. E. (approximate) the ship passed over a sand bank not marked on the chart and on sounding found 12 ft. of water on the bank. The ship's way was not stopped.

The *Bangkok Times* hears from Chantaboon that a French protectorate has been proclaimed there. To give a semblance of reality to this protectorate, French soldiers are put on guard in the market, although there does not appear to be any necessity for this display of force, as the town is perfectly quiet. It is reported that other steps are to be taken to the same end. It is said that several tribunals are to be established in which French officers are to take part in the investigation of cases.

What a credulous world it is after all. The *Globe* gravely announces that at the present time the idea prevails among a number of Russian soldiers and moujiks that General Skobelev, the hero of Shipka, is not really dead. According to the story, it was not the General, but a soldier resembling him, who was buried. Skobelev is thought to be living incognito in France, and those who believe in the legend say that he is ready to re-appear when his country shall have need of his sword. It is implicitly believed that the General had a hand in the Chino-Japanese War, commanding a Japanese regiment under a false name. His return was announced at Wladkavkas a few days ago, and a crowd of peasants gathered at the railway station. But Skobelev did not appear, and the moujiks went away disappointed, confident that he would assuredly return some day.

The following telegrams appear in Australian exchanges:—

London, 16th October.

One thousand boiler-makers in London have struck work in consequence of the decision of the employers to revert to the nine-hour day, but the union has refused to grant the men strike pay on account of their having repudiated the settlement arrived at between the shipbuilders and the engineering employers, in which the boiler-makers were concerned.

London, 18th October.

The boiler-makers in London, who to the number of 1,000 struck in consequence of the nine-hour day, have been ordered by the executive of their union to return to work, they having repudiated the settlement arrived at between the shipbuilding engineering employers and their workmen.

London, 20th October.

Contributions have been received from the Continent of Europe to the amount of £2,400 in aid of the engineers on strike in Great Britain.

Canon H. Scott-Holland, of St. Paul's, has published a letter, in which he declares that mediation through the Government in connection with the engineering strike is now morally obligatory.

L'Avenir du Tonkin of the 6th instant gives a long account of the burning of the river boat *Phénix*, running between Haiphong and Hanoi and owned by the Messageries Fluviales. It appears that at 8 p.m. on the 3rd instant, the *Phénix*, which had on board four first-class, two second-class, and about sixty deck passengers, and was laden with forty tons of general merchandise, had just left Lach-tray, when an alarm of fire was given, and in less than a minute's time the boat was enveloped in flames. The cause of the fire, as explained by a native eye witness, was that among the cargo on deck were 39 barrels of oil and about ten or twelve packages containing several hundreds of native palm leaf hats. A few drops of the oil leaked out of one of the barrels, and an Annamite, after

having lighted his pipe threw a burning match upon this oil. The oil instantly caught fire and the flames spread to anything that was inflammable on board. In one hour, only the blackened steel hull of the *Phénix* remained. Only three natives were reported missing, and of this number two were children.

The result of last year's census of mechanics and working people in the German Empire shows that there are over 1,000,000 persons employed in the textile industry alone. The exact number is 1,017,112, comprising males and females. In the census of 1882, 932,592 persons were enumerated. Since 1882 the fact may be of interest, says the United States Consul at Glauchau, that there has been a decrease in the number of male employés from 582,070 to 552,230, a reduction of 29,840. Their places have been filled by females, whose number has increased from 350,522 to 465,316 in the same space of time, showing that the textile industry is especially adapted to women, who appear to be neglecting all other branches of labour, particularly that of domestic service, to go into the factories. As a proof of the development of the German textile industry during the last thirteen years, it may be stated that in 1882 410,370 tons of raw material were imported for working up in this branch of trade in Germany, and in 1896 the figures reached 808,300 tons.

In the *Courrier d'Haiphong* of the 4th November the *Daily Press* finds the following:—Three missions of French engineers, of which one is already on its way, will shortly arrive in Tonkin. The one that has already left France is sent by the home Government to study the routes of penetration into China, that is to say, the railway routes of China that could be connected with those of Tonkin. Mr. Feer, chancellor of the Consulate at Szemao, has been appointed to act as interpreter to the engineers who compose the mission. As to the other two missions, one will be sent by the Government and the other by a syndicate to report on routes for railways in Indo-China. For the first two, for which the mandate is official, the cost has been estimated at 100,000 francs. This sum not being convenient to find, and the Government not wishing to expose itself to a check before the Chambers, it has been thought advisable to obtain it from the Government of Indo-China, which has, however, refused to bear any part of the charge. The Ministers for the Colonies and Foreign Affairs have probably provided the cost of the mission which has already left Marseilles; but what will happen to the other two?

A letter from Mr. W. B. Walter, Chairman of the Yokohama Chamber of Commerce, regarding the Silk Export Bounty, under date, Yokohama Sept. 9th, appears in the *London and China Express*. He says:—

SIR,—I have now the pleasure to inform you that it is expected the Japanese Government will at the next meeting of the Diet, in December next, introduce a Bill to abolish this Bounty.

Should this prove correct, it will be in great measure due to the active interest taken by the various European and Eastern Chambers of Commerce and the China Association, and the Committee of this Chamber desire to express their thanks for the support of your body in a question of such great mutual importance.

We do not agree with Mr. Walter in his inference. The sweeping and almost unanimous opposition of the Japanese press and the assumption of the portfolio of Agriculture and Commerce by Count Okuma, were, in our opinion, the chief, if not the only, reasons for the Government's abstinence from putting the measure into operation, and for the step to which Mr. Walter alludes as now likely to be taken.

What little news is permitted to filter through private sources from Manila, remarks the *China Mail*, seems to be entirely different from the official accounts. It is usually asserted that the insurrection has been finished for a long time, and that the rebels have degenerated into scattered bands of marauders, who descend upon innocent villages and act like villainous

bandits. Private advices, dated 6th November, remark casually that the steam tram to Malabon was "stuck up" last Sunday evening, and a spy was taken prisoner. Business was as dull as ditch-water, and in eight provinces around Manila, things are stated to be still pretty much in the hands of the rebels. It was believed, however, that the people would be allowed to cut their paddy, but if the rebels meet with any more instances of the alleged cruelty and excesses laid at the doors of the hated cazadores, the crops were to be burnt *en bloc*, by order of the rebel leader, Emilio Aguinaldo. There has been a goodly amount of fighting, but the newspapers are silent. We give these statements for what they are worth, with the remark that the so-called rebellion in the Philippines cannot be put down or anything like it, if there be truth in what is stated above. The burning of the crops, however, would be an act of vandalism.

Writing on the "Evangelisation of Japan" in the *Intelligencer*, Archdeacon Warren, after pointing out the great strides of the *Méiji* era and what has been done towards Christianising the Japanese; writes:—No doubt experiences vary in different parts of the country, according to the temper of the people and the circumstances of the districts, but missionaries generally will agree that the opportunities for public preaching as well as for individual work, for special efforts amongst students, factory hands, policemen, and soldiers, for evangelistic meetings for women and children, were never more numerous or more favourable. The recent visit of Mr. J. R. Mott has led to the formation of small Christian Associations in Government as well as in Mission schools, which will keep Christian students in touch with each other, and open the way for special evangelistic efforts amongst their non-Christian fellows. Such efforts as those made by Miss Hamilton and Mr. Matsuda—the head-teacher of the Bishop Poole Girls' School—to reach the members of the Osaka Police force, which have resulted in eight or more conversions in a few months; and the work in the naval and military hospitals at Kure and Hiroshima, that amongst the factory girls in Fukuyama, and that again amongst the crews and passengers of the Osaka steamboats, all of which also have resulted in fruit unto salvation, are evidences of the fact that this is a day of opportunity.

CORRESPONDENCE.

THE SOCIAL QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read your remarks in your issue of to-day relative to the "Social Question."

Without entering into discussion connected with the subject of Col. Bacon's remarks, or with your own views upon them, I strongly protest against your repeated assertions concerning the streets of England after night-fall, which would lead one to think that they were full of depraved women.

Two years ago, after a long residence in this country, I had the pleasure and good fortune to get "a run home." Having no recollection of "the old country," save those pertaining to boyhood, I was prepared to find things as bad as you had repeatedly painted them.

My trip was a business one, and I visited nearly every large manufacturing city and town of England and Wales and Scotland. But I had little leisure for sight-seeing in the day-time. At night, however, I was generally out late, and visited the Theatres and Music Halls. I saw, too, many of the large cities on the Continent and in America, and always made a point of going to the theatres. I even walked along the Bowery in New York at two in the morning. Yet, in all my travels, which lasted five months, I was never once accosted by, nor did I even, to my knowledge, see a woman of the "unfortunate" class.

This, I think, puts a very different view on the subject from that which your writings would give. It is my experience, and I can only speak from that, but I believe that it would be the experience of any stranger visiting those countries, as I did, a simple visitor.

While on the subject of home life, I should like to mention that in England nothing struck me more forcibly than the true kindness and politeness of the people, especially the lower classes. In fact,

during the whole of my travels I never had one angry word said to me.

I remain, Sir, Yours truly,
Tokyo, November 18th, 1897. E.F.

(Why should an Englishman have angry words said to him in England? As to our correspondent's experiences of city streets at night, we can only say that they are very novel.—Ed. J.M.)

THE QUESTION OF SUICIDE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If the Colonel Bacon who is made to appear ridiculous in your columns through the clumsy adulation of "A Missionary" has a spark of common sense in his composition, he will exert himself to prevent, in future, the publication of such mis-conceived eulogies upon passing travellers as can have no effect but to curtail the privileges at present extended to visitors from foreign lands. Who or what Colonel Bacon may be, nobody outside of his own circle knows, and nobody can possibly care, in spite of "A Missionary's" fervid assurances that he was a class-mate and roommate of somebody, the commander of a militia regiment somewhere, a prominent lawyer, a successful business man, and a member of that unexampled congregation of wisdom and purity, the New York State Legislature. He may be one of the most estimable of living men, with two gowns, and everything handsome about him; but as depicted by "A Missionary" he is simply a meddling prigg, whose impertinent attempts to sit in arbitrary judgment upon the people of this country while "seeing Japan hastily" for a period of six weeks, must have taxed to the verge of desperation the forbearance of those upon whom he inflicted himself. If he actually did rush about, "almost all day and late in the evening," exciting "wonder at his energy and powers of endurance," "ready to censure and urge reform where needed," "proving himself a true friend of the Japanese by telling them their faults," and "calling upon them to cleanse their flag of the dishonour that sin brings upon it,"—he probably accomplished as much mischief in the month and a half of his sojourn as any predetermined agent of malevolence could have done, even though he was at intervals "impressed with the natural beauties of this empire and also with the many admirable qualities of the people." It is true that where a man apparently begins to pronounce sentence upon everything the moment he lands in Japan, and keeps it up incessantly for forty-five days, till the time of his departure, neither his praise nor his denunciations ought to be taken too seriously; but he may nevertheless make himself extremely disagreeable, and leave a very unsavoury trail of disgust behind him. In cases like this, the evil results are almost sure to be visited upon unoffending tourists who come after the industrious fault-finder.

One of Colonel Bacon's hasty criticisms has been dealt with, editorially, by the *Mail*. With regard to another, I beg to offer a few suggestions. "A Missionary" informs us that he "rebuked most fearlessly.....the cowardly habit of committing suicide." Anybody could have told Colonel Bacon, and "A Missionary" ought to have told him, that suicide is no longer a habit in Japan. It went out with the feudal system. Apart from this, the question whether suicide, as practised by the *samurai* of the old régime, was or was not cowardly, is one that cannot be settled by an obnoxious epithet. The motive of an act must be considered before its character can be defined. Would Colonel Bacon or "A Missionary" aver that all suicides are cowardly;—that every person who dooms himself to death, or accepts death when he might escape it, is a coward? Such a proposition could not be maintained for an instant. If it could, the sacrifice attributed to Arnold Winkelried might be declared a dastardly performance; and also the magnanimous refusal of a passenger to leave a sinking ship in an over-crowded boat, although adjured to take his chance with the rest. Disembowelment was resorted to in Japan for various reasons. It was the conviction of the *samurai* that he could not in honour survive what he regarded as a personal disgrace; and this, as Emerson once publicly affirmed, was certainly not the sentiment of a poltroon. Any man of spirit, whose life was forfeited to the State, felt it a privilege to strike the fatal blow himself, rather than be degraded by the touch of an executioner. In most instances, the sufferer had the satisfaction of knowing that by voluntarily destroying himself, he could avert further disaster from his family. Often in history, and even within the memory of foreigners now dwelling in Japan, suicide has been committed solely with the hope of reforming flagrant abuses, and serving the cause of humanity. It may, or may not, have been a mistaken means to the wish-

ed-for-end, but to call it cowardly indicates a turn of mind scarcely consistent with that "nobility of character" for which, according to "A Missionary," Colonel Bacon is beloved. It is the greatest pity that this fugacious investigator could not have worked, "somehow and somewhere," a little less "late in the evening," or cut short one or two of his "twenty addresses before large audiences;" and devoted the time thus gained to a closer inquiry into the national peculiarities which he noted chiefly to condemn. The lightning calculator is altogether out of place when social and moral problems present themselves for solution.

I am, Sir, Yours truly,
ANTI-PRESUMPTION.
Yokohama, November 12th, 1897.

ENGLISH CYCLING NOTES.

(FROM A CORRESPONDENT).

London, October 15.
With winter rapidly approaching, the cyclists seen on the road are naturally diminishing, therefore the police prosecutions for furious riding have been less. Yet one occasionally hears of some innocent cyclist being hauled up before the magistrate, and fined £2, and costs, simply for riding at the really moderate rate of 12 miles an hour. When quietly riding through one of the suburban towns the other Sunday, a clamour of bells and sundry shouts proceeded from the rear, and I naturally turned on to the side of the road to allow these frantic wheelmen to pass. Some 6 or 8 men travelling at a high rate of speed rushed by, and dodging in and out of the walking traffic, and using abusive language to those who failed to make way for them, hurried down the main street and were soon lost to sight. It is such men as these who have brought this persecution by the police on to the body of cyclists, and while not in any way upholding the police, I should certainly like to see these thoughtless scorchers brought to book.

There has been a great cry at different periods against the proposed tax on cycles, and though I should be sorry to see any hindrance put in the way of such a healthful and invigorating exercise, I cannot help thinking that such a regulation would in a great measure do away with the objectionable set of cyclists who career through towns and villages heedless of all pedestrians and to a great extent of their own safety. There can be no doubt that this lower class, through whom originated the term of "cads on castors," have prevented many a lady and gentlemen from cycling, as they revolt at the mere idea of being classed with them.

Though the police in many of the English counties are so stringent as to the rate of speed a rider may travel, in Scotland they seem to look upon it with a more lenient aspect, for on Saturday, October 9th, the 5 miles road race for the South of Scotland Championship was decided in the presence of a large assembly of spectators. Eight men started, and W. Hunter succeeded in covering the distance in 14 mins. 47 secs., which, with the state of the roads duly considered, must be reckoned as a fairly meritorious performance. The Stranraer Club, under whose management the championship was run, also decided their own road championship, the winner turning up in J. Luck in 16 mins. 1 sec.

Another proof that road racing is more successfully carried on in Scotland comes to hand with a report that W. Robson of the Hawick Cycling Club succeeded in improving upon the time for the 50 miles record upon the same day as the 5 miles road championship of Scotland was decided. Robson had splendid weather and the roads on the border were in fairly good condition, yet he only succeeded in knocking off 80 secs., having occupied 2 hrs. 36 mins. 40 secs. in riding the full distance.

Cycling is not only an exercise for the young but also to those well advanced in years, and though we do not hear of centenarians taking to the sport, cases of people fast approaching this period of life often come before our notice. The other day at the Liverpool County Court, a bicycle case was heard by a judge some 80 years of age, who remarked that though so advanced in years he had been trying to ride a bicycle himself and had already taken several lessons.

Now that the public and all cyclists manifest so much interest in record attempts, it might not be out of the way to glance for a few moments at the figures of the mile record which J. W. Stocks has, in a most marvellous manner, brought down to 1 min. 35½ secs. During the last seven years

this record has been improved upon by fourteen different men, who have brought the time down from 2 mins. 20½ secs., to the above, and with further improvements in tyres, machines, pacing and tracks, it is doubtful when the record will remain stationary. We, however, may now take it that the mile record will be allowed to sleep until next season under the careful protection of J. W. Stocks.

The two National Cyclists Union Championships which were held at Exeter and Birmingham will bring something like £300 into the coffers of the Union, Exeter bringing in the nice little sum of £62 17. 6.

JAPAN SINCE THE WAR.

FROM THE "MORNING POST'S" SPECIAL CORRESPONDENT.

A great deal has been written of late years on the subject of the so-called decline of British influence in the Far East. In fact, by dint of continually repeating the statement that "Britain has lost prestige," it has gradually become accepted as an axiom by a section of the European Press that such is actually the case. There have even been apologists who have sought to explain why it was so, and others who, while deploring that such a state of things should exist, have conscientiously endeavoured to mitigate our presumably humiliated position. It by the expression "Far East" Japan and China only are referred to, and if by loss of prestige loss of power and of influence are understood, it is difficult to trace any such thing out here, although the conditions of applying our influence may have become somewhat modified by the turn of events. This boom in an imaginary loss of British prestige began, as far as Japan was concerned, with the sympathy supposed to exist between the British and Chinese Fleets at the commencement of the China-Japan War, and a certain amount of colour was lent to the humiliation theory when subsequently Japan successfully applied to the then Radical Government of Britain and obtained for themselves a revised Treaty, the wording of which, from the point of view of foreigners here, might well have been considerably modified in our favour. That such is the case is easily explained by the fact that other and less important countries who followed our lead in granting Japan revised conditions, were without any particular difficulty, enabled to secure more favourable conditions.

I do not purpose to say much about the relations of China with Britain beyond pointing out, in passing, that our influence is said to have been diminished there because we refused to co-operate with France, Germany, and Russia in restricting Japanese influence in Korea at the close of the war. It was prophesied, not once but many times, that by holding aloof from the above combination British influence would be usurped by the co-operating Powers, that, politically speaking, our voice would be unheard, and that, commercially, we, as a nation, should suffer greatly. When I had occasion, some months ago, to interview Li Hung-chang on behalf of the *Morning Post*, at the close of his round-the-world trip, he was particularly emphatic on the subject of the loss of British prestige, and bitter in his criticism of our policy in the Far East. He said that China had incurred obligations to France, Germany, and Russia which she would be bound to pay off in preference to any claim that Britain might have. If one takes the trouble, however, to study this question otherwise than superficially it becomes difficult to trace that any of the three Powers in question, with the exception of Russia, have gained any material or practical advantage from their attitude with regard to Korea. But Russia is an immediate and powerful neighbour, and has merely enforced certain concessions which she would have been quite well able to secure with or without the co-operation of France and Germany, and whether or not the China-Japan War had ever taken place. The day has yet to come when China will fulfil moral obligations to anybody. It must be clear to all who have looked into the matter that she has never taken the initiative in such matters, for the whole history of the country goes to show that any concessions she may have made have been wrung from her, either by force of arms or force of circumstances. Such being the case, the amount of influence a given foreign Power may have in China is to be measured by the capacity of the country in question for enforcing its claims. And in that at the present day Britain, practically controls Chinese foreign trade, is her most important creditor, and handles her only available and tangible asset as far as foreign intercourse is concerned, her Customs duties, there can be no question as to the paramount in-

fluence of Britain in that country. With regard to Japan, however, while the result may be somewhat similar, the conditions which surround the question of her relations with foreign Powers are not by any means identical.

Japan's financial position just now may be somewhat weak, but her pecuniary indebtedness to foreign countries is insignificant. It stands to reason that in a country which has gone ahead so rapidly, and where modern education has developed so suddenly and with such sure strides, the influence of the foreigner, generally speaking, should be on the decline. When Japan had to look to the foreigner to advise her, to educate her, to purchase for her, to fight for her, and, in short, to "run the country" as far as foreign intercourse and modern civilisation were concerned, the influence of the foreigner was naturally at its highest pitch. But such is no longer the case, for however much we may accuse the Japanese of a vain-glorious attitude, and however much the foreigner may disapprove Japanese methods, there is no getting away from the fact that her policy is on the whole logical and level-headed. Japan may have made a great many political mistakes since the war, but her head has not been entirely turned by her successes, and she is quite capable of reasoning out many of her methods. Japan always did, and does now, detest the foreigner as a class, the time-honoured and hostile designation "Ketojin," which signifies "hairy barbarian," and which applied originally to the Chinese, not only survives in the present day, but extends to all foreigners. If, however, the Japanese are too polite to make use of the expression as a rule, it is none the less a fact that the feeling which gave rise to it is as strong now as it ever was. It is only of recent years, with the development of education and their increased international intercourse, that the Japanese have come to discriminate at all between foreigners of different nationalities. There were, of course, the Chinese, and there were other foreigners. The latter class of foreigners might be British, French, German, Italian, or American, but their faces, clothes, and habits were, from the Japanese point of view, more or less alike, and in a general way they had the same sort of religion. And in that most of the foreigners who live in Japan speak the same language, English, they were mostly looked on in a hazy way as being British.

The modernising of Japan, however, has brought with it the power of discrimination to a certain extent, and while the foreigner, generally speaking, may have lost influence, the exercise of this discrimination has been distinctly to the advantage of Britain. There is no doubt that in Japan, where the foreigner is essentially unpopular, the British are at the present day less unpopular and far more influential than the rest. And this in spite of the fact that Britons proverbially do not work for nothing, and that Britain, while supplying so many of Japan's imports, is by no means a correspondingly large customer. The Japanese feel, however, that they have on the whole been more fairly treated and got better results for their money in dealing with Great Britain than with other foreign countries. There is a greater faith both in the commercial integrity of the British and in the quality of British goods. There is no doubt that at a given price and with a certainty of delivery within a given time the Japanese prefer purchasing from us than from anyone else. The Trade Returns show this, in spite of the fact that many of the foreign Legations here, usurping the rôle of the commercial traveller, use what pressure they can to divert trade from Britain. Any foreigner living here, even for a short time, and whether he is in business or not, cannot help coming to the conclusion that as far as foreign influence is concerned that of Great Britain is far and away more powerful than that of all other nations put together. The accepted foreign language is English, the methods of carrying on large businesses are based on the English system, their Naval and Mercantile Marine follow the British lines, most of the technical education is of a British nature, factories and foreign houses are built on the British principle, the foreign literature is nearly all English, and the Japanese themselves find the necessity of issuing both daily and other periodicals in the English language, and, finally, even such of the railways as were originally laid down on German and American systems are being, at great expense, transformed to the British system.

Of the other foreign Powers who might be expected to have an influence on Japan, her neighbours, China, Russia, and America, and the far-off countries of France and Germany may be named. The Dutch, the Spaniards, and the Portuguese, who formerly played so important a rôle in Japanese foreign politics, might just

as well, as far as their influence on this country is concerned, have ceased to exist.

The relations of China to Japan are so different from those of other countries that one must take them separately. The influence of China on Japan in early times can never be effaced. She educated the Japanese, gave them their method of writing, their religion, their music, and to a certain extent their arts and industries, and these are indelibly ingrained in the Japanese character. But her political influence here is nil, for while no doubt the war formed the primary reason for the active defensive preparations that are now going on in Japan, it is not China that Japan is trying to put herself in a position to face, but Russia, and possibly other Powers. What the political influence of China on Japan may eventually be it is difficult to say, but at present it is slight. Commercially speaking, she is increasingly important as being a large consumer of Japanese products. China is the historical enemy of Japan, but Russia is the present, or, at all events, may possibly be the future one. As the Chinese are looked on by the Japanese with contempt, perhaps unwarrantably so, so the Russians, collectively and individually, are looked on as spies, for it is considered that the amount of business between the two countries is too insignificant to make it worth a Russian's while to live in Japan.

Americans residing in the country have been looked on with comparative indifference until lately. They were mainly inoffensive missionaries, who made no headway, it is true, or else traders whose business it was to buy from rather than sell to Japan. America was regarded as a country which had no foreign policy worth mentioning, at all events none which touched Japan, and she was an excellent customer. The only sore point between America and Japan was the contemptuous manner in which American legislators invariably endeavoured to class the Japanese with the Chinaman in the score which is known in America by the name of "Asiatic ascendancy," which was to be crushed in the United States at any price. Within the last few months, however, two matters have cropped up which have caused Japanese feeling to become very bitter against Americans: firstly, the large increase in the Customs tariffs, which has had the effect of "boycotting" many of the Japanese industries; and, secondly, the proposed annexation by the United States of the Hawaiian Islands, in which Japan has such vital interests.

The influence of Germany, which when Bismarck was in power, was undoubtedly strong, both commercially and politically, has been on the wane for some years past. Commercially, the expression "made in Germany" carries at the present day almost as much a stigma in Japan as it does in Britain. Sirenous efforts are continually made by German manufacturers and business syndicates to propagate their trade here, and a great deal is done in certain very cheap classes of goods. But there is a growing distrust of German methods of business, and the Consular statistics, which go to show that German trade flourishes here, are unreliable, as, in order to do business that will pay them, many of the German firms dealing with Japan both here and in their own country are obliged to handle British goods to a very large extent, and these often appear in the returns as German imports. On the other hand, much of the rest of the German trade, which also goes to the credit of Germany, as far as statistics are concerned, are goods which are palmed off on the Japanese as being of British make. The Japanese, however, owe much to the Germans for efficient instruction, more particularly in medicine and military affairs. Nearly the whole of their modern medical training has been based on German teaching, though the few Japanese doctors who have been educated in Britain are at the head of their profession here. The influence of France on Japan does not go to be reckoned with, but both Germany and France have politically lost favour and confidence by their co-operation with Russia on the Korean dispute.

Doubtless the principal bond of sympathy between Britain and Japan as nations lies in the fact that in their own particular parts of the world the two countries are somewhat similarly situated. The insular position of Japan and her jealous neighbours made her politicians alive to the fact that she must adopt our system of defence. To advance her foreign trade she must encourage by all means in her power a strong mercantile marine. Her rapidly increasing population and the limited area of Japan, combined with the facility with which the Japanese adapt themselves to living elsewhere than in their own country, all seem to point to the possibility of her becoming a colonising Power in years to come. The one thing which

may militate against British ascendancy in the Far East is our neglect to watch the policy of Russia in this part of the world. In this, too, there should be a bond of sympathy between Britain and Japan, for Russia by threatening Japan undoubtedly menaces British interests. The essential point on which Japan differs from Britain is, as I think I pointed out in a previous article, that she does not treat the foreigner in the same liberal spirit as we do. In following out this policy many foresee that, apart from the question of actually clashing with the foreign Powers, she may defeat in the long run her own programme of progress and civilisation. However, it is a little premature to discuss this matter at the present stage, in view of the change which will take place when the Treaties come into operation. Then it is that the future relations of Japan with the foreign Powers will be determined, and the question, if complications are to be avoided, will require delicate handling on all sides.

THE ENGLISH ENGINEERING DEADLOCK.

HOW MATTERS REALLY STAND.

One of the most lucid expositions of the present deadlock in the engineering trades of England is contained in a speech delivered by Sir Benjamin Browne, President-Elect of the Newcastle Economic Society, which is reported in the *Newcastle Chronicle* on October 9th. We give it in full, as its interest demands:—

Ladies and Gentlemen,—Our Society is one for the discussion of social and economic problems. There happens, at this time, to be one of the most serious problems of this character dislocating our chief industries, and, as such, it would seem natural that our Society should take a special interest in its merits. As I myself am, however, in no small degree responsible for the action of one side in the dispute, I had some doubt whether I, especially in my position of President-elect, ought to bring the matter forward. Having, however, taken counsel with some of the most experienced members, they advise me to give my own account of the matter, but I have asked your retiring President to hold the chair for this evening, so that, for the moment, I am before you only in the position of an ordinary member. I need hardly say that I allude to the present stoppage of work in the engineering trade. This began by a strike in London, which was followed by a lock-out in the provinces, and it is, I believe, the largest dispute that has ever taken place in this industry. It is, probably, well known to all that a succession of demands had been brought forward by the Amalgamated Engineers against the employers, the majority of which had been settled, but one of which, commonly called the "Machine Question," was still unsettled when a demand was made by the Amalgamated Engineers in London to have their hours of labour reduced from 54 to 48 per week without a reduction of wages, and this has brought about the present stoppage of work. I should do well to premise that I must be considered as putting the question forward from the employers' point of view, and, while I am most sincerely anxious to do justice to the views of the Amalgamated Engineers, still, I know how difficult it is to be absolutely impartial where one's own interests are engaged, and, therefore, it is possible there may be arguments to be brought forward on the side of the workmen to which I am not in these papers giving full weight.

THE POINTS IN DISPUTE.

Now, first of all, as to the various disputes which lead up to the present difficulty. I think they mainly fall under two heads. They are: an effort to limit the class of men that we could employ on certain kinds of work, or to enormously increase the cost of doing that work. For example, they tried to stipulate that we should only employ skilled mechanics to do what any intelligent labourer could learn to do in a very short time. We maintain that this is adding enormously to the cost of the work and is very unfair towards the labourer. This demand gradually took the alternative shape that if we employed what are called machine men, that is, more or less fully-trained labourers, on our machines, then we must pay them the same wages as mechanics. Now, the effect of this would be that an enormous number of our men would have had to receive increase of wages of 10s. or 12s. a week at once; but, besides that, it is obvious that if you pay a slightly trained machine man as much as a highly skilled artisan no one will employ the machine man as long as there are any artisans out of work, and the effect, in average time, would be to drive enormous numbers of machine men out

of work, for I would just point out that obviously you can deprive any man of his employment if you fix the scale of remuneration so high that it is worth no one's while to employ him.

In the case of trial trips and other matters, demands for increases were made, which, in some cases, would seem almost incredible. It is right to say that when these matters were brought before head-quarters in London many of the worst demands were abandoned and others very much modified, and at a Conference that was held just before Easter all questions, as far as the Federated Employers were concerned, were settled except the machine question which was, speaking broadly, how far the men were to dictate to their employers as to what men were to be put to work what machines. We hold that if an employer buys a machine he has a right to put who he pleases to work it: if the man spoils the work so much the worse for the employers, and, practically speaking, experience has brought into existence certain fairly well understood customs as to which machines might be reasonably expected to be worked by mechanics, and which might be worked by less highly-paid classes of men. The majority of employers had no wish to deviate very materially from what had been the practice in the past; but we strongly objected to incessant new demands and encroachments; and, as I would also remark, for mechanics to monopolize all such work is taking away from labourers all chance and hope of bettering their condition. Besides there are also nothing like mechanics enough in the country to fill, in busy times, all claims that would be made upon them if this principle were carried out so far as was demanded in many localities. As I have already said, I do not know how far these local demands were supported by the central authority of the A.S.E. in London; but the demands were made, strikes frequently took place, and the employers were harassed to a degree which was unexampled in the memory of any of us. It must also be observed that some of the men's authorized spokesmen, like Mr. Tom Mann, avowedly say that the demand for 8 hours is only the stepping-stone to further demands, and teach the men to look on their employers as their "organized enemies."

RESTRICTING THE OUTPUT OF MACHINES.

There was also a general spirit, which was constantly brought under our notice, that the A.S.E., unfortunately, wish to restrict the amount of work that they turn out. Much resistance was shown to every effort to run machines at higher speeds and to make them do more work. In England, as a general rule, they refused to allow one man to work more than one machine, whereas on the Continent or in America he will work sometimes as many as five or six, and that without any serious amount of labour to himself, for many machines once set will go on for a long time without being touched. In the Elswick works a body of officials were organized who are commonly called "feed and speed men." Their business was to see that all the machines in the place were turning out the greatest amount of work possible, and to see that the experience gained in one part of the factory would be at once applied to every other part. This, though it entailed no additional labour on the men, was very much resented, so much so that one of the chief officials of the A.S.E. in giving evidence before the Parliamentary Committee on fair wages, protested against it, and demanded that if it was continued the Elswick works should be struck off the list of Government Contractors. We have also been told by responsible Trades Union leaders that the more men they can make us employ to complete a given piece of work the better for them, and other instances of this doctrine that the less work they can do for their wages the better, can be readily brought forward. Now I cannot believe that these doctrines find favour with the more thoughtful and intelligent men, but they certainly are held by officials in high authority and are acted on sufficiently to have caused us very seriously increased difficulties in the management of our works. The view of the employer is that the more valuable a man's services are the better remuneration he will get, and that if we can reduce the price at which we can sell our engines and machinery we could then very largely increase our trade, and thereby make a very largely increased demand for workmen. We also believe that skilled and intelligent workmen will always command their price, and that the skilled man has nothing to fear from an intelligent labourer, who only began to learn the business after he had arrived at maturity. In every trade reduced prices means increased business; and in our business it is especially so, for the majority of our products, such as ships, railway material, machinery, &c., are simply investments of somebody's capital for the purpose of earning dividends, and the cheaper we could supply these articles the more we could

stimulate investments. I believe that if every workman simply tried his utmost to turn out the greatest possible amount of work at the cheapest possible cost we should require far more men than we can now employ; we should make good trade much more lasting and bad trade far less common; and besides that the amount of money that each man would take home at the end of the week would be very much larger than it is at present.

FOREIGN COMPETITION.

As regards the danger of foreign trade, I will give a few instances. Even in Newcastle, in many of our factories, you see rapidly increasing numbers of machines being brought in of Swiss, Belgian, or American manufacture. The new underground railway now making in London, to be worked by electric power, has accepted the contract of an American house for the whole of the electric machinery and locomotive engines, to be delivered and set to work in London in successful competition with all the English houses. A certain maker of war material, who has works both in the South of England and in the East of Europe, having received a few months ago an order for nearly half a million's worth of goods found it to his advantage to get the whole of it executed on the Continent and not in England. The Italian Government recently sent out enquiries for some torpedo-boat-destroyers, very similar to those that many of us are now building for our own Admiralty, and I was much concerned to find that the German houses offered to supply them at not more than 1/10th of the cost of the lowest English house. I may add that most of the large contracts for rails for Indian railways have been recently taken by the Americans, and I regret to say that these instances can be multiplied almost indefinitely.

THE EIGHT HOURS QUESTION.

Now as regards the eight hours. Some people would over-ride the whole of what I have said by saying that we should get as much work done in eight hours as we can in nine, and they would quote the cases of some manufacturers, who say that they have tried it and found it so. It is, of course, a very delicate thing to criticize the statements of these gentlemen, but as regards one of the works, the Thames Iron Shipbuilding Co., there is a good deal to be said. First of all, although they are somewhat prominent as shipbuilders, they seldom, if ever, make their own engines, certainly not for any of their important ships. I believe they do a large repairing business, but for purposes of competition they are not engineers at all, for there is necessarily a large repairing business in a city and port like London, and, although nobody gets repairs done on the Thames who can help it, there are a very large number of firms who can not help it, so that some firms engaged on this work can increase their charges without feeling the immediate effect of it, although, in time no doubt, it must tend still more to drive away trade. But the managing director of these works also gave out some time ago that he considered the Government ought to give him a very much larger sum for building a given ship than they would give to anyone in the North of England or Scotland, because, otherwise, he could not, being in London, compete with us, and recently, after building the *Blenheim*, he made a claim of about £50,000 on the Admiralty for money which he alleged he had lost owing to his work costing so much. Now, while it is obvious that no man ought to work, either in his own interest or even in that of his employers, for such a length of time and to such an extent as to hurt himself, there is no evidence to show that the present hours are too long. We always find an abundance of men willing to work overtime, and we are not aware that they feel any ill effects as long as the overtime is not too frequent or too protracted. When the nine hours was obtained in 1871, the men certainly did not do as much work in nine hours as they had done in ten, and the deficiency was not made up till after long years of effort in improving our organizations and the introducing of new and better machinery. On the Clyde they reduced the hours to 51, but they found they could not get on and were compelled to revert to 54. We ourselves not long ago reduced the hours from 54 to 53 by taking off an hour on Saturday. The effect of this, as far as we can judge, has been that on the first five days of the week there is no difference and on Saturday the quantity is just diminished by the amount of time that they leave work earlier; and, furthermore, such has been found the frequent experience of almost every employer of labour who has from various reasons to work his men shorter hours. And those who have recently given the 8 hour day say that the men certainly do no more work per hour than they did before. It is curious to observe that the men specially claimed the eight hours in London on account of the

distances they had to travel daily to their work, and yet at the three works where the men struck—Humphreys', Thorneycroft's, and Middleton's—there is no difficulty in getting abundance of workmen's houses close to the works, and if men live further off they do it by preference. Sometimes men work at places where, owing to trains or steamers, they can only work a shorter day; occasionally the factories are put on short time; we frequently have cases of men who, instead of starting at 5 only come at half-past 8, and the invariable experience of all of us has been that when once the hours are short enough not to injure the man's health you will not increase the output by shortening them any more. Mind, shorter hours are luxuries, and I should be glad to see hours shortened if it could be done without injury to the men themselves, and if the state of the trade would warrant it; but it is very mischievous to pretend that luxuries cost nothing, and that we can indulge ourselves without having to pay for it. Rightly or wrongly, I was one of those who was really glad to give the 53 hours instead of 54, because I found that it was a real enjoyment to the men to get one whole afternoon a week, which they could use either for their pleasure or profit, as they pleased; but it is one thing to say that I was glad for them to have the pleasure and quite another to pretend that it did not cost anything to give it. As a general rule the firms who have given the 48 hours are those that are engaged on repairing and jobbing work, and numbers of those have very little machinery, so the question affects them much less; and also in the first instance, they throw the burden on to their customers, and so do not feel the immediate effect, though, as I have before said, they may do so in the long run by the shrinkage of their trade. We are often told that we employers could afford to make this concession, but this could only be done either by increasing the cost of the goods that we sell or by paying it out of the profits. As regards the first, I have already tried to show that foreign competition is a most serious evil. I must remind you that at the time of the shortening of the hours from ten to nine, in 1871, foreign competition was for a very remarkable reason almost non-existent, because America had not become a serious competitor, and the whole energies of Europe were employed in making up for the great destruction of property caused by the Franco-German War.

PROFITS.

As regards our profits. The demand for 48 hours is a demand for a reduction in the working hours of 11 per cent. We are often told about the profits made at Elswick Works. Now, as a parallel to the case, I remember seeing in a newspaper the great profits made for its owner by the horse that won the Derby last year, and yet we all of us know that though a man may occasionally make a very large sum of money by racing, on the whole, keeping race horses is a great and frequently a ruinous expense. In Stuart Mill's "Political Economy," he tells us that whereas if a man trains his son to be a shoe-maker he is reasonably sure to be able to earn a living at that trade, yet if, on the other hand, he trains him to be a barrister, although some barristers earn larger incomes than is probably done in any other calling in the world, yet the chances are twenty to one against his son being able to support himself at all, and he further says that the entire earnings of barristers, divided among the whole number, amount to probably less than the average earnings of shoemakers. So it is the case that the largest profits are nearly always made in those investments where profits are uncertain and where the losses are almost always the largest. The day after we get the report of what was called the Jubilee Report of the Elswick Works, we get the report of Palmer's Shipbuilding and Iron Co., wherein the Chairman tells us that they have not only paid no dividend for a number of years, but that they have now paid about three millions in wages since the capital was subscribed and have not received one farthing of remuneration for the company. Now, how can a firm like this give the eight hours, and if this firm were ruined and all these men thrown out of work what would be the effect? There is only one Elswick in England, but if you look at even the share list in the Newcastle daily paper you will see that there are other firms besides Palmer's that pay no dividends. I feel that I ought to say a few words as to the position of the Elswick Works, Col. Dyer, and the amount of unjust abuse that has been heaped upon him. He, as a director of Elswick, could, I imagine, do nothing that was not approved by the other directors, such as Lord Armstrong, Sir A. Noble, and Mr. Crundas; and he certainly has gone no further than the general body of employers were prepared to follow him. It has been stated that Elswick has originated the whole thing and has forced other employers to join under pre-

sure. Now, it might easily be believed that the influence of Elswick would be powerful on the North-East Coast, but why should it be so on the Clyde? And anyone who reflects must see that it could not possibly coerce the vast industries of Oldham, Bolton, Manchester, and the Midland districts. Nor do I see any evidence of the unpopularity of Elswick among the workmen. Numbers of men have continued to work there in a way that they have done in no other factory, and, therefore, Elswick is fairly busy, while other works that I could name have no skilled engineering labour at all left except their apprentices. Whatever may be the cause of this, it is strong evidence that there is no unpopularity. Moreover, the effect of the Elswick Works has been to raise the rate of engineers' wages in Newcastle from being about the lowest in England to be one of the highest.

EFFECTS OF AN EIGHT HOURS DAY.

And now, to detain you no longer, I will state what I believe would be the effect were the eight hours given generally throughout the engineering trade of England. The first effect, especially following the long strike, would be to make things extremely busy, because there would be large arrears to work off, and especially if, as I anticipate, the men do very much less work in eight hours than they do in nine, it is evident that the immediate requirements of the world can be worked off more slowly than heretofore and as no one wants to wait for what is absolutely necessary to their existence there would be considerable bidding among customers to get their work done, which would cause a considerable momentary increase both in prices and wages. But this state of things would not last. Every rise in prices would tend to make our customers go elsewhere, and probably in two or three years at the outside, we should have such a depression of trade, or even worse than, those very serious years, 1877 and onwards, a large number of small and weak employers would probably be thrown out of work, never to be re-employed; and a vast amount of suffering caused. Those employers that were left would, no doubt, strain every nerve by the adoption of appliances and by increasing their capital to recover the ground that was lost; numbers of men being thrown out of work the men would have to submit to a severity of discipline to which they are wholly unaccustomed and probably to what might fairly be called an amount of "nigger-driving," which would be hateful both to the employers and employed, but which would only be endured in preference to the ruin of the one and the starvation of the other. This is what largely did happen after the nine hours movement. To say that the country has got over it is the same as to say that Hamburg has got over its recent terrible visitation of cholera, or to say that if you travel in France now you will see few traces of the misery and destruction caused by the Franco-German war. The world sooner or later gets over all its great calamities; but to ignore these and to forget the effects of them can only be caused either by levity or heartlessness. As I have said elsewhere, I yield to no one in my conviction as to the superiority of the British workman, when he exerts himself, to any other man living, but if he ceases to exert himself, or if he handicaps himself too heavily by trade restrictions or shorter hours, he is like a horse over-weighted in a race where the best animal may be beaten by another altogether inferior if the conditions are too unfavourable. I firmly believe that we employers are fighting this question in the interests of the workmen quite as much, if not more, than in our own.

MODERN JAPAN.

MACHINERY VERSUS AGRICULTURE.

Tokyo, August 20th.

It is only natural that while Japan is so rapidly modernising herself in a variety of ways, her newspapers should follow suit. I think the great sign that the Japanese Press is fast getting into line with that of the Great Powers is found in the fact that the Japanese editors, like most of their foreign confidants, have found it advisable "to have a go for" Great Britain and her methods whenever there was a lull in more interesting copy. Some of the mis-statements made here about England are wild and reckless enough to do credit to the most rampant of French journalists when suffering from a severe attack of Anglo-phobia.

Only a few days ago I came across a statement in the *Yorodsu Choho*, a fairly well informed daily paper of Tokyo, to the effect that Great Britain had joined the now historical coalition of Russia, France, and Germany, formed at the time of the

* This does not refer to the foreign journals in Japan but to journals all over the world run by people who are not English.

war for the purpose of checking Japanese progress. Wildly absurd as such a statement may read to an Englishman, it is none the less a fact that there are many Japanese who will give credit to this or anything else stated in their newspapers against the foreigners.

In spite, however, of these occasional outbursts against us, Great Britain just now is the most popular of the foreign Powers with the Japanese. Japan has at present too many real enemies, China and Russia, for obvious reasons, and America on the question of Hawaii, while France and Germany are looking on with an openly threatening attitude. It is, therefore, hardly likely that a spasmodic journalistic agitation will get up much genuine resentment against the only Great Power that really leaves Japan alone in her methods of conducting her commerce and politics. In fact, at the present day the feeling is generally the other way round. People are talking of the possibilities, extremely vague it is true, of an alliance between Great Britain and Japan for the purpose of guarding mutual interests in the Far East. In arguing on these possibilities, it is only natural that reasons should be given, and the journals are fond of pointing out the similarities of the situation of the two countries in their respective parts of the world. They speak of the "island kingdom," and the "island empire," and point out how both countries possess aggressive neighbours. Russia is spoken of as the common political enemy, and Germany as common commercial opponent. For while the United States does her best to boycott the products of both Great Britain and Japan, Germany, while underselling us, and counterfeiting our goods, our trade marks, and our labels, is, as far as Japan is concerned, the nation with whom she will first engage in an industrial tug of war.

For it is in the cheap German articles that Japan is mainly launching out now, and she will not be able to tackle the better class goods that are made in England for some time to come on any large scale. But it seems that there is yet another point of sympathy, or identity at all events, between England and Japan; and it was first pointed out to me some months ago by Viscount Enomoto, the then Minister of Agriculture and Commerce.

In course of conversation he pointed out the rapid advance of Japan's modern industries, and expressed his belief that, while agriculture now held so preponderant a position in the revenue of the country, it would have eventually to give way in importance to the manufactured produce which was so steadily pushing to the front.

The Twelfth Annual Report of the Department of Agriculture and Commerce, recently published, seems to confirm very fully the opinion of the ex-Minister. The *Kokumin-no-Tomo*, an enterprising Tokyo periodical, analyses somewhat bombastically this official document; and, basing its calculations on the results of the last few years, delivers itself of the somewhat optimistic prophecy that by the year 1895 the annual value of Japanese manufactures will have nearly reached the figure of three thousand million yen. At the same rate of calculation the manufactures of Japan will, in the following year 1906, have equalled those of Russia. It is well to mention, however, that the latest trustworthy figures we have on this subject, take us up to the end of last year, 1896, and the value for the twelve months stood at four hundred and one million yen. Of the rate of increase up to that time account has not been very carefully kept. But it is stated that for some years past the average value of manufactures has been advancing at the rate of 25 per cent. per annum.

The fact which most bears out the probability of a largely extending industrial capacity in Japan is the rapid increase in the value of the machinery imported from abroad. For the year 1886 this amounted to 1,330,000 yen; in 1890 this figure was raised to 6,940,000 yen; and for the year 1895, no less a sum than 13,630,000 yen was reached.

The following table compares the relative values of total exports of manufactured goods with the total imports during the same period:—

	Exports. Yen.	Imports. Yen.
1886.....	5,268,000.....	9,831,000
1890.....	11,606,090.....	20,034,000
1895.....	40,058,000.....	30,321,000

The figures in the above table are correct enough, no doubt, and show roughly that in the ten years in question the exports of manufactured articles have increased between seven and eight-fold, while the imports have trebled themselves. These results have been obtained in yen, but as the value of yen has been subsiding during that period, the proportions of increase if calculated in sterling would not be so great. In dealing with international trade, of course, it is preferable to calculate in sterling, but this would be a complicated matter owing to the fluctuations of the dollar, and it is not necessary to know the exact value of

the increase for the purposes of this article as touching engineering interests. The great point to be borne in mind is the ratio which the value of engineering imports bears to the total imports of Japan.

If the above figures are referred to it will be seen that in the year 1886 the value of imported machinery amounted to less than one-seventh of the whole. In 1890 it had increased to more than one-third; while the statistics up to the end of 1895 show that the machinery represented not far short of half the value of the whole of the imports.

Now it is hardly necessary to point out that it is the imported machinery which enables Japan to develop her modern industries, and this very rapid increase in her engineering plant will within a not very distant date transform Japan from an almost purely agricultural country, as she was a short time ago, into a modern industrial nation. Agriculture still holds the upper hand against manufactures in the ratio of six to four in value, and this in spite of the fact that only twelve or fifteen per cent. of the area of the country is under cultivation as arable land. This is not for want of enterprise, for the Japanese are almost ideal farmers, but because it will not pay to cultivate the remainder of the country. The opening up of so many new railways will no doubt enable a certain extension of agriculture, but this will bear an insignificant proportion to the extension of modern industries. On the other hand, the increase in wages, pointed out in a former article of this series, will make it increasingly difficult for the farmer to find labour at a price which will pay him to open up new land. Japan, then, is at the present time face to face with a similar situation to that in which England was placed when modern industries began to elbow out our agriculture.

We have long since accepted the fact that we must let our colonies and the foreigners supply us with most of our food, whether necessities or luxuries, and some day Japan may find herself in the same condition. It is to be presumed, however, that this cannot come about for many years, but in view of the rapid transition which is taking place here in almost all methods, I should be sorry to hazard a prophecy on the subject.

Of course, in value of products, Japan is still far behind the big European Powers, and with a view to making the situation clear, I quote below her own figures, dealing with the values, and the ratio which agricultural bears to manufacturing products of the countries in question:—

AGRICULTURAL VALUE.

	Ratio. Per cent.
Japan.....	50,000,000..... 60
England.....	251,000,000..... 23
France.....	461,000,000..... 49
Germany.....	424,000,000..... 42
Russia.....	563,000,000..... 61

MANUFACTURING VALUE.

	Ratio. Per cent.
Japan.....	32,000,000..... 40
England.....	820,000,000..... 77
France.....	485,000,000..... 51
Germany.....	583,000,000..... 58
Russia.....	363,000,000..... 39

It would seem that the limits of agricultural capacity in Japan had been very nearly reached, for want of available area and for want of cheap labour. I do not think that agricultural machinery will ever come much to the aid of the Japanese in reducing the demand for labour in this respect; as rice, the staple product of the country, does not lend itself to mechanical handling, and if it did, the country is too much cut up into small holdings to admit of machinery on any large scale. On the other hand, there is a limitless field for extending a multitude of modern industries which will pay better; and it is well for the Japanese, and for the British manufacturing engineer, that such is the case, though no doubt some of our other manufacturers will feel the effect of Japanese progress as a competitor. —*The Engineer.*

PARISIAN GOSSIP.

(FROM OUR OWN CORRESPONDENT.)

Paris, October 16th.

The Niger question has entered a more *sang froid* phase. It is felt that there is plenty of room in Africa for the expansion of England and her thronging hives of population, and equally so for France who has no swarms to migrate. There is room even for Germany to construct another Grand Trunk Usambara Railway, which carries its one passenger weekly with Tentonic minutiae. It is considered that there is no use in raging over doubtful claims to misty hinterlands and shadowy spheres of influence.

For the moment, the good old rule, the simple plan prevail, that they should take who have the power, and they should keep who can. Perhaps this would be avoided were Lord Salisbury and M. Hanotaux to be closeted together for a few hours, supplied with the latest map of Africa, a pair of compasses, and a book of logarithms—Nansen's copy, as that might bring luck. They would quickly dispose of what remains of No Man's Land in the Dark Continent, especially as both statesmen believe that two centuries must elapse ere the annexed territories become going concerns. That geometric solution failing, nothing remains but to continue the steeple-chase—France has had the start upon British lethargy and supineness—between the two Western nations. Often the tortoise overtakes the hare, but since France has taken to study geography, she is finding out numerous short cuts across the continent—the better to facilitate British and German commerce. Were France not protectionist, and England not a one-sided free-trader, the earth-hunger of both would be less difficult to appease.

Internationalism as applied to labour is evidently in a drooping condition. Neither France nor Germany has subscribed a centime or penny for the unhappy engineers' strike. Now the French socialists, who claim to be the bearers of the Labour Standard, are off with their love for their Teutonic brethren, since the latter have declared, and backed up their words by voting the estimates for the new cannons and small arms, they would shoot down any invaders of their country, no matter whether they came from the borders of the Seine or the Neva. The wonder was that French workmen were so naïve as to believe the contrary. The Kaiser would immediately shoot the pickelhaube that attempted to spare the skin of an invader, were he socialist or philanthropist. Peoples are more and more gravitating to live within themselves.

No one is exactly surprised at the secession of the Abbé Charbonnel from the Catholic Church. Since some time he was regarded as a combination of a free lance and a Boanerges. He never ran well in the ecclesiastical harness, but was never silenced, as were Lamennais and Didon, not being of a celebrity equal to theirs. The Abbé felt that the Pope did not keep, as it were, step with the times; he did not presume to convert His Holiness like ex-Père Loyson, nor has he any intention to start a new religion. He separates from the Church because the latter is intolerant; he prefers the free Christianity of Channing and Tolstoi, that is the trend of his book; *La volonté de Vivre*. The Abbé was also vexed that the Vatican opposed his crank, his *clou*, for the 1900 Exhibition—a "Parliament of Religions" where all religious consciences would meet on terms of equal dignity. He intends to dry-nurse that idea. The Abbé has had many a hand-to-hand encounter with the free thinkers and atheists; he never declined to attend their meetings and discuss their assertions, the only reply he often received was a chair thrown at his head, or a carafe of water; he and a body-guard of stalwarts would not be expelled from any meeting without a fierce fight. The ex abbé, for he is now in civil costume, after sending in his letter of renunciation to the Cardinal Archbishop of Paris, forwarded simultaneously a trunk to his parish priest, containing his canonicals, breviary, hat, &c. The journals already announce his marriage with a healthy widow from Chicago—the rumour was to be expected.

The banquet given to President Faure by 750 of the leading merchants and traders of Paris, of all political opinions, was a fitting wind-up to the Peterhoff fêtes. It was a very successful affair, although the Presidents of the Senate and Chamber abstained, having taken huff at the delay in inviting them after securing M. Faure. The latter was supported by the whole strength of the Cabinet, less one Minister who is doing commercial travelling for the country. The speech of M. Faure, which he read with emphasis and clearness, was to urge the business world to be up and doing, and resolve to extend the industries and influence of France abroad. The litany of the Russian Alliance was short—but had to be recited. The dinner showed that there has been no falling off in M. Faure's popularity since he returned from Russia.

Mlle. Chauvin does not appear to be very sanguine, though a regular "doctress of law," to her clients—nearly all of her own sex. The Council of the Order cannot consider her application till the Procureur receives her oath, and this he declines because no law authorises him to do so. He is of opinion that were lady barristers allowed to appear in Court there would be nothing to prevent them from sitting on the Bench. A Madame Rhadamantus would be a fearful spectacle. There can be no relief for Mlle. Chauvin save

by amending the law; no deputy feels inclined to undertake that reform, hence Mlle. Chauvin's brother, who is a lawyer, intends to win a seat in the Chamber and bring the difficulty to a head.

A large meeting has just been held in the public hall of the Sixth Mayoralty by the *feminités*, to discuss the question, "Is woman made for Conjugal life?" proposed by Mme. Piene. It was a "he crier" opened the ball; he declined to give his name, as it might involve his situation, that of "professor of boxing in a religious college." He read a short bill he had proposed to send to parliament; the first clause was to abolish marriage—that of course would end conjugal life; all persons who swear fidelity in love, to be sent to prison for fourteen days or twelve months; if habitual criminals in this respect the punishment to be five years. Every little stranger that arrived—"lumps of flesh," no matter from whence or where—would be sent to the Regional Baby House or "Ponponnière." This is only the doctrine of Jean Jacques Rousseau; he always transmitted each new olive branch to the neighbouring hospice. A Hindu lady "took the floor," and stated that in her country, the infants bore only the mother's name, as ladies knew very well a father was only "imaginary." This was too strong for the lady president, who reminded the oratrice that her proposition was not among the orders of the day. She had to sit down. Then Madame Renard moved that the State be the "Collective Father" of all babies. It took the young men, when of age, to make them soldiers during three years; instead, let the State rear the infants till three years old. One lady had the audacity to assert that love in marriage was possible but was affected by money calculations weighted by silver and gold. A bimetallic lady flew at her at once for attacking capital and the precious metals; a terrible tumult ensued when Madame la Presidente expelled both ladies, and so smashed up the meeting.

The new Prefect de Police, M. Charles Blanc, is aged 40, and a native of Gap in the Upper Alps, though reared, it may be said, in Paris. He has risen from a varied administrative career under the Home Office. He is no stranger to the Parisians and has always been popular; so he may be said to be at home. He upholds the *fortiter in re*, by blending with it the *suaviter in modo*; he takes nothing *en tragique*, and makes great allowance for human nature. He is friendly in advance with the Municipal Council, and that is the best evidence of his tact and talents. Were he to concede to the old newspaper women of the kiosques the right to obstruct the footpaths with their tables for the display of pictorial journals, magazines, &c., they would declare him to be a heaven-born Prefect, and send a deputation of their order to thank him, present him with a bouquet, and kiss him.

M. Chaffonjon, who has just returned from an exploration mission to Siberia, declares that the vast region is a veritable bonanza for trade, and that the Russians would be only too glad to see the French throw themselves into the development of the territory, now augmented by "the possession of Manchuria" by the Czar. But judge of the explorer's indignation and surprise. At every place he visited in Siberia, he found German dealers had long since preceded him, and what was worse, had flooded the markets with cheap and repulsive imitations of French outputs. He calls upon his countrymen to deliver Siberia from the commercial domination of Germany, even if aided by England,—that would be as the Americans say, "a large order."

Ten days ago, the ambulatory and sedentary indigents formed a syndicate to protest against the uncharitable treatment of the Public Charity Board. Now the charcoal and coal men have syndicated to denounce the grocers for selling firewood and packages of charcoal. But the coal huxters themselves sell wine, liquors, vegetables, fruit, eggs, poultry, fish, and newspapers—quite a *macédoine* of the necessities of life.

Lucie Jacquillart is the daughter of poor peasant farmers and came in Paris to seek her fortune, at the age of 17. She is extremely handsome, possessed of seductive manners, and of great natural talent. She ruined many dupes, and graduated in prisons—her last stay in one, was for three years. That school was the finishing of her education. Liberated, she started on the religious tack, was organizing a charity; called in state on Baron Oppenheim, the well-known banker, to solicit subscriptions: the banker being out, she finished by capitulating his confidential secretary—a married man with three children; he set her up in small apartments in the Champs Elysées, but drew on the bank for 50,000 francs. Lucie had now called herself the Comtesse de Chalon. Baron Oppenheim pardoned his unfaithful secretary, and Lucie restored the 50,000 francs. But

the secretary soon ran up the deficit to 300,000 francs. Lucie captured the Baron himself, and his letters thanked her in the "name of God and the Blessed Virgin" for inquiring after his mother. The jury at once acquitted the Secretary and the Comtesse.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

CONFERENCES AT WASHINGTON.

London, Nov. 19.

The Seal Conference and Reciprocity Conference at Washington have terminated without any result. The Hon. Wilfrid Laurier has returned to Canada.

AUSTRIA AND TURKEY.

It is stated that the Sultan has ordered full compliance with Austria's demands, including the payment of a quarter of a million on account of the debt due upon the Oriental Railway, which was an Austrian undertaking.

The statement that Turkey has complied with Austria's demands has been confirmed.

Count Goluchowski, Austrian Minister of Foreign Affairs, in addressing the delegations, said that the honour of Europe was pledged to settle the Crete affair. He emphasised the existence of a close *entente* between Russia and Austria, based upon the reciprocal repudiation of any ideas of conquest in the Balkans, and dwelt upon the excellent relations existing between Great Britain and Austria, despite some difference of opinion upon certain questions.

London, Nov. 22.

GREAT FIRE IN LONDON.

An immense fire has occurred in the Cripplegate quarter of the City, the damage through which is roughly estimated to amount to four millions sterling. Hamsell-street, Jewin-street, Wells-street, and Nicholas-square have been destroyed, and other streets surrounding very much damaged.

The recent fire in Cripplegate is believed to be the most extensive conflagration since the Great Fire of London in 1666. It covered the space between Fore-street and Aldersgate-street, and every engine in London was engaged in fighting the flames.

GERMANY AND CHINA.

London, Nov. 20.

The *Post*, a semi-official newspaper published at Berlin, says that whatever China's reply to Germany may be, the German force at present occupying Kiao-chow will remain there a considerable time, and barracks will be built for their accommodation during the coming winter.

London, Nov. 24.

The German war-vessel *Kaiserin Augusta*, recently at Crete, has been detached from that service, and has entered the Suez Canal *en route* to China to reinforce the German Squadron in Chinese waters. It is understood that the *Gefion* and another war-vessel will also shortly be despatched to China.

The *Standard*, a Berlin journal, states that Germany informed Russia, Austria, and Italy last spring of the intention to acquire a Naval Station in China.

[Hongkong papers of the 12th inst. report the arrival there of the German war-vessel *Albatros*, which had been ordered to China from New Guinea.]

It is reported that Prince Henry of Prussia commands a squadron ordered to China. It is believed that Germany is resolved to retain possession of Kiao-chow.

Berlin, Nov. 24.

The *Kaiserin Augusta*, which has been the only German warship in Cretan waters, has sailed for the Far East. It is reported that the *Deutschland* and the *Gefion* will also be ordered to proceed to the same destination. These three ships will probably form a second German Squadron in the Far East under the command of Prince Heinrich of Prussia.

[This confirms Reuter's telegrams on the same subject. The *Kaiserin Augusta* is a 1st class cruiser of 6,331 tons displacement, with a speed of 22.5 knots; the *Gefion*, a 2nd class cruiser, 4,207 tons, 20 knots; and the *Deutschland*, a 1st class armoured cruiser, 7,310 tons, 14.5 knots.—Ed. J.T.]

ADDITIONAL DEMANDS OF GERMANY.

Peking, Nov. 25, 1.20 p.m.

Received by the *Fiji* at 11.40 p.m., Nov. 25.

Germany has made an additional demand from China, consisting of a concession for laying railways in Shantung and for working mines in that province.

CALAMITIES IN AUSTRALIA.

London, Nov. 23.

A great fire has occurred in the business quarter of Melbourne, and the damage is estimated at fully a million sterling.

North-west Victoria has been visited by a terrific dust-storm, through which several towns have been completely wrecked.

RUSSIA AND TURKEY.

Owing to representations by Russia, the Turkish Naval Reorganization scheme has been postponed indefinitely, Russia having presented to the Porte a Note demanding payment of the arrears of the war indemnity amounting to a million.

INDIA COUNCIL BILLS.

Tenders are invited to be sent in on the 29th instant for two and a half millions, for a period of six or twelve months, for India Bills dated December 3rd in amounts of one, five, or ten thousand.

AFFAIRS IN THE SOUDAN.

Mutinous Soudanese having aided the Mahomedan brigands of Ammached, Major Macdonald's force at Isoga was repulsed after several hours' fighting, with a loss of one hundred, the British loss being sixteen killed, including Lieutenant Fielding and Major Thurston.

This news is regarded as very serious. A force of Sikhs from Mombasa is hastening to the support of Major Macdonald, and H.M. ships *Thrush* and *Phæbe* are guarding the coast.

Later news states that Uganda is quiet, the garrison there having yielded up their arms.

DESTRUCTIVE FIRE AT HAKODATE.

(FROM OUR OWN CORRESPONDENT).

Hakodate, Nov. 26.

Fire broke out in Benten-machi at 2 o'clock this morning and before it was extinguished 60 houses were destroyed.

(FROM THE "N.C. DAILY NEWS.")

INTERPORT CRICKET MATCHES.

Hongkong, Nov. 15.

Playing to-day against The Straits, the combined Hongkong and Shanghai team scored 86 in the first innings and 62 in the second. The Straits thus winning by an innings and 233 runs.

(FROM TONKIN PAPERS.)

THE ENGINEERS' STRIKE.

Paris, 3rd November.

The engineers' strike in England continues to extend.

THE PARIS BUTCHERS' STRIKE.

Paris, 4th November.

The butchers' strike continues. The dispute has been submitted to the arbitration of the Juge de Paix.

ASSASSINATION AT RIO DE JANEIRO.

Paris, November 6.

At Rio de Janeiro the Minister for War has been killed by a soldier who mistook him for the President of the Republic.

(FROM THE "CHINA MAIL.")

THE NEW DEPUTY INSPECTOR-GENERAL.

Shanghai, Nov. 12.

It is reported here that Mr. Robert Bredon, lately Commissioner of Customs at Canton, has been appointed Deputy Inspector-General of the Chinese Imperial Maritime Customs.

CYCLING ROUND THE WORLD.

Messrs. Lunn, Lowe and Foster, the three cyclists who are touring round the world, arrived safely at Chungking after a difficult journey overland from Bhamo. Through Yunnan and Szechuen they found the roads unsuitable for cycling, and had to carry their machines most of the way and at times were carried in chairs themselves.

They are in good health, and have had no adventures and no difficulties except those arising from a lack of knowledge of the Chinese language.

They say it is their intention to cycle from Chungking to Shanghai along the Yangtse Valley.

(FROM THE JAPANESE PAPERS.)

GERMANY AND CHINA.

Peking, Nov. 22.

With regard to the occupation of Kiaochow Bay by three German men-of-war and a landing party, the Chinese Government has instructed the local troops to oppose the latter.

The claim of Germany against China is composed of six articles. They include a claim for 600,000 taels compensation to the families of those massacred, the payment of the cost of the dispatch of war-vessels, and the punishment of the local officials.

The Chinese Government has requested the withdrawal of the German force from Kiaochow Bay prior to the opening of negotiations with regard to the claim of Germany.

Peking, Nov. 22.

The six items of the German claim against China are as follows:—(1) That China shall pay 600,000 taels compensation to the families of those massacred. (2) That the cost of dispatch of three men-of-war shall be paid. (3) That the local officials be punished severely. (4) That the perpetrators of the murders be arrested and executed. (5) That payment be at once made for compensation for damage sustained by the Hennen (?) affair. (6) That the Chinese Emperor shall write an autograph message to be framed and hung in the Church. Germany does not demand any cession of land.

Peking, Nov. 23.

The German Minister has declared that Germany will never evacuate Kiaochow Bay unless China accedes to her claims.

KOREAN FINANCES.

Sōul, Nov. 25.

Owing to the still unsettled affair between Mr. Brown and Mr. Alexieff the finances of Korea have been getting out of order, and after the repayment of the loan to Japan the Treasury is exhausted. It is rumoured that Mr. Alexieff is negotiating for a loan of yen 3,000,000 from Russia.

JAPANESE NAVAL MOVEMENTS.

Kobe, Nov. 26.

The war-ships *Itsukushima*, *Isumi* and *Suma* arrived here yesterday from Kure. H.I.H. Prince Arisugawa, Commander of the Standing Squadron, is on board the *Suma*. The fleet will start for Shimizu on the 29th inst.

OTARU HARBOUR.

Otaru, Hokkaido, Nov. 26.

An investigation council for the construction of a harbour at Otaru will shortly be convened.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at 184, Creek-side.

The Tokyo Chess Club holds its meetings at 3, Uchi-Saiwai-cho Ichome (next to the Tokyo Club).

PROBLEM NO. 348.

By OTTO FUSS, Hanover.

White to mate in three moves.

FREE INSTRUCTION CLASSES.

It seems curious that in a Foreign community of the size of Yokohama and comprising so many cultivated people, there should be comparatively few chess players. No doubt there are many folk who have never had the opportunity of learning the game and but for that chance would probably be as great enthusiasts as any of the followers of Caissa. Others again who have had an opportunity were frightened off by the silly idea that ignorant always will spread abroad, that chess is such an exceedingly difficult game to learn. True enough it is not easy to become an expert. But to acquire the rudiments of chess, to be able to play a game correctly, i.e. without offending against the laws and rules, and to enjoy such a game, this requires but little study, less in fact than is required in learning whist and other games of chance and skill.

Animated with the desire of doing the utmost to make the game more popular in the Far East, we propose giving a series of lessons next month provided that a sufficient number of pupils come forward. The lessons will be gratis, and all that is required in return is regular attendance. The committee of the Yokohama Chess Club having kindly placed one of their rooms at our Chess Editor's disposal instructions will be given there twice a week, viz., Monday and Thursday, from 6 p.m. Persons wishing to join the class are requested to send in their names at once to the Chess Editor.

OVER THE CHESS BOARD.

A correspondent requests us to call to his mind the opening moves of a neat little trap that we once tried on him successfully. Although the same is doubtless known to many players it may be new to some of our readers and come in useful in "skittle play." The game begins as follows:—

1—P to K 4
2—Kt to K B 3
3—B to B 4
4—Kt takes P

1—P to K 4
2—Kt to Q B 3
3—Kt to Q 5

This is the fatal move after which white must at least lose a piece. But as a rule he is unconscious of the danger threatening and loses the Queen

besides or gets mated in a few moves. For instance:—

5—Kt takes B's P 4—O to Kt 4 (I)
6—R to B sq. 5—O takes Kt's P
7—B to K 2 6—O takes K's P ch.
7—Kt to B 6, sm. mate
if however
5—B takes P ch the following sometimes
takes place:—
6—B takes Kt 5—K to K 2
7—R to B sq. 6—O takes Kt's P
7—O takes K's P mate
There are many more interesting variations which
will amuse the skilful player.

Equally pretty are the two following well known
little games in which mistake and the punishment
thereof are clearly traceable (with notes by
Lasker in "Common Sense in Chess"):

I.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—P to Q 3
3—B to B 4 3—P to K R 3

So far with the exception of the last move, Black
has played quite well. He has opened lines for
his two Bishops and the Queen, and now should
bring out his Q Kt to B 3. Instead of that, afraid
of some premature attack, he quite unnecessarily
makes a move that does not give additional force
to any of his pieces.

4—Kt to Q B 3 4—B to Kt 5

A mistake. The Knight should be first develop-
ed, then the Bishops:—

5—Kt takes P 5—B takes Q
6—B takes P ch 6—K to K 2
7—Kt to Q 5 ch mate

II.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to K B 3
3—Kt takes P 3—Kt to Q B 3

Black evidently believes in the principle of quick
development, and even neglects to take White's
K P, in order to gain time.

4—Kt takes Kt 4—O P takes Kt
5—P to Q 3 5—B to Q B 4
6—B to Kt 5

A mistake; he ought to guard against the threat-
ened Kt to Kt 5 with B to K 2. Now he is over-
taken by a catastrophe.

6—Kt takes P
7—B takes Q 7—B takes P ch.
8—K to K 2 8—B to Kt 5 ch mate.

YOKOHAMA CHESS CLUB.

Two of the five challenge matches in the
"Ladder" Tourney have been decided. Storne-
brink and Hodges met last week in their second
game, and another victory resulted for the latter,
thus deciding the match in favour of the challeng-
ed party, Mr. Hodges. The second game in the
match Mendelson v. Friedlander was played on
Thursday night with similar result, the challenger
losing the game and the match. Mr. Mendelson
has improved immensely since last year and
should by further challenges be able to work him-
self into Class II. before the end of the season.
The match, Thomas v. Fox, has also begun, the
first game being played on Thursday night. Mr.
Fox won after a good struggle on the part of his
opponent.

Competitors likely to enter for the Champion-
ship Tourney include Messrs. Griffin, Tennant,
Friedlander, Pullak, Fox, and Mendelson.

GAME No. 348.

FROM THE BERLIN TOURNAMENT.

RUY LOPEZ.

White.—Tschirorn.	Black.—Janowski.
WHITE. BLACK.	WHITE. BLACK.
1 P K 4 P K 4	13 KixP(c) KixKt
2 Kt KB3 Kt QB3	14 OXKt(d) PxP
3 B Kt5 Kt B2	15 PxP B B3
4 Q K 2 B K 2	16 K Q 2(c) R K sq
5 P Q 3 P Q 3	17 Q B 3 P R 5

7 R B sq Kt Q 5(b)	19 P Q 4 BxP
8 KixKt PxKt	20 QR Kt sq
9 Kt K 3 P B 3	(w) BxP ch
10 B QB 4 P Q 4	21 K Q sq(h) B K Kt 5
11 B K 3 P QR 4	22 Resigns
12 P QB 3 PxKP	

Notes (abridged) by Emil Kemeny.

(a) The usual play is Castles, followed by P to
Q 4, or P to Q 4 at once. The text play is more
conservative, yet in many cases leads to the win of
a Pawn. The move made, B to K 2, is also satisfac-
tory.

(b) The play causes the doubling of Black's Q
P, but it seems justified, for it prevents White
from Kt to K 3 or B to K 3.

(c) Much better was P takes P. Black could
not well continue P to Q 6, for he would finally
lose that valuable Pawn.

(d) A disastrous error, which accounts for
White's defeat.

(e) White should have played Castles, sacrific-
ing the Q B P.

(f) A powerful move, which leaves White with-
out satisfactory defence. He can not guard the
B P with B to Kt 2, for P to R 6 would follow.

(g) B to Kt 2 should have been played, followed
by Q R to K sq. It must be admitted, however,
that White's game was past recovery.

(h) He could not capture the Bishop on account
of R to K 7 winning the Queen. The text move
enables Black to win brilliantly.

PURE AND SWEET

and free from every blemish is the skin, scalp, and hair of infants, cleansed, purified, and beautified by

Cuticura SOAP

The most effective skin purifying and beautifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery.

For distressing facial eruptions, pimples, blackheads, red, rough, oily skin, irritations of the scalp with dry, thin, and falling hair, red, rough hands with shapeless nails, and simple rashes and blemishes of infancy it is incomparable. Guaranteed absolutely pure by analytical chemists of the highest standing, whose certificates of analysis accompany each tablet.

Sold throughout the world. British depot: F. NEWBERRY & SONS, 1, King Edward-st., London. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A. Send for our "Treatment of Baby's Skin," a book of 64 pages, fully illustrated, containing all that every intelligent mother should know about the Skin, Scalp, and Hair, post free.

MOTHERS!

MOTHERS!

To know that a warm bath with CUTICURA SOAP, and a single anointing with CUTICURA, the great skin cure, will afford instant relief in the most distressing of itching, burning, and acrid infantile rashes and irritations of the skin and scalp, and not to use them, is to inflict your duty. This treatment means comfort and rest for parent as well as grateful relief and refreshing sleep for child, and is pure, sweet, safe, speedy, and economical.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomed to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Nooklands," No. 150, Bluff, Yokohama, SATURDAY, NOVEMBER 27, 1897.

YOKOHAMA: SATURDAY, DEC. 4TH, 1897.

MARRIAGES.

On 5th November, at H.B.M.'s Consulate, Cheloo, by L. C. Hopkins, Esq., and afterwards at St. Andrew's Church, by the Rev. H. Mathews, FRIDERICK WILLIAM, eldest son of the late Capt. John Godsil, of the Chinese Navy, and formerly in H.B.M.'s Navy, to JANE FANNY, eldest daughter of the late Edward Finch Outaway, of the Imperial Maritime Customs Service.

On November 23rd, at H.B.M.'s Consulate-General Shanghai by Sir Nicholas J. Hannen, and afterwards at the Cathedral by the Rev. H.C. Hedges, M.A., HARRY CLAPP, of Shanghai, to AGNES BESSIE, second daughter of John Youngs, GOULD of Shanghai.

On the 23rd Nov., at Union Church, Hongkong, by the Rev. G. J. Williams, DUNCAN CLARK to DAIST, Daughter of D. R. Crawford, Esq.

On the 24th November, at H.B.M.'s Consulate-General, Shanghai, by Sir Nicholas J. Hannen, and afterwards at the Cathedral by the Rev. C. J. Symonds, M.A., FRIDERICK ALBERT, youngest son of the late Antony Fred. Sampson, of Hongkong, to MARGARET LUCAS, second daughter of James Phillips, F.C.S., of Clifton, Bristol.

DEATHS.

At Singapore, on the 19th Nov., ROBERT TRISILLIAN, Hongkong and Shanghai Bank.

At the General Hospital, Shanghai, on the 24th November, 1897, EDWARD ROSQVIST, Yachtsman Pilot, aged 56 years.

On the 28th inst., at the International Hospital, Kobe, H. F. SOMMER, late Captain China Mutual Steamship Navigation Company's steamer *Oopack*.

SUMMARY OF NEWS.

RINDERPEST has broken out among the dairy cattle at Shinagawa, Tokyo.

Two men were killed by a landlip at a brick factory in Ikuta-mura, Kanagawa Ken, on the 25th ult.

A FIRE occurred at Rijiri-gun, Teshio province, Hokkaido, on the 19th ult. by which 120 houses were destroyed.

MR. DE SPREYER, formerly Russian Consul-General at Seoul, has been appointed Russian Minister to China.

SIR HENRY ARTHUR BLAKE, K.C.M.G., Governor of Jamaica, has been appointed Governor of Hongkong.

THE total amount of gold exchanged from the 1st of October to the end of November last was yen 10,266,655.

WILLISON'S CIRCUS opened in Yokohama on Thursday evening, the 2nd instant, and will perform for ten days.

THE British Vice-Consulate in Tokyo has been closed, all the Consular business having been transferred to H.B.M.'s Consulate at Yokohama.

THE demands of Germany on China include the payment of a large indemnity, the erection of a mission, the punishment of local officials, &c.

THE Nippon Yusen Kaisha has lost 400,000 yen on the working of its foreign lines in the last six months and has been unable to pay any dividend.

A DEPUTATION of *saké* brewers presented a petition to the Minister President on the 30th ult., protesting against the proposed increase of the tax on *saké*.

THE Akiha Prefectural Assembly proposes to construct a harbour at Funakawa at a cost of 10 million yen, 9 million of which it expects to get from the Government.

FROM January to October last, 92 companies in Japan were dissolved, while those obliged to reduce their capital owing to non-payment of calls on shares exceeded 50 in number.

JANUARY 11th of next year being the first anniversary of the death of the late Empress Dowager, religious services will be conducted at the Palace and the Senzan Mausoleum, Kyoto.

THE battle-ship *Yashima* arrived at Yokosuka from England on the morning of the 30th ult. She is of 12,517 tons displacement, with a speed of 19½ knots, and is reported to have cost yen 10,910,970.

A TERRIFIC gale has swept the British coasts, resulting in the loss of two vessels with all hands, besides thirty others being wrecked. The piers at Broadstairs and Sheerness have been destroyed.

A meeting of influential merchants was held in Tokyo on the 1st inst., when a resolution was passed to instruct their Representatives in the Diet to oppose the proposed increase of taxation on land and *saké*.

THERE has been a very sensational scene, ending in a free fight, in the Austrian Reischrath, and the Austro-Hungarian Ministry has resigned and Baron Gautsch, late Minister of Education, has been entrusted with the formation of a new cabinet.

THE graduation exercises of the Military College at Ushigome, Tokyo, were held on the 29th of November in the presence of H.I.H. Prince

Kan-in; Marshal Marquis Yamagata; General Takashima, Minister of War; and many other distinguished personages.

THE Crown Prince is to take possession of Prince Arisugawa's Palace at Kasumigaseki, the latter Prince probably removing to the late Count Goto's residence at Shiba, which has been purchased by the Imperial Household Department.

SOME people at Kamakura, Sagami Province, are planning the erection of a museum to be called the Kamakura Museum at a cost of yen 3,000. According to the plan, all the rare curios now stored in temples and shrines, etc., in that neighbourhood will be exhibited in the museum.

It is reported that the remaining portions of the Civil and Commercial Codes, now in the hands of the Legislative Bureau, will be laid before the coming session of the Diet as its first business and will be put into force from about the 1st of May next year, should they pass both Houses.

In response to an agitation raised by the jinrikisha owners and coolies in Yokohama, the Governor of the Ken has submitted a measure to the Prefectural Assembly to reduce the tax on 'rickshas from 1.65 yen and 1.35 yen for double and single vehicles respectively, to 1.20 yen and 1 yen.

ACCORDING to investigations made by the Treasury, coins in circulation in Japan at the end of October last amounted to yen 87,387,114, showing a decrease of yen 3,362,655 as compared with the figure for the previous month, but an increase of yen 8,018,823 over the corresponding month of last year.

DEPUTATION of fishing corporations of Yokohama and Kanagawa visited the Kanagawa Prefectural Office on Monday and presented a petition against the proposed reclamation of the foreshore at Hommoku, Yokohama, on the ground that the waters in that vicinity are rich and productive fishing grounds.

SOME of the promoters of the Tōyō Kisen Kaisha (Oriental Steamship Company) are now desirous of dissolving the Company, having learned that the Nippon Yusen Kaisha has lost heavily on its foreign services, no dividend having been declared for the past six months, while the Kansai Steamship Company has become bankrupt, and several smaller steamship companies are in great difficulties.

THE Import market still continues utterly stagnant, nothing at all being done in cotton piece goods, fancies, yarns and woollens, with the exception of a few small sales of grey shirtings. There is a small demand for some lines of meta's, but at considerable reductions from quotations. Kerosene should be selling well now, but the block on the railway lines impedes business. There has been a steady moderate business doing in sugar, the only import which shows any vitality. In the Export market there have been fair purchases of silk, at slight reductions from former prices, but the market closes firm. A little has been done in tea of the lower grades, but it is reported that the Canadian Government has put a veto on the import of the commonest qualities and this has had the effect of stopping purchases to some extent. The cotton spinners have fortunately been relieved of some of their surplus stock of yarn, and though one bank in Osaka has suspended payment and others are shaky, there appear to be better prospects of tiding over the difficulties in economic circles than looked probable a few weeks ago.

SPIRIT OF THE VERNACULAR PRESS.

The Kiao-chow incident naturally engrosses the attention of the vernacular press. The latest utterances of the *Fiji Shimpō* on the subject are of the most scathing character. Our contemporary assumes that the demands said to have been preferred by Germany are rightly reported, and describes them as beyond all reason, but of course attaches little importance to them in comparison with the method adopted by Germany to enforce them. Here, also, the *Fiji* accepts the theory that the seizure of Kiao-chow was not preceded by any negotiations with Peking, and reviewing the incident in that light, compares Germany to a creditor who, without calling upon his debtor to pay or giving him any intimation that pressure was about to be employed, should repair to his bed-side, armed with sword and spear, and demand the immediate settlement of the claim in whatever form the claimant chose to present it. The inference to be drawn from the affair is that the provisions of international law and the tenets of international morality have ceased to be anything more than specious pretences in the eyes of Occidental Powers, and that the rule by which their conduct is really regulated is "the flesh of the weak for the food of the strong." Germany has thrown off the mask and shown herself in her true colours. It is of use for onlookers to bewail the fact, however shocking they may find it. Their duty as sensible persons is to recognise the unsightly truth: to recognise that Western Powers, in the fierce struggle for existence, have long turned greedy eyes towards China, and are only waiting for an opportunity to devour her. How does that conviction concern Japan? It is true that the conflagration is on the other side of the river, but it is also true that the river is a narrow one and that the sparks may easily fly across. The lesson for Japan is that a country's security depends solely on its strength to resist aggression, and that aggression has come almost to her own gates. Neither will it suffice that she should merely be able to act on the defensive. To preserve what one has already, it is sometimes necessary to add to it. There is no doubt that something very like a crisis in the affairs of the Orient now confronts Japan. She has no longer time for petty struggles between so-called "clan statesmen" and popular leaders; between political and official cliques. Her whole undivided strength must be devoted to guarding against the perils that menace her.

The *Nichi Nicht Shimbun* also believes that Germany has seized Chinese territory by way of preliminary to preferring demands at Peking, and points out, in emphatic but comparatively moderate terms, the marked departure from the law of nations that such a course indicates. It ceases, in fact, to retain the semblance of international obligations and assumes the character of armed aggression based on a mere pretext. If China complies with Germany's demands, thereby removing the latter's excuse for the occupation of Kiao-chow, and if Germany withdraws her squadron, the matter will cease to have any direct concern for other nations. But if reasons are evolved for the permanent occupation of Kiao-chow or some other position, it will be impossible for the world to look on silently. Considering that Russia had already made some kind of arrangement with regard to the use of Kiao-chow Bay, there is strong reason to suspect that Germany and Russia are acting in concert on the present occasion. However that may be, Germany's action must be viewed in the context of the aggressive spirit shown during recent years by European nations; a spirit that has led and is leading to gradual and steady encroachment upon the East. Whether by actual acquisitions of territory or by military demonstrations, the Occident plainly displays its mood toward the Orient, and the significance of such a step as that now taken by Germany is not merely that it places her in possession of a part of China, but that it gives her a basis for undertaking further aggressions. It is Japan that has the

greatest interest in these things, and the Japanese Foreign Office should lose no time in obtaining from Germany a clear *exposé* of her views and requirements. Passing on, then, to examine the circumstances in which European Powers find pretexts for their eastward movement of aggression, the *Nichi Nicht* concludes that the maladministration of national affairs and the domestic disturbances that torment and paralyse Oriental countries, furnish the principal, if not the sole, grounds for Occidental interference; from which conclusion our contemporary naturally advances another step to urge upon Japan the advisability of strengthening her military resources and striving for national unity.

There is nothing in this crisis, according to the *Mainichi Shimbun*, that should alter the views of the nation with regard to its own armaments. If the discussion now prevailing were directed towards reducing the *post bellum* programme of expansion as a whole, then the aggressive action of Germany in China would put an argument into the mouth of the advocates of expansion. But the *Mainichi* claims that its own contention is directed solely to the want of equilibrium between the scheme for the Army and the Navy. So far as the Navy is concerned, its development to a higher degree than that contemplated by the present programme, is approved by those that urge the advisability of reducing the scheme for the Army. Two years' trial has proved that the national finances will not bear the strain to which they are subjected by this large plan of Army expansion. (The *Mainichi* does not explain how the finances would be relieved by cutting down the Army programme if a still larger development of the Navy is to be simultaneously undertaken). Moreover, all experience goes to show the superior utility of a navy. Germany has an immense army—four hundred and ninety thousand men on the peace footing and three millions for belligerent purposes—yet it is by means of her naval squadron that she has made the present *coup*. France, also, is conspicuous for military strength, yet, in her struggle with China twelve years ago, she was unable to use her soldiers and made a poor business of it through want of a more powerful fleet. Again, the pressure brought by the Three Powers to compel the retrocession of Liaotung was a naval pressure. Everything, in short, points to the value of a navy for offensive and defensive purposes. The nation must not allow its reasoning powers to be obscured by the alarm of the present moment. Whatever weight the arguments in favour of reducing the Army expansion programme possessed a month ago, they possess the same, or even greater, weight to-day.

The *Kokumin Shimbun* speaks in very eulogistic terms of the advantages offered by Kiao-chow as a naval port. Its possessor can effectually oppose the union of northern and southern China; can cut the Middle Kingdom's strength into two separate parts; can make easy descents upon the coasts of Tsushima and Korea, and is in close touch with Port Arthur, Talien, and Wei-hai-wei. Whether Germany seized Kiao-chow before preliminary negotiations with Peking for the satisfaction of her claims, seems difficult to determine accurately. (The *Kokumin* here sets down the dates and the sequence of events so far as they are yet known.) But there is strong reason to suppose that Germany is not acting alone. She has no means of exerting her military strength efficaciously at such a distance from Europe, and her Navy is comparatively weak. The plain inference is that she does not rely on her own resources alone. Then, again, it has to be remembered that Kiao-chow Bay had been lent by China to Russia, and its seizure by Germany without a previous understanding with Russia, would be incomprehensible. The *Kokumin* is disposed to conclude that this incident is a sequel of the Three-Powers' interference in the Liaotung affair, and that Germany, France and Russia are acting in collusion. Great importance, it thinks, attaches to England's attitude,

though rumour says that her Minister in Peking has refused China's appeal for assistance as a mediator. Under any circumstances our contemporary thinks that the significance of the affair must not be underrated by Japan, and that she must diligently prepare herself for all emergencies.

The *Nippon* finds in this crisis an opportunity to preach on its familiar text of the virtues of a resolute foreign policy. It asks the nation to consider two recent events. The first occurred in Manchuria. On the 6th of October, the crew of the Japanese ship *Chitose Maru* were attacked by Manchu bandits, five Japanese subjects were murdered and a quantity of Japanese property was stolen. On the following day, the crew of the Japanese ship *Eiju Maru* were similarly assaulted and stripped of all their goods. On November 1st, a mob of Chinese roughs attacked a German mission in Shantung, killed two of the missionaries and purloined or destroyed the property of the mission. What procedure was adopted by Germany and Japan respectively under these circumstances, precisely similar in character though different in degree, the outrage in Japan's case being much the more flagrant? Germany promptly sent a naval squadron to seize an important part of Chinese territory and hold it by way of guarantee for redress, thereafter preferring a set of drastic demands (the demands are here quoted). Japan simply instructed the Manager of the Trading Company in Vladivostok to require that the offenders should be arrested. She did not even open international negotiations as Germany did, nor did she send so much as one man-of-war, or one gun-boat. The answer she received was that the locality where the outrage had occurred was in the Nicolaieff jurisdiction, and that during the cold of the present season any attempt to search for and arrest the assassin and robbers would be attended with much hardship. Whereat she bowed meekly, and said, "pray take the necessary steps then, at your good convenience." Now Germany's procedure, continues the *Nippon*, is not for a moment to be approved in its entirety. On the contrary, it seems to have been in some respects flagrantly opposed to international law. But it was dictated by a resolution to protect the lives and property of German subjects in every quarter of the world; a resolution that contrasts most favourably with the indifference that the Japanese Government shows to that elementary obligation. The *Nippon* protests against being suspected of any desire to stir up international discord. It claims to be eminently desirous of establishing and preserving inter-state amity. But it avers that nothing tends to impair amity more than tame submission to insult and wrong, for genuine friendship is impossible without mutual respect. The point is cleverly elaborated so as to constitute a seemingly strong indictment against the present Cabinet.

The *Chuo Shimbun* does not concern itself to discuss the propriety of Germany's action from the point of view of international law. It passes immediately to the broader question, what interpretation must be put upon the incident? Four reasons combine to show that this is no sudden step on Germany's part, and that, although the murder of two missionaries has supplied an immediate pretext, she is in reality pursuing a long premeditated policy. The first reason is her jealousy of England's commercial preponderance. She is straining every nerve to cut into trade fields monopolized by England, and she thinks that the possession of a good basis of operations in China is essential. The second reason is to be sought in considerations of European policy. Not only does she look to provide in the Orient diversions which shall occupy the attention of the rival States in Europe, but she also hopes to establish in the East *ententes* and communities of interest that shall act as solvents of Western enmities. In the third place, there is the affair of the Liaotung Peninsula. The action of the Three Powers on the occasion seemed to be directed against Japan, but was in reality direct-

ed against England. It was inspired by a deep purpose, having for its end the gradual annihilation of British trade and maritime supremacy by means of a series of *coups* on the part of the three strong allies. An essential feature of such a programme was that each should reap some substantial reward for the doings of that time. Russia and France obtained their reward, but Germany did not, and she is now about to take it. Finally, the German Emperor's night-mare about an invasion of Europe by the yellow race must be included in the account. He seeks to strike timely blows which shall avert that peril. Arguing thus in a manner too detailed to be reproduced exactly here, the *Chuo* arrives at the conclusion that Germany and Russia are in collusion, a certain momentary coldness having sprung up between France and Russia in China, and that Russia will finally step in as mediator between Germany and China, Germany receiving a naval basis as she desires, and Russia obtaining a substantial reward, perhaps Liaotung, for her services. The *Chuo* sees no safety for the East except in an alliance between England and Japan.

The *Hochi Shimbun* has no doubt that the time for the partition of the Chinese empire has arrived. The catastrophe, it says, has long been foreseen. Japanese that went to Europe in the early part of the *Meiji* era, hastened home, in many cases, two or three years earlier than they had originally intended because they discovered the opinions prevailing in the West with regard to the partition of China, and were persuaded that Japan must lose not a day in adopting a positive policy of aggression, which would carry her into the ranks of the ruling Powers from the position of a helpless country inviting aggression. Many Japanese whose contact with European peoples opened their eyes to that fact, and who were consequently moved to deep solicitude on account of Japan, are now leaders of thought and of society. In France, in Russia, in England and, above all, in Germany the fate awaiting China has been understood for a long time. It is a mistake to say that the step taken by Germany in seizing Kiao-chow is due to the youthful impetuosity of the Emperor of Germany. It is, on the contrary, part of a deliberate policy entertained by Europe. If, indeed, the proximate cause of Germany's action be sought, it will be found in her disappointment that she alone of the Three Powers associated to bring about the retrocession of Liaotung has hitherto remained without reward. France has had her reward; Russia has had her reward; even England, which took no share in the proceeding, has reaped substantial gain. Only Germany remains out in the cold. An idea was recently promulgated by shallow publicists that Germany had appreciated her mistake in the Liaotung business, and was determined henceforth to be Japan's friend. There was no ground for such a hope. Germany merely bided her time, and it has now come. As for her behaviour towards China, it is beyond all discussion or condemnation. She has disregarded the most elementary principles of international law; has treated China as though no such thing as a Chinese Government or Chinese independence existed. Even if she had not shown that she deems the empire of China unworthy of the commonest consideration by seizing a portion of its territory and driving away its troops before any grounds of complaint had been formulated, her demands in connection with the murder of the two missionaries are extravagant. Nothing could be more unreasonable than to require that the Emperor of China shall openly extend to the Christian religion, an alien creed, the same mark of public approval that he bestows upon the teachings of Confucius and Mencius. The indemnity, also, demanded on account of the two deaths is of preposterous dimensions. It might be expected that other Occidental Powers would protest against the perpetration of such deeds. But they raise no objection, and are even disposed to encourage Germany. China's hour seems to have come. What shall Japan do? Shall she join in the scramble for pieces

of the doomed State, or shall she oppose its partition? It is most regrettable that at such a crisis in the country's foreign policy, a crisis the like of which has not occurred since the Restoration, the portfolio of Foreign Affairs should be in the hands of a man who does not know the nation's mind and in whom the nation has no confidence.

The *Tokyo Shimpō* concludes that the boasted civilization of the Occident is material civilization only: it does not extend at all to the region of morals. Western peoples call themselves Christian, but their Christianity is simply a convenient pretence. Right and justice are mere names in their dealings with the Orient. There is no parallel in history for the violent lawlessness perpetrated by Germany in seizing Kiao-chow in a time of peace without any preliminary discussion with China, and as for the demands that have been formulated in connexion with the murder of two missionaries—the demands for a great sum of money, for the privilege of building railways and working mines, and so on—, they defy comment. It is to be earnestly hoped that China will take heart. Let those two or three cruisers work their will. Let the German marines remain at Kiao-chow. Decline to hold any parley of any kind with Germany until she has abandoned her attitude of unpardonable aggression. She will tire of the game. To play it from such a long distance will soon exhaust her patience and her resources. Nothing, however, will wipe away the disgrace of her acts. The Chinese nation is not guilty because a band of robbers have committed a crime. If we come to consider where guilt really lies, it lies with Germany. For not merely has she met lawless violence by lawless violence, but whereas the sin on China's side was the sin of a body of bandits, the sin on Germany's side is the sin of Germany. To talk of the sacredness of human life is a farce. Suppose that the Chinese troops occupying Kiao-chow had not been cravens. Suppose that instead of avoiding a fight by running away, they had stood to their guns and defended their native soil against aggression. How many lives would then have been sacrificed by way of supplement to the deaths of the two missionaries? As for Japan, it is her neighbourly duty to succour China at the juncture. She fought China because the big empire's aggressions on weak, helpless Korea threatened to destroy the latter's independence. Can she now stand idly by while a Western Power takes advantage of China's weakness and helplessness to destroy her?

A much more moderate article appears in the *Yomiuri Shimbun*. It can not understand such procedure on the part of a Power usually so moderate as Germany in its dealings with the Orient and having such small interests at stake. After all, the murder of the missionaries in Shantung and the plunder of the mission house was the act of common bandits. Such incidents are happily unknown in Japan, but they are common enough in several other countries, and they are not regarded as calling for steps of the kind taken by Germany. Briefly speaking, the *Yomiuri's* attitude is one of hesitancy. It awaits Germany's explanation of her act. But it thinks that Baron Nishi is not showing sufficient vigour in seeking that explanation.

Several other journals discuss the same subject. The *Osaka Asahi* does not devote any attention to the phase of international law. It simply expresses the opinion that Germany, in view of her rapidly increasing commerce in the Orient, naturally desires to have a basis of operations, as England, France, Russia, Spain and even Portugal have, and has seized the present pretext to obtain such a base. The *Tokyo Asahi*, however, denounces the seizure of Kiao-chow in strong terms, but thinks that such lessons may possibly open China's eyes. The *Shogyo Shimpō* adopts a line radically different from that taken by any of its contemporaries. It recites the heavy debt of gratitude that Japan owes to Germany, from

which she borrowed her military system, her medicine, a great part of her constitution, and her system of local government. When she conquered China, she could not fail to remember that her victory was largely due to German instruction; and as she sees her medical men winning fame, her representative institutions working satisfactorily and her local government gradually getting into satisfactory condition, her debt to Germany is constantly recalled to her mind. She has only congratulations to offer Germany in connexion with the expansion represented by the seizure of Kiao-chow. She has also contracted thereby another debt to the Great Western Power, for by taking possession of Kiao-chow, it has given permanency to Japan's tenure of Wei-hai-wei.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for October, showing the foreign trade of the Empire for the month:—

	1896.	1897.
	SILVER YEN.	SILVER YEN.
Exports	13,544,662.820	17,993,977.190

COMBINATION OF THE LIBERALS
AND PROGRESSIONISTS.

There appears to be a tolerably strong movement in favour of uniting the Liberals and Progressionists on the old platform, the overthrow of the so called "clan statesmen." We can not say what degree of earnestness the project is likely to develop. So far as a campaign against the present Cabinet is concerned, we presume that the Liberals and the Progressionists will be found in the same camp without any preliminary arrangements on either side for coöperation. But the nation is getting pretty tired, we imagine, of temporary coalitions for purely destructive purposes, and of parties differentiated by persons only, not by principles. Something more than a brief *rapprochement* of the Liberals and Progressionists is needed to convince the public that a political machine capable of running the Administration has come into existence. We should expect that an appreciation of that necessity would present itself to the minds of business men first, and such seems to be the case, for nineteen business men of Miyagi Prefecture, headed by Mr. Sato Tsunejiro, have prepared and forwarded to the branch office of the Progressionists in that prefecture the following document:—

As business men we have hitherto stood aloof from political parties, and devoted our energies to the promotion of trade and industry. But the condition of affairs at present forbids us to keep silence any longer. We desire to urge the advisability of uniting the two parties of Progressionists and Liberals. Political parties, it appears to us, are a public instrument under representative government, and are not formed for selfish purposes. The differences that keep them apart should be differences of purpose and policy. But it appears to us that the procedure of political parties in our country is sometimes dictated by personal considerations, with the result that mistakes are made in grave national affairs, the peace of the provincial communes is disturbed and the progress of trade and industry is hampered. Unless an end is put to such a state of affairs, the future of the country can be foretold. Above all, at a time like the present when so many important problems press for solution, we can not but regard it as a source of profound regret from a national point of view that parties which have the same aims and the same policies should be held asunder by mere faction squabbles. We therefore entreat that, in deference to these considerations, the two Parties should lose not a day in uniting to secure the reality of representative Government.

A similar document, which we need not translate, was drawn up by the North-Eastern League (*To-hoku Domei kai*), and another in the same sense by the North-Eastern Anti-clan League (*To-hoku Hihambatsu Domei-kai*). On receipt of these documents, the Miyagi Branch of the Progressionists held a general meeting to deliberate upon the course to be pursued. The chairman pointed out that combinations of political parties being forbidden by law, the above letters could not be received or replied to by the Progressionists as a corporate body, but might be answered by individual members. He added that a radical union of the parties would call for consideration, but a union on the basis of anti-clan policy should not be attended by any obstacles. Much discussion followed, and it was finally decided that the duty of answering the documents as well as of arranging affairs in general, should be entrusted to the Managers of the Party.

COUNT MATSUKATA AND HIS
ADVISERS.

On the 26th instant, three prominent members of the National Unionists, Messrs Motoda, Wada and Saeki, waited on the Prime Minister, who received them very civilly. They handed to him a document of great length. Count Matsukata unrolled the portentous communication, and having glanced at its closing remarks, said:—"This appears to be a very lengthy document, but I have scarcely leisure to read it accurately. From the last clause, however, I infer that its gist is to recommend my resignation. Am I right in my conjecture?" Being answered in the affirmative, Count Matsukata added:—"I have undertaken the responsibility of administering the country's affairs, and I shall go on till I fall. I am sorry to render your visit fruitless, but I can not accede to your wishes."

To the above brief and becoming reply, may be added a statement attributed by the *Yiji Shimpō* to Count Matsukata:—"I have not the smallest intention of resigning, though rumour credits me with the idea. As for my policy towards the Diet, I am firmly resolved that no unworthy means shall be employed to obtain votes. Straightforward and unimpeachable courses alone shall be pursued. The Government will act in accordance with its convictions. The measures for increased taxation shall not be laid aside merely to humour the Diet. With affairs tending to dangerous developments as is now the case in the East, we shall not hesitate to ask for 30 millions, or even 40 millions if necessary. We shall be guided by our convictions of what is right in our management of the finance and of the administration, and, avoiding everything unconstitutional, we shall appeal to the verdict of thoughtful men throughout the empire. If we can not obtain the approval of a majority in the Diet, we shall have to dissolve it, but in the event of dissolution, the local governors will be summoned to the capital before the general elections, and will be explicitly instructed that the Government intends to maintain a strictly neutral attitude; that the slightest interference must be avoided, and that every political party must be treated exactly alike." There utterances of the Premier will be universally applauded.

THE WELCOME SOCIETY'S ADVISER.

It is said that nothing contributes less to the continuity of a correspondence than that one of the parties should post his letters in a disused pump. We may add that nothing contributes less to the intelligence of criticism than that the critic should fail to read the work criticised. Of the latter fact an instance is furnished by a Kobe journalist who recommends the Welcome Society to furnish information to tourists about the character of the various hotels and the scale of legitimate charges leviable by innkeepers. That is exactly what the Society does and what it has always done. If the Kobe critic had read the second article of the *Kihin-kai's* prospectus, he would have discovered that his advice, however well intended, was somewhat superfluous.

THE CAREW CASE.

We observe that one of our Yokohama contemporaries reproduces a paragraph from a journal (or periodical?) called the *Eastern World*, which, in a sentence of a hundred and forty-nine words broken by commas only, accuses the *Saturday Review* of having been bribed to re-open the Carew case. The editor who thus breathlessly pours out his sparkling scandal is, of course, not an Englishman. No Englishman is the victim of sufficient ignorance to originate such silliness. But why are these vulgar lies re-produced in an English local newspaper? Even those most confident in the justice meted out to Mrs. Carew must find their faith shaken when they observe the extraordinary prejudice against her that sways a section of this community. Not the slightest attempt is made to controvert the arguments that have been advanced in her behalf. Not the smallest notice is taken of the extraordinary gaps in the chain of circumstantial evidence on which she was condemned. But when a leading London journal ventures to express doubt whether her guilt has been fully established, it is at once sneered at for fatuousness or reviled for ignorance. These merciful critics, to whose sympathies no appeal is made by the thought of a most unhappy lady separated for ever from her children and doomed to pass the remainder of her life in a convict prison, seem to think that the only duty of an Englishman is to stand up for the infallibility of his courts of law, and to shout down any suggestion of a possible miscarriage of justice where British Judges and British Juries are concerned. The duty of an Englishman, forsooth! It is impossible to conceive anything more thoroughly un-English. Englishmen owe the excellence of their courts and the capable administration of their laws precisely to the habits of bold scrutiny and frank judgment that have characterized them for so many generations. The bare possibility that an injustice may have been done in such a case as that of Mrs. Carew—the alleged murder of her husband, the father of her young children, by a woman who had always showed herself, to him at least, an affectionate wife and to them a fond mother—the bare possibility of such a horror must be intolerable to every Englishman, and so far from denouncing those that desire to have the question probed and tested to the utmost, he should be ready to coöperate with and assist them. But there appears to be a kind of fanatical conviction among certain folks in Far Eastern settlements that to cast any shadow of doubt on the infallibility of a British judicial tribunal is a capital sin, a supremely unpatriotic act. They are quite ready to tear to shreds the reputation of their own diplomatic officials, to accuse them of sacrificing British prestige and pursuing a ruinously craven policy; they are quite ready to copy with apparent approval the wretched lies of foreigners who accuse leading English journals of accepting bribes to defeat the ends of justice, and who pretend that money can gild the blackest sin in England, but they insist that British Judges and British Juries shall be worshipped with the blind trust that a savage reposes in his fetiches. If such men happen to be empanelled upon a jury, our reverence for "the palladium" becomes a vanishing quantity.

MR. TAKANO'S ACCOUNT OF HIMSELF.

Mr. Takano has been interviewed in Osaka by a representative of the *Kobe Herald*, and the statements made by him to his interviewer occupy a column and a half of that journal. We confess to a feeling of regret that Mr. Takano does not better appreciate the value of silence, for if he publishes many accounts of the kind furnished to our Kobe contemporary, he will fatally impair his cause. The cause itself is good. Apart from the question of the applicability of the Constitution to Formosa, the Government would have been wise had it refrained most carefully from such a measure as the removal of the Chief Judge, for everything calculated to impair public confidence in the independence of the Judiciary is to be most strenuously deprecated. Friends of Japan are consequently disposed to hope that Mr. Takano's resolute attitude and the agitation produced by his resistance to the Authorities will have the effect of finally guaranteeing judicial officials against administrative interference. They must therefore regret to find him defeating that hope by displays of indiscretion and credulity. His story of himself is briefly this:—The devotion shown by common soldiers during the war with China had made him ashamed of drawing a high salary and doing so little work as devolved on him in his capacity of chief judge at Niigata. He was glad, therefore, to accept the more arduous post of chief judge in Formosa when the appointment came. Proceeding to Tokyo, he found that Mr. Mizuno, Director of the Formosan Civil Bureau, was recommending the Government to fill the judicial posts in Formosa with *shoki no furute gurai* (men of the type of worn-out clerks). He (Mr. Takano) protested, and contended that the Constitution must be considered to be in force in the island *de jure* and *de facto*—*de jure* from the moment that the Bagan Treaty was signed, and *de facto* because the expenditures and laws for Formosa had been submitted to the Diet. He claims that his opinion prevailed. At all events, he organized a judicial system for the island. After a time, corruption in official circles reached a climax, and Baron Nogi, the Governor-General, wanted to have the offenders punished, but Judge Takano wished to defer any punitive step until evidence could be collected against the principal offenders. Matters were precipitated by the arrest of some petty delinquents, and then seizure after seizure followed in quick succession. In the course of the examinations that ensued, conclusive testimony was obtained pointing to the guilt of at least one official of *Choku-nin* rank, but at that juncture Judge Takano was abruptly summoned to Tokyo and deprived of his office. In short, he was removed in order to prevent the inconvenient disclosures that would have resulted from the uncompromising steps he had inaugurated. He then describes how he declined to respect the order of removal; how he returned to Formosa; how he was directed to quit his court peacefully; how, on his refusing to do so, he was "pulled out by brute force;" and how, on his way down to Formosa prior to these final incidents, Mr. Kirkwood was a fellow-passenger. We think it worth while to quote exactly what he says about Mr. Kirkwood:—

Mr. Kirkwood, Adviser to the Judicial Department,

went by the same ship as I did to Formosa. The Premier seems to have entrusted him with the duty of finding some pretext, though with great difficulty, for insisting that the Constitution did not hold good in Formosa. Another mission of his (Mr. Kirkwood's) was to make a tour of the island, and somehow or other to dispose foreign residents in that island, who nearly all sympathize with me, to change their attitude. This I was able to gather from his interpreter and from other sources.

Now there is one part of this story that tells powerfully in Mr. Takano's favour, if he has not fallen into any misapprehension. We mean the reason that he assigns for his dismissal. Was he really dismissed lest his continuance in office should lead to inconvenient disclosures? If so, the public will support him. But we find great difficulty in believing anything of the kind. Even though we were disposed to believe it, the credulity and want of judgment that Mr. Takano displays in this interview would make us doubt the value of his testimony. Putting aside that point for the moment, however, every thoughtful person must at once ask how the removal of the chief judge alone could have the effect of checking the judicial inquiry. There were 22 judges in Formosa, and four of them sat in the High Court with Mr. Takano. According to the latter's account, he and his four colleagues were engaged investigating the question of corruption at the time of his summons to Tokyo. It follows, then, that the other four judges, equally with Mr. Takano, were in possession of the "conclusive evidence implicating at least one official of *Choku-nin* rank." Truly we do not perceive how the removal of the chief judge alone could put an end to the inquiry, especially since Mr. Takano alleges that his colleagues also were "resolved to punish the guilty, even if the guilt was brought home to men in the upper and highest circles." Then there was the Governor-General, Baron Nogi, whom Mr. Takano describes as "a man of upright nature," who "wanted the offenders arrested" and who pressed for speedy action against them. Are we to suppose that the Governor-General also was paralysed by the removal of Mr. Takano? These are obvious reflections that force themselves upon the attention of every reasoning person. With regard to the value of Mr. Takano's testimony, we pass over his remarks about his own motives in going to Formosa, over his very incredible charge against Mr. Mizuno, over the ignorance that he displays when he alleges that conquered or ceded territory necessarily comes within the scope of the Constitution's operation, and over the strange inaccuracy of his assertion that laws applicable to the island have been submitted to the Diet when within the past few days a whole body of such laws have been promulgated without any reference whatever to the Diet. We pass over all these things and come at once to his account of Mr. Kirkwood's mission. Mr. Kirkwood's mission to Formosa has no more to do with Mr. Takano's affairs, or with the operation of the Constitution in the island, than it has to do with the depths of the craters in the moon. If Mr. Takano can be so egregiously misled as he has been in this matter, if he has so little discrimination as to credit such foolish stories, and if he is so wanting in discretion as to publish them, we fear that his inferences about the reasons of the Government's action towards himself and even about the guilt of *Choku-nin* officials must be accepted with great caution. It is very far from our wish to make a case against him, for our sympathy is strongly with the

cause for which he is fighting and we admire the courage he shows. But common sense rebels against the conclusions he asks us to accept, and he destroys his value as a witness by his evident defects of insight. If he would adhere strictly to the simple fact that, whether the Constitution be operative in Formosa or not, the particular violation of it which is involved in the arbitrary dismissal of a chief judge calls for vigorous national condemnation, he would be pleading a fine case before a sympathetic tribunal. But a few more interviews like the above will convince the public that if the Government erred in removing him, it erred almost as much in originally appointing him.

MR. ISHIGURO & MAJOR-GENERAL PALMER.

In a report published by a local contemporary with reference to the new intake for the Yokohama Water Works, we notice that Mr. Ishiguro, an engineer of the Works, claims to have recommended the site now chosen at the time when the Works were planned, and alleges that his advice was over-ruled by Major-General Palmer, the engineer-in-chief. Mr. Ishiguro adds that the selection of the site advised by him, in conjunction with Professor Burton, would have saved fifteen thousand *yen* annually, as well as an initial outlay of a hundred and sixty-five thousand *yen*. It appears to us that Mr. Ishiguro's statements must have been wrongly reported, and since Major-General Palmer can not answer these misrepresentations from the tomb, we deem it a duty to correct them. It is to be noted, in the first place, that Professor Burton had nothing whatever to do with the Yokohama Water Works originally and was not consulted about them. The reason is very simple: he had not yet arrived in Japan. We are strongly disposed to think that Mr. Ishiguro himself never visited the intake until some years after the completion of the works, and that his knowledge of the matter was obtained entirely from the plans and researches of Major-General Palmer when they went before the Home Department, to which Mr. Ishiguro then belonged. As to that, however, we can not speak with absolute certainty. What is certain is that a Dutch expert, Mr. J. de Rijke, was the consulting engineer of the Home Department at the time, and that any comments referring to the plans of the Water Works came from him. Major-General Palmer gave the fullest consideration to the question of a site for the intake. He was naturally most unwilling to resort to a pumping station, and his first idea was to have the intake on the Doshi River, at, or near, the place to which it has now been transferred. But the difficulty was that the Doshi River—which we may remark, is a mountain tributary of the main river on the banks of which Major-General Palmer reluctantly located the intake—seemed to be subject to floods of such magnitude and violence that its variations of level defied any calculations within reason. In fact, all the evidence obtainable at the time assigned to the Doshi a character of such turbulence and mutability that no engineer would have been justified in relying on the stream for the purposes of an intake. Major-General Palmer was consequently compelled to choose a site free from dangers so serious. Since the opening

of the Water Works, however, the behaviour of the Doshi has been under constant observation from the pumping station which stands in the vicinity of its junction with the main river, and the records of eight years have shown that it is by no means such an untrustworthy stream as local tradition suggested. Events may prove, of course, that local tradition was right, but the point is that the placing of the intake on the Doshi River would not have been justifiable without the experience which has been collected since Major-General Palmer planned the works. We may add that no engineering enterprise of the kind having ever before been undertaken in Japan it does not appear probable that any Japanese engineer can have been competent to express an opinion such as Mr. Ishiguro, erroneously we imagine, is supposed to claim the credit of having advanced.

A Japanese engineer, Mr. Ishiguro, has seen fit to publicly claim for himself knowledge superior to that possessed by the late Major-General Palmer. His statement is that whereas he, in conjunction with Professor Burton, recommended a certain position for the intake of the Yokohama Water Works, Major-General Palmer over-ruled them, and chose a site which needlessly entailed not only an immediate outlay of over a hundred and sixty thousand *yen*, but also a yearly expenditure of some fifteen thousand *yen*. Mr. Ishiguro made this statement to a reporter of the *Japan Gazette* on the occasion of a recent celebration connected with a change in the site of the intake. That such a statement would never have been made had Major-General Palmer been alive, is practically certain. That it is a gross violation of the rules of professional etiquette observed among gentlemen, is absolutely certain. In view of these considerations, it seemed to us probable that Mr. Ishiguro had been misunderstood by the reporter. Such a hypothesis was far more conceivable than the idea that any engineer should have behaved with so scant courtesy towards a deceased colleague. The *Japan Gazette* declares, however, that Mr. Ishiguro's statement was made in writing and in the English language. On Mr. Ishiguro, then, rests the responsibility, for it would be idle to remind a newspaper like the *Japan Gazette* of the elementary principle that the memory of a distinguished Englishman ought not to be publicly traduced on the evidence of a Japanese who has not established any title to public confidence. So far as we are concerned, our hope that Mr. Ishiguro might be found to have been wrongly reported proves delusive. That is to be regretted for Mr. Ishiguro's sake, but it has nothing whatever to do with the accuracy of his allegations. It shows simply that he made the allegations. Yet so unjust are the local evening newspapers towards Major-General Palmer that the *Japan Gazette*, which published the libel, dismisses our explicit refutation of it as mere "copy," and the *Japan Herald* attempts to discredit our explanation by showing that we were mistaken in charitably conjecturing the possibility of Mr. Ishiguro's having been misrepresented.

Professor Burton had not yet come to Japan at the time when a site for the intake of the Yokohama Water Works was chosen. Mr. Ishiguro consequently fell into an error when he coupled Professor Burton's name with his own

alleged recommendation about the intake. Mr. J. de Ryke was at that time the foreign adviser of the Home Department, which had ultimate control of the enterprise. We therefore wrote:—"What is certain is that a Dutch engineer, Mr. J. de Ryke, was the consulting engineer of the Home Department at the time, and that any comments referring to the plans of the Water Works came from him." We did not say that comments had actually come from Mr. de Ryke. Our meaning was that if any comments were made, Mr. de Ryke, not Professor Burton, was the person to make them. Mr. J. de Ryke now writes to a contemporary:—"I never had anything to do with the Yokohama Water Works, and never have seen the intakes or the Doshi-gawa." We need scarcely point out that this disclaimer does not improve Mr. Ishiguro's position. He has now to show who the foreigner was that he confounds with Professor Burton. With regard to the general question, we may explain that Major-General Palmer was living in the house of the editor of this journal at the time of planning the Yokohama Water Works, that the subject of the intake was frequently discussed, and that the editor visited the site in company with Major-General Palmer. One would suppose that the desire of English local newspapers should be to guard the reputation of a distinguished fellow-countryman against aspersions of the nature in question, but the principles obeyed by Yokohama journalists are not to be gauged by any recognised standards of morality or patriotism.

TENURE OF LAND BY FOREIGNERS IN JAPAN.

One might be tempted to suppose, were such an idea conceivable, that a conspiracy exists among a certain number of foreign local journalists to shut their eyes, and induce the public also to shut their eyes, to the provisions of Japanese law applicable to foreigners after the Revised Treaties go into operation. The *Kobe Chronicle's* latest remarks on the subject of the tenure of land illustrate our meaning:—

Unless leases for a minimum term of fifty years can be obtained, the right to engage in manufactures and industrial undertakings, granted to foreigners by the new Treaties, will be to a large extent illusory. We understand this question, with others of a similar nature, has recently been under the consideration of the British Foreign Office, and now that Sir Ernest Satow has returned to Japan, something may be done in the direction of making the advantages obtained by a surrender of extra-territoriality of a more solid and substantial character than is promised by the somewhat vaguely-worded provisions of the Anglo-Japanese Treaty. It is certainly very important that a stand should be made against any restrictions by secret instructions to officials of rights conferred either by the present Treaties, or by those soon to come into force, and it is to be hoped the matter will form the subject of close investigation by the Foreign Representatives.

We need scarcely remark that when "secret instructions to officials" are brought upon the tapis, the question is removed from the realm of intelligent discussion into the sphere of suspicion and conjecture, whither we shall not attempt to follow it. As to the law, however, and the terms fixed by it for land-leasing, the whole subject was discussed exhaustively more than a year ago in connexion with Dr. Lönholm's synopsis of the New Japanese Civil Code. There ought, indeed, to have been no room for discussion. From the point of view of logic and reason, there was no room. But the doubters appeared to have resolved from the

outset that their own fancies must be substituted for the terms of the law which they undertook to discuss, and to deal exhaustively with their fancies demanded some space and involved some trouble. We nevertheless undertook the task, because it seemed important that the foreign residents should not be misled about a matter so closely concerning their industrial and commercial prospects after 1899. With apologies to our readers, we reproduce here one paragraph from our columns of October 1896, which sets forth the gist of the law in clear terms:—

The Civil Code, according to the interpretation of a thoroughly competent German expert, who has himself translated it from the original Japanese, creates a right called "superficies," which right foreigners will enjoy after the abolition of Consular Jurisdiction. A "superficiary" is a person who has acquired a title to occupy and use the land of another, for the purpose of erecting buildings or planting trees on it, such buildings and trees becoming the actual property of the superficiesary. As to the time of occupation, it may either be indefinite or fixed. If indefinite, the occupant may surrender his title whenever he pleases, subject to certain provisions concerning rent; moreover, either the occupant or owner, should the conditions of tenure prove practically irksome to either, may apply to a law court to have the period of occupation limited, and the court, on receipt of such application, is competent to fix the period at not less than twenty years and not more than fifty. If, on the other hand, the owner and the superficiesary agree at the outset to fix a period of occupation, they are perfectly free, so far as the Civil Code is concerned, to put that period at any number of years they please.

Surely it becomes almost phenomenal that, with access to perfectly clear information like the above, local journalists should still talk of the illusory character imparted to foreign manufacturing enterprise in Japan by the impossibility of obtaining land under a fifty years' lease. The law is there in black on white. Why do they not consult the law instead of clinging to a delusion long since exploded?

In this context we may note an interesting fact, namely, that a reaction has begun to manifest itself among educated Japanese against the restrictions hitherto imposed by public opinion on the ownership of land by foreigners and on their participation in the development of the country's industries. It is not easy, of course, to produce chapter and verse corroborating such a conviction, but the indications can not be mistaken by any one that has means of ascertaining the trend of general thought. In the years immediately preceding the war, the persistent reluctance of foreign nations to admit Japan to their comity created among the Japanese a morbid feeling of umbrage which gradually extended into every sphere, political, commercial, industrial, and educational, producing an unreasoning aversion to foreign aid or interference in any form. Then, when a victorious war suddenly raised the country to an unexpectedly high position among the Powers of the world, there naturally grew up a mood of over-weening self-confidence, and, at the same time, the large sums of money distributed among the lower-middle and lower classes, as well as the artificial stimulus that enterprise and speculation always receive at such times, helped to convince the people that they had no need either of foreign capital or foreign coöperation. But, on the one hand, Western States have abandoned their attitude of exclusion, and, on the other, the receding tide of unreal prosperity and fictitious affluence is now beginning to lay bare the hard facts of the situation, so that thinking men perceive that material expansion without capital is not more possible in Japan than it is anywhere else,

and that capital must be sought abroad. Whichever of these reasons be chiefly responsible for the wholesome change, we deem it certain that a more liberal sentiment is growing up with reference to foreign ownership of land and foreign exploitation of Japanese industries. There has, of course, been a great deal of very thoughtless and very silly writing on this subject; writing certainly not calculated to soften Japan's prejudices. It has been contended, for example, that the Revised Treaties embody a one-sided arrangement, inasmuch as the Japanese, while themselves enjoying the privilege of owning land in Occidental countries, withhold that privilege from every Occidental subject or citizen in their own country. Persons possessing any knowledge of such matters will not require to be told that the ownership of land by aliens is not permitted by all Occidental States, and that if, in certain cases, Japan can be charged with lack of reciprocity, in others she is only doing as she is done by. She ought, however, to emulate the example of the most liberal instead of deriving precedents from the narrowness of the least enlightened. Her whole experience of the foreign merchant and manufacturer shows conclusively that, while he does not work for love or set too low a price on his own capacities, incomparably the larger part of the fruits of his labour goes into Japanese pockets or inures to Japanese advantage. Whatever capital, intelligence or energy he can be induced to devote to the development of Japanese industries, is so much solid gain for Japan. The industries are hers and can not be taken away from her. Nobody inquires how much foreign money or how much foreign enterprise has contributed to build the huge fabric of British manufactures. They are British manufactures and they constitute a factor of British wealth—that is all that concerns Englishmen to know. The Japanese, we are glad to think, have begun to regard these questions in a manner consistent with the spirit of their modern progress.

ARMAMENTS EXPANSION AND THE BUDGET.

Supposing that the Budget for 1898-9 is thrown out by the House of Representatives next session—supposing that it does not "come into existence," as the Constitution says—the question that people are asking somewhat anxiously is, what will become of the Armaments Expansion Programme. The Constitution provides that, in such a case, the Budget of the preceding year shall be again adopted. But the expenditures contemplated for the expansion of the army and navy fall under the "extraordinary" section, and it has never been suggested that when the Budget of the preceding year is re-adopted under the circumstances we are now conjecturing, its extraordinary appropriations may be repeated in the same way as its ordinary. In opposition to such a course there is the general principle that the object of giving the Government power to adopt the Budget of the preceding year is merely to provide means for carrying on the ordinary business of the Administration; and there is the consideration that extraordinary expenditures are usually incurred on account of some special objects limited to the year for which the appropriations are made. We read in the *Fiji Shimpō*, however,

that the official view of this question is very definite. The Finance Department holds that the Diet has already passed the Expansion Programme *en bloc*, and that the outlays to be made from year to year until the end of the term are in the nature of "continuing expenditures," which do not require to be re-voted unless some change is desired to be made in them. That theory disposes of the difficulty effectually. The total expenditures on account of Armaments Expansion during the fiscal year 1897-8 are 80,645,721 yen, and the expenditures during 1898-9 are to be 63,256,225 yen.

DARING ROBBERY IN SENDAI.

There are some facts of a very startling nature that do not reach the ears of newspaper correspondents. Such is the incident we are about to relate. In October, 1890, the house of Rev. W. E. Hoy, of Sendai, was entered in the middle of the night by three armed men, who ordered him to open his money safe and allow them to take its contents, which amounted to 7,000 yen. Seeing that resistance was hopeless, he complied with their demand. It will scarcely be believed, however, that Mr. Hoy for over six years kept the robbery a profound secret, not even telling his wife of the terrible experience that he had undergone, and heroically bearing the loss without a murmur. Until last year he acted as the treasurer of his mission. The large sum of money stolen was to have been devoted to the building of a Mission School. The erection of the school was not interrupted by the misfortune, and the handsomest brick building in Sendai, the Tohokugakuin, was opened without a hitch of any kind, Mr. Hoy having borrowed money to make up the loss. Last year, however, before leaving for America, he had to hand over his books and affairs to the Rev. S. S. Snyder, and it became necessary to inform the latter of what had happened. This gentleman considered it his duty to acquaint the Mission Board with the whole affair. The Board held a special meeting at Harrisburgh, Pa., to consider the question, and by a unanimous vote took the following action:—

"Whereas, It has recently come to the knowledge of the Board that funds in the hands of Rev. W. E. Hoy, amounting to 7,000 yen and belonging to our mission in Sendai, were violently taken from his possession by armed robbers at night in October, 1890; therefore,

Resolved, That the loss which the mission sustained through the robbery of Rev. W. E. Hoy, as treasurer of the mission, be assumed and paid by this Board.

Resolved, That the treasurer be authorised to ascertain of Rev. W. E. Hoy the amount of the loss and pay the same.

Resolved, That a full statement of the case be made by the officers of this Board to the church, together with the action of the Board in the premises."

For the above particulars as well as for Mr. Hoy's letter herewith appended we are indebted to the *Christian World* of September 30th.

Sendai, Japan, May 19th, 1897.

Dear Dr. Callender,—Your sympathetic letter of April 22nd reached me this morning. I wish I might remain silent. Of the mission, Mrs. Hoy, Brother Schneider, Brother Gerhard, Dr. Moore, and Brother Layder, are the only ones, I think, who are aware of my misfortune; and in America a few confidential friends bear the matter on their minds. Mrs. Hoy was the first to be told of the affair, and that not till Feb., 1896. The facts are few, but they remain burned deep into my mind.

In October, 1890, one day, late at night, I heard

the familiar call, *Yubin*—mail—at the front door. As usual, without a thought of danger, I went to the door. There stood three masked men, each with the deadly Japanese sword thrust into close proximity with my head and breast. They demanded access to the mission safe. Refusal must mean death, and even obedience might mean the same fate. Nervous as I naturally would be under such circumstances, it took me some time to work the safe combination. During this ordeal I expected to be cut down any moment. After the door was opened the robbers soon helped themselves to the 7,000 yen—partly building fund, and partly mission funds, which I had placed there in various sums from time to time, as at that time there was a general scare about the banks in Japan. The men left without doing me any harm. Then, there I sat for hours before the safe. Words fail me to describe my feelings. For years I had toiled so hard and sacrificed so much for our school, and now in a moment all hope was gone. What would the Mission say? What would the Board be able to do? What effect would this loss have upon the church at home? And so on. At last I cried out, "Oh Lord, put the burden on me. Put the burden on me. The work must not suffer. I will bear the burden."

Thus for nearly seven years I have laboured on, and it has not been without its blessing. For some time I have realised the blessing of unreserved service to God. As my wife, several dear friends, and now the Board, assure me that it is not right for me to go on alone in this matter, I reluctantly give these facts. As to the exact sum to cover it all in gold, I cannot answer accurately. At the time exchange averaged about 80. This would make the 7,000 yen \$5,600 gold. But that does not express the real amount I have used to gradually reduce the sum, because since that time exchange has varied very much—once falling to .47. For some time it has been from .51 to .63. Just now it is .50. So the 7,000 yen just now would mean only \$3,500 gold. I have worked off all but about 2,000 yen, or as exchange runs about \$1,000 gold.

Your offer to help me and to reimburse me is certainly very kind, but, dear Doctor, if these facts should bring any obstacle whatever to the income and work of the Board I had rather toil on alone. The effect may be injurious to the cause, if you make the affair public; for, without discriminating, people may cry out, "Oh, the Japanese are not to be trusted," especially in the light of the Doshisha, and of our own present troubles in the evangelistic work. Consider first the good of the cause. I am not afraid to tread the wine-press alone. I see the end of it all. Be sure the work as now constituted will be carried on before you think of me.

Sincerely yours,

W. E. HOY.

There is a certain similarity between the above case and that of the ill-fated Dr. Large, who was killed in one of the residences attached to the Methodist Mission in Tokyo during the night of April 4-5th, 1890. The ostensible purpose of Mr. Large's assassins was burglary. Doubts were subsequently suggested as to their real motive, one suspicion being that they sought the life of Mrs. Large on account of some complications in connexion with the management of the girls' school over which she presided. But there has never been any solid reason to set up a theory other than that indicated by the conduct of the murderers themselves. They intended to rob the safe, in which there happened at that moment to be a sum of nearly seven hundred yen. They tied up the watchman and threatened to kill him unless he handed over the keys of the safe. The watchman having explained that the keys were in Mr. Large's keeping, and having indicated the latter's sleeping chamber, the burglars proceeded thither, and entered the room with drawn swords. It is the custom of Japanese burglars to carry their swords unsheathed when they possess such weapons, their idea being that the sight of the naked blade is calculated to intimidate and prevent resistance. As the two men entered the bed-room, Mrs. Large awoke, sat up and asked what was the matter. Immediately afterwards Mr. Large awoke also,

and springing up, rushed at the intruders. There was no interval of parley, no opportunity for intimidation. The burglars suddenly found themselves confronted by a desperately brave man who came at them open-handed but with all the strength and confidence that the best armour and the most effective arms could have inspired. Thenceforth it was simply a struggle on Mr. Large's part to seize the robbers, on theirs to disable or kill him. The end was inevitable. Mr. Large received eleven wounds, four of a fatal character, and his murderers made good their escape. In all this there is nothing to suggest that the original purpose of the two men was anything but robbery. Had they found only the timid obedience generally shown by unarmed persons in the presence of deadly weapons, there would not have been any killing. Their first impulse was to retreat, and it appeared from the evidence collected at the time that had not Mr. Large persisted in pursuing and attempting to grapple with them, he would have escaped unscathed, always supposing that he had been willing to give up the keys of the safe and, perhaps, to open it. We refer to the Large tragedy at this length because we are strongly tempted to suspect that the perpetrators of the Sendai burglary and the assassins of Mr. Large are identical. The two events were separated by an interval of six months only, and the methods in each case were singularly similar. Burglary with intimidation can scarcely be called uncommon in Japan, but burglary with intimidation where foreigners are the victims is limited, we think, to the two cases now under consideration, that of Mr. Large in April 1890 and that of Mr. Hoy in October of the same year. That fact alone would suggest a connexion between the two incidents. But there are other points of resemblance. In each case the treasurer of a mission was the victim. Is it not a fair inference that the burglars had some special relations with missionaries, and that they thus acquired knowledge enabling them to discriminate between the ordinary missionary, whose money-box is the last place in the world to attract a thief, and the missionary who happens to be in charge of mission funds? Then again the timeliness of the two crimes is remarkable. As a general rule the safe at the Methodist Mission in Tokyo would not have been worth robbing. But on the night of April 4th, 1890, it happened to contain the fees paid in by the scholars during the preceding three days. The burglars must have been well aware of that fact. In the Sendai case, although doubts as to the security of Japanese banks induced Mr. Hoy to keep in the safe a sum probably of such dimensions as to be always tempting, it chanced that a large part of the money lying there when the burglary took place would have been paid out on the following day. Thus the accuracy shown by the burglars in selecting their opportunity seems to indicate collusion with some of the *employés* of the Mission, and the same may be asserted with equal confidence in the Tokyo case. That the two incidents are not connected appears difficult to believe. From that point of view we think that Mr. Hoy's silence was singularly regrettable. Had he communicated the facts at once to the police, it is very possible that they might have obtained the very clue for want of which the apprehension of Mr. Large's murderers could not be effected. Indeed, from no

point of view is his silence defensible. To say nothing of the suspicions to which it will certainly expose the unfortunate gentleman himself, it evinced a singular indifference to public duty, since the immunity thus ensured for the burglars was more than likely to prompt fresh crimes. Even at this distant date, however, it is not impossible that the Sendai incidents may put the police on the track of the Large assassins.

ELECTRIC RAILWAYS IN TOKYO.

The vernacular press has a good deal to say about the three companies which are competing for the privilege of laying electric street-railways in Tokyo. There is the Ame-Kei clique, whose head is Mr. Amenomiya; there is the Fukuzawa clique and there is the Yoshida clique. The three may be said to have now joined forces, and various stories are told about the ways in which they came together, but we do not discover anything either interesting or extraordinary in the tales. The gist of the matter has been a partition of shares. Of course the shares will be very valuable: a 100-yen share may be expected to sell for 300 yen even before the cars are running. There is one obstacle, or possible, obstacle, namely, that the City Assembly may give permission for the building of ordinary street railways. We do not perceive that the prospect need greatly perturb the electric-car projectors, for there can be little doubt as to which system would command public patronage. The *Yomiuri Shimbun*, however, attributes to the Ame-Kei clique the intention of allotting three thousand shares to 30 members of the Assembly in order to prevent them from passing the railway bill. It ought to be mentioned that the same paper and other Opposition journals endeavour to connect Viscount Takashima in a discreditable manner with the electric-car project, and the whole business is thus enveloped in an unwholesome atmosphere, fictitious or genuine.

BRIbery IN THE HOUSE OF REPRESENTATIVES.

If a writer, having laid against the male residents of Yokohama the charge that they habitually go about naked, were to justify his accusation subsequently by pleading that some of them sometimes transact business in their shirt-sleeves, he would scarcely be accounted a person of very accurate deductions. The *Kobe Chronicle* takes pretty much the line of such a writer. A few months ago, it declared that "scarcely a single transaction takes place in Japan, from the sale of merchandise to appointment to official position, without squeezes being expected and paid," and that "the employment of bribery in the House of Representatives provokes stormy discussion only when all do not get their share." In other words, it laid against all Japanese merchants, all Japanese officials, and all Japanese members of the Lower House a charge of corruption. And now it finds justification for its wholesale accusation in the fact that a section of the Liberal Party are supposed to have "ratted" last session in consideration of monies paid to them by the Cabinet.

Another bad habit of the *Kobe* journal is the use to which it applies an opponent's

assertion. Recently, Mr. Taguchi Ukichi, a member of the Lower House, addressing a meeting of fellow-journalists and fellow-representatives, charged the Cabinet with bribing members, and as the meeting tacitly endorsed the allegation, we inferred that reason existed for the charge. The *Kobe Chronicle* "congratulates our contemporary on its conversion, seeing that it is only a few weeks since, commenting on inferences to a similar effect drawn by ourselves, it declared that 'such accusations do not require refutation.'" Yes, we did employ the words "such accusations do not require refutation," but we did not by any means employ them in the sense now alleged by the *Kobe Chronicle*. We employed them explicitly with reference to a charge that "the whole House of Representatives is corrupt." Our *ipsissima verba* were:—"We fail to see how the *Kobe Chronicle's* paragraph can be read except as an assertion that the whole House of Representatives is corrupt; that provided all the members get their share of a bribe, no protest is raised against bribery. * * * Such accusations do not require refutation." So, then, according to the *Kobe Chronicle's* logic, to admit that some members of the House may have been bribed is to be converted to the belief that the whole House is corrupt. It becomes a sort of philanthropic duty to warn our contemporary that it will do itself a serious injury in public estimation unless it tries to be more ingenuous. People do not care for controversial chicanery as an every-day dish: it palls upon the palate. They tolerate it now and then, just as they will sometimes visit a tent to see a juggling performance, but for common work-a-day existence they don't want butterfly tricks and thimble-rigging all the time.

THE SOCIAL EVIL IN JAPAN.

In publishing a letter from Mr. C. E. Garst on the above subject in our issue of the 1st instant, we were content to append a foot note expressing strong dissent from the figures quoted by him with reference to the number of prostitutes and *geisha* in Japan. Since, however, Mr. Garst's views are the views of a writer whose contributions to economical science lead us to expect some evidence of accuracy and reflection when he undertakes to deal with statistics, we do not feel justified in dismissing his criticisms with a mere note of exclamation. To us, indeed, who have devoted some attention to the subject, the error of his figures is at once apparent, but others may be disposed to accept with less scrutiny the arithmetic of a man conspicuous for love of calculation and analysis. To save such persons from being misled we propose to discuss the matter a little more fully. Mr. Garst writes as follows:—

As to the number of prostitutes in Japan, has the Editor of the *Japan Mail* ever read, "How is the Social Evil regulated in Japan"? The author seems to have studied the question. He calculates the regular licensed prostitutes at 500,000, and adds to this, at least a million *daruma* and *meshimori*, and 500,000 *geisha*, making a total of about 2,000,000, or 10 per cent of the female population of all ages of the entire country. I do not know about the quantity in other countries, but if the above doesn't fill one with horror, nothing will.

It would be a small matter, of course, that Mr. Garst, or any writer on Japan, should be misled by the figures of an investigator who has had the courage to challenge con-

tradition by publishing a book. But when the figures are of such a nature as to be absolutely startling, and when the most superficial examination shows them to be monstrously absurd, Mr. Garst's responsibility in accepting them and republishing them with apparent endorsement, becomes only a degree less than the responsibility of their original compiler. We have never seen the work entitled "How is the Social Evil regulated in Japan," but the extract selected by Mr. Garst, is quite sufficient to prove the worthlessness of the publication. Mr. Garst himself is a little astounded when he discovers that the estimate of two million prostitutes and dancing girls means one in every ten of the female population of all ages in Japan. But even that discovery does not make him pause. He, a statistician and economist, the apostle of the "single tax" doctrine, a man accustomed to put himself before the public as an expert in figures, finds no difficulty in accepting the idea that for every nine virtuous, decently living females in Japan, babies, children, mothers and grandmothers, there is one adult woman that lives by the wages of sin. We should not have imagined that the veriest tyro in statistics could have failed to look a little more deeply into a conclusion involving such an ethical curiosity. The first question that any ordinarily careful man would ask himself must be, how many females are there in Japan of ages adapted for the profession of prostitute or dancing girl, and how many males are there in Japan of ages adapted for consideration in this context. There is no difficulty whatever in making these calculations. We should have imagined, indeed, that Mr. Garst, who busies himself with problems of taxation and population in Japan, would already have made the calculations and would have been quite familiar with the results. There are 6,754,207 males in Japan from 18 to 45 years of age, and there are 7,845,538 females from 15 to 40. Thus, according to the figures accepted so implicitly by Mr. Garst, there is nearly one prostitute or *geisha* for every three men in Japan, and there is more than one woman living a life of shame for every three women that lead a decent life. It appears to us that Mr. C. S. Garst and the author of "How is the Social Evil regulated in Japan" may fairly claim the honour of being the most courageous statisticians that have ever addressed themselves to the public. Their credulity is beyond comment. Two million prostitutes and *geisha* represent a greater number than the total populations of the three cities, Tokyo, Osaka and Kyoto. Mr. Garst believes that if the prostitutes and *geisha* were collected from all parts of Japan the three capital cities of the empire would not suffice to contain them! What adds to the wonder of such silliness is that accurate, or, at any rate, fairly accurate, statistics are accessible to everybody. The total number of *geisha* in Japan is 55,359 and the total number of prostitutes, 114,430. Thus the aggregate is 169,789. It is a large number in itself, but by no means a large number in comparison with the figures for other countries. Besides, many persons will be disposed to question the justice of grouping the *geisha* with the prostitutes. Certainly a large proportion of them should not be so grouped. We need not discuss that point here, however.

Mr. Garst denies that when Colonel Bacon discussed this matter he "was

making comparisons between countries." Our original correspondent, "A Missionary," describing Colonel Bacon's speeches said:—"Notably he rebuked most fearlessly the shameful prevalence of the social evil." If that does not mean that Colonel Bacon declared the social evil to be conspicuously prevalent in Japan, it certainly suggests such a meaning and no other. Knowing that, in point of arithmetic, the social evil is no worse in Japan than it is in any Western country, and believing that Colonel Bacon had been sufficiently conscientious to ascertain the facts before he undertook to discuss them publicly, we imagined that the "shameful prevalence" of which he spoke, referred to the licensing of prostitution and to the peculiar conditions under which it is carried on in Japan. But it now appears that Mr. Garst was his companion on the tours of investigation which revealed such a shocking state of affairs, and we must therefore assume that Colonel Bacon shared Mr. Garst's remarkable faith in the two millions of abandoned women. He might well talk of "shameful prevalence" if he believed anything so prodigious. As for Mr. Garst himself, if he knows anything at all about the subject, he must know that two millions of abandoned women in a country of forty million inhabitants is phenomenal, unprecedented. We do not know how long he has been in Japan, but a directory of 1886 contains his name, so that he must have been here in 1885. Now he writes:—"The shameless exhibitions in the Yoshiwara and at Nagoya are things that almost petrified me when I first saw them a few weeks ago." It appears, therefore, that this "shamefully prevalent" social evil remained absolutely hidden from Mr. Garst's observation for twelve years. As a missionary, he must have been going about here and there among the people, yet he saw nothing of the social evil for twelve years, and would apparently never have seen it at all had he not gone to look for it. Is there no inference to be drawn from that fact? It seems to us that there is. It seems to us that the Japanese system must at least be credited with the advantage of not thrusting itself on the observation of any one unless he goes out of his way to observe it. Can the same be said of the social evil in any Occidental country? Mr. Garst speaks, however, of "the shameless exhibitions" that he witnessed. What were these "shameless exhibitions?" He saw a number of women, beautifully dressed, sitting in a row, talking, reading or possibly warming their hands at braziers; women behaving with perfect modesty. Apart from the purpose of their presence, not the smallest fault could be found with them; "shameless exhibition" appears to us a misleading term. Especially is it misleading when Mr. Garst couples it with denunciation of the "quality" of the Japanese prostitute. We are not entirely clear as to his meaning, but if he refers to the unhappy women themselves, he is very greatly mistaken. A few inquiries will convince him that a Japanese female condemned to lead a life of shame, manages with wonderful success to preserve herself from moral degradation except in so far as her very calling involves it, and maintains, with rare exceptions, a degree of modesty that deserves to be applauded.

We must ask Mr. Garst not to misunderstand the position we take in this matter.

It is not for one instant our purpose to deny that there are terrible abuses in Japan, and that earnest men like Mr. Garst and his fellow-workers may do much good by their efforts to effect reforms. Our own firm conviction is that the licensing of prostitution is the only sound system. We are further persuaded that the Japanese plan of relegating the evil to remote quarters of the cities and confining it there, is excellent. But the method of ranging handsomely apparelled women in rows behind latticed windows to be gazed at from the street is indefensible, and should be interdicted. Mr. Garst probably entertains a different opinion about the whole question. He may be right and we may be wrong. But assuredly he will never accomplish anything with the Japanese so long as he shows himself palpably unacquainted with the conditions of the problem as they exist in this country.

THE INSURANCE QUESTION.

Once more the insurance question troubles this community. The insurance agencies have combined to raise their rates, and of course they have the public at their mercy. In Kobe, also, complaints are heard. A correspondent of one of the Kobe journals draws a contrast between the excited protests penned and uttered when the Japanese washermen combined to increase their charges by fifty per cent., and the tame submission with which the conduct of the insurance clique is received. In Yokohama, however, there is a revolt. Some public-spirited men have invited fellow-thinkers to meet, and devise a scheme for becoming their own insurers. A few years ago, a similar effort was made by owners of Bluff property, but it failed to mature. The difficulties that stood in the way then will be equally formidable on this occasion, we imagine. A majority of the leading firms are agents for insurance companies and will, of course, set their faces resolutely against private competition of the kind contemplated. Yet there is unquestionably room for independent action. The case of the Meiji Fire Insurance of Tokyo shows what can be effected with a small capital and humble beginnings. The Company was established eight years ago with a capital of a million *yen*, two hundred and fifty thousand being paid up. Its statement of accounts for the year ended 31st March, 1896—the latest in our possession—showed that the premia collected during the year amounted to 217,210 *yen*; that the dividend paid was 10 per cent.; that 174,000 *yen* was carried forward and 67,000 added to the Reserve; that the company's investments and assets aggregated 584,000 *yen*, and that its expenses of management for the year had been 16,082 *yen*. That is the record of a company which works at rates presumably based on Western schedules. At all events it is a company ready to accept risks on foreign-owned houses and stores at the rates which the foreign companies now find too low. We do not understand the situation. Evidently the foreign agencies do not entertain any apprehension of Japanese competition, and, so far as we can learn, the Japanese companies have no particular desire to compete.

LESSONS IN MORALITY.

SOME lovely lessons in international morality are being preached in connexion with the Kiaochow incident. On all sides the worst possible aspect is attributed to Germany's procedure and the most preposterous defences are then put forward to justify acts of which we have no right to assume her guilt. So far as we know, the situation is simply this:—Two German subjects were massacred in Shantung; Germany demanded that certain measures of redress should be taken by the Peking Government; not obtaining immediate satisfaction, and being amply warned by the experience of other Powers that ordinary processes of diplomatic negotiation are futile in bringing China to book, she sent a naval squadron to seize the nearest port to the scene of the outrage, and she is now occupying that port as a guarantee for the execution of justice by the Chinese Authorities. That is the only view of the case that we have any right to take. There is some difficulty in understanding how negotiations with Peking can have preceded the seizure of Kiaochow, but the dates, as we have them, are not absolutely inconsistent with that sequence of events, and most assuredly unless we possessed incontrovertible evidence of the fact, we should be uttering a gross slander did we accuse Germany of having forcibly seized the territory of a friendly Power in time of peace without any manner of warning. The practical recognition of such a principle of action would at once put an end to the peace and security of international relations. It would expose every State to have its possessions plundered at the caprice of any other State which deemed itself strong enough to engage in depredations. The nature of the pretext would be entirely a secondary consideration, for if the aggressing Power is not to be under any obligation to formulate its grievance before having recourse to an armed raid, the quality of the grievance descends to about the same rank as that occupied by honour in *Joseph Surface's* conference with *Lady Teasle*. It is incredible that Germany should have set any example of that kind, but her alleged admirers have no hesitation whatever in believing that she has done so, neither does it seem to them at all libellous to assume that the murder of two of her missionaries by a party of bandits or fanatics in a remote region of China has been seized by Germany as an opportunity to consummate an act of territorial aggrandisement which, without a particle of right, she had for some time been endeavouring to accomplish in spite of the Chinese Government's natural reluctance to have its property annexed by a foreign Power. If these things were laid to Germany's charge by hostile writers of alien nationality, fair-minded people

would simply have to repudiate them as gross slanders under existing circumstances. But the curious point is that they do not take the form of accusations. They are recited as fine and proper performances; acts entirely consistent with the duty of Occidental States in their dealings with the Orient, and they are justified by arguments so pretty, so ingenuous, that we beg our readers to consider them briefly. Thus, one of the international moralists says:—"It is evident that Germany struck first and explained after, just as the Japanese did with the *Kowshing*, and no doubt Germany will be equally successful in finding eminent professors of International Law to prove that the novel is not necessarily the illegal." Was ever such a wild analogy set up before by a sane writer? The relations between Japan and China had long been strained to the verge of rupture; the question directly in dispute was China's arbitrary interference in Korean affairs; Japan duly warned China that if the latter sent any further re-inforcements to her troops in Korea, the act would be regarded as an open declaration of hostilities; China sent re-inforcements, and Japan, intercepting the ship that carried them, sunk it. There never was the slightest question about Japan's right to prevent the reinforcement of an army evidently destined for use against herself, above all after she had given notice of an intention to prevent it. The only question was whether, in deference to the British flag which the hired transport flew, her sinking was justifiable. And that is the incident quoted as a parallel for the seizure of a friendly Power's territory in time of peace without warning of any kind! It is not surprising to find that the same moralist is quite content to conclude that "the German Authorities have long been premeditating a blow, and that the murder of the missionaries formed a convenient pretext." "The German Authorities have long been premeditating a blow." A blow for what? What has China done to deserve a "blow"? Nothing whatever. Her sole fault is that she happens to own territory which other Powers would be pleased to possess. A pretty character to assign to one of the most civilized Powers of Europe, and a pretty insight this interpreter of German's conduct gives us of his own moral standards. Still, we doubt whether ever that *exposé* of the motives supposed to guide European nations is quite so striking as the following, which we quote from another local contemporary:—

By making war on the neighbouring empire on the preposterous pretence of "securing the peace of the East," which was so much dinned into our ears at the time the Japanese hostilities were in progress, it is probable that no more effectual means could have been taken to breed a future crop of trouble than the all too successful effort of Japan to conquer China, the result being to convince the world that the latter, by its weakness, offers itself an easy prey to the spoiler. * * * * But after what we have witnessed with respect

to Japan's expulsion from the Liaotung Peninsula by a confederacy of three only of the European Powers, any participation of Japan in the general scramble is not likely to be permitted by these and other nations which will be then interested.

Now had Japan curbed its ambition and its cupidity by refraining from making war on China, the feebleness of the latter to defend itself against outward attacks would not have been so completely exposed as to invite aggression.

The writer of the above is a most unhappy victim of the anti-Japanese mania, and much allowance must be made for him on the score of his malady. Incapable of resisting the temptation to abuse Japan, he yields to it even though it betrays him into a wholesale slander of European Powers. He naïvely writes down all Western States as bandits whose plundering propensities are restrained solely by the dread of inconvenient resistance on the part of their victim. Let them be once assured of a victim's inability to struggle, and they will proceed to despoil him without delay or compunction. Japan, in fair warfare, demonstrated China's weakness. If other Powers profit by the demonstration and tear China to pieces, not they but Japan is to blame. A most ingenuous proposition! The spectators at a fight, perceiving that one of the combatants does not possess the thews hitherto accredited to him, go in, after the combat, steal his goods and cut his throat. Not theirs the fault, however. The sole sinner is the wretched sufferer's original antagonist. If he had not proved the other fellow's weakness, no one would have been irresistibly tempted to resort to knifing and robbing.

ENGLAND IN THE EAST.

AS a rule the Tokyo newspapers, in commenting on the present crisis in China's affairs, place Great Britain entirely outside the complication. Some speak of collusion between Germany and Russia; some of an understanding between France, Germany and Russia, but with the exception of the *Fiji Shimpō* we have not found that any vernacular journal suggests complicity on the part of England. The exception is important, however, for the *Fiji Shimpō* is the most influential newspaper in Japan, and what it says many persons will believe. The suggestion to which we allude is not, indeed, advanced editorially by the *Fiji*: it is put forward, as the view "said to be taken by Japanese and foreign observers." But that does not detract from its weight; rather adds to it, on the contrary. Great Britain, according to this estimate, has entered into an agreement with Russia and Germany, the gist of the compact being that Germany is to take Shantung, Russia to have Liaotung, and England to appropriate whatever portions of southern China she pleases, no one of the three interfering with the designs of the other two, but rather promoting them if necessary. Perhaps we ought not to be sur-

prised however profound may be Japan's ignorance of England and her ways, seeing that even Englishmen themselves sometimes display a correspondingly stupendous want of knowledge of their own country's history and their own nation's disposition. Still we confess that we should not have looked for such a statement in the columns of the *Fiji Shimpō*, and we beg the editor of that journal to give us his attention for a moment while we explain that with difficulty could there be found any proposition more preposterous than that assigned by him to "Japanese and foreign observers." There is something positively laughable in the notion that any English statesman could be induced to enter into a compact of the kind described by our Tokyo contemporary. If Lord SALISBURY became a party to such an agreement, his reception at the hands of the British Parliament and the British public, when the fact became known, would be about the kind of reception that the Archbishop of CANTERBURY might expect if he announced that he had entered into an agreement with the POPE for the stamping out of Home Rule doctrines by establishing an Inquisition in Ireland. The *Fiji Shimpō* may reply, of course, that our assertion on such a subject is not worth more than the opinion of any one else. We admit the justice of the rejoinder, and proceed to support our position by historical facts, which are doubtless within the knowledge of our Tokyo contemporary though they seem to have escaped its memory for the moment. The Emperor NICHOLAS I. of Russia enjoyed at one time extraordinary popularity in England. He visited that country in 1844, and his splendid presence, his wonderfully winning manners, and his obviously sincere expressions of desire for a friendly alliance, produced a most favorable impression. There is little doubt that he himself had a genuine admiration for England, and it is on record that when he wished to convey his impression of the highest degree of personal loyalty and honour, he always spoke of the word of an English gentleman. NICHOLAS was a great statesman. One of his sagacious insights had reference to what he called "the sick man of Europe." He was persuaded that the Turkish empire must fall to pieces, sooner or later, and he believed that the only way to prevent a disastrous conflict among European Powers in connexion with that event was to establish a previous understanding between Russia and England as to the disposal of the sick man's possessions. The notion does not appear very immoral. Were it submitted to a dozen unbiassed persons, probably six of them would pronounce it practical and not unworthy of a civilized State's consideration. NICHOLAS certainly regarded it in that light, and imagined that in making the proposition frankly to England, he was acting an honorable, no less

than a far-seeing, part. He conveyed the idea verbally to the British Ambassador in St. Petersburg, Sir E. HAMILTON SEYMOUR; the Ambassador conveyed it to Lord JOHN RUSSELL, Her Majesty's Foreign Secretary, and from that hour the British estimate of NICHOLAS underwent a complete change. His proposal was curtly but emphatically rejected, and "the English Government and most of the English people"—we quote from "The History of Our Own Times"—"ever after looked on NICHOLAS as a determined plotter and plunderer, who was not to be made an associate in any engagement." That incident is so apposite that it might be suffered to stand alone. A still more recent case may be added, however, from the annals of the year 1859, when the Emperor of the FRENCH, after conquering Austria at the instance of Count CAVOUR, obliged Sardinia to compensate his services by the surrender of Nice and Savoy. Probably there are among our readers some who can recall the irrepressible storm of indignation that swept over England on receipt of the news. Here was another of those base compacts of partition which respectable people imagined to have been banished from European politics. Of LOUIS NAPOLEON it may be said, as it has already been said of NICHOLAS, that by that transaction he irrevocably forfeited every claim to English confidence. In truth, it would scarcely be possible to imagine anything more repugnant to the genius of the English nation and to the canons of British statesmanship, than collusion with a foreign Power for the partition of another State's territories. We have said, however, that monstrous as is such a misconception of the English character, even Englishmen fall into it occasionally, and we have an instance before us in the editor of the *Japan Gazette*, who, referring to this very talk of an agreement between Germany, England, France and Russia for the partition of China, finds the idea quite conceivable, in view of the fact that the European Powers, including England, came to an understanding about their spheres of influence in Africa. It is wearisome to have to deal with a proposition so strangely lacking in discrimination. Africa's case is in no sense parallel with China's. In Africa the various Powers already possessed colonies which were gradually expanding, and their mutual expansions threatened to result in collisions. To guard against that danger, the process of delimiting the various spheres of influence was undertaken. A precaution of that kind is no more comparable with a secret agreement between England, France, Germany and Russia to steal the Chinese empire and divide it among themselves, than the allotment of seats to passengers in a railway carriage is comparable with a plot among burglars to break into a strong room and share the contents in fixed proportions. If there is anything certain in

the world, the fact that England has not put her hand to any compact relating to the partition of the Chinese empire, may be accepted as certain.

THE SHANGHAI REPORTERS.

IT is not surprising that folks are beginning to regard the recent action of the Shanghai newspaper reporters in its true light. The reporters were treated with discourtesy, as they supposed, in not being allowed to take their tiffin at a place reserved by the Race Stewards for special persons. By way of resenting the alleged rudeness, they decided to abstain from preparing any report of the races during the remainder of the meeting. Now without pausing to consider here whether the reporters were or were not discourteously treated, let us just see how the method of demonstration resorted to by them would work under different circumstances. Suppose that a special correspondent despatched by *The Times* to report operations of war in some foreign country, should find that a slight had been put upon him at the mess of the head-quarter staff of the army to which he was attached, and should thereupon protest against the indignity by withdrawing from the field and sending no more news to *The Times*, would he not be regarded as totally disqualified to discharge the duties of a correspondent? Would not his employers and the public at large say that the assertion of his personal dignity might be very desirable from his own point of view, but that to assert it at the expense of *The Times* and its readers was much as though a father should deprive his family of food because butchers and bakers did not behave towards him with sufficient deference? The behaviour of the Shanghai reporters betrayed a singularly perverted conception of the first duty of journalism. The first duty of journalism, we take it, is to supply news to the public; to publish accounts of all important events that happen to occur. Fancy a subscriber to the *N.-C. Daily News* taking up the paper, looking for a report of the Shanghai Races, and finding that no report was published, because, forsooth, the reporter had not obtained access to a certain luncheon-room. Naturally the subscriber would say:—"Why am I to be punished because the arrangements for the reporter's tiffin were not satisfactory? I have nothing to do with his tiffin. I want to hear about the races." The theory evidently underlying the action of the Shanghai reporters was that they paid a compliment to the Stewards and the Committee of the Races by publishing full accounts of the events, and that the general body of the public need not be considered at all. Precisely the same topsy-turvy idea seems to prevail to a certain extent in Yokohama. There are people here who evidently imagine that the chief feature

of an advertisement is the monetary gain it brings and the interest it imparts to the newspaper in which it is inserted. Hence, if the politics or the tone of a newspaper offends them, they withhold their advertisements from its columns, quite irrespective of the facilities for publicity that it may afford. That is a complete perversion of the object of advertising. The object of advertising is to attract attention to some commodity or some project for which the advertiser seeks purchasers or patrons. In short, the advertisement is intended primarily to promote the interests of the advertiser; he has nothing to do with the interests of the newspaper. He chooses the latter, or ought to choose it, solely with regard to its advantages as a medium of access to the eye of the public, and in inserting or withholding an advertisement from a particular journal, his sole consideration should be the quality of the journal for advertising purposes. The editor of a newspaper seldom knows anything about the advertisements that appear in his columns. It would never occur to him to compare his journal's advertisements one by one with those of another journal, and the notion of writing so as to propitiate this advertiser or that strikes him as ludicrous. There are exceptions, of course. We have had in Yokohama an editor publicly lamenting that such and such an advertisement was not inserted in his paper, and even announcing that his system is to make things hot for any advertiser discriminating against him. But that kind of thing is as foreign to genuine journalism as London smuts are to sunshine. An ordinary editor devotes himself simply to making his paper as "newsy" and readable as may be, and if he can not raise his circulation to such a point as to attract advertisers, he attributes the failure to his own incapacity, not at all to any romantic and unbusiness-like discrimination on the part of advertisers. Probing the matter a little more deeply, we are disposed to think that the Far-Eastern communities are themselves to some extent responsible for the eccentricities of journalistic morality sometimes witnessed at this end of the world. There is not the slightest doubt that many leading companies, merchants and agencies advertise in all the local papers solely for the sake of impartiality. They know well that the expense incurred can not be justified by results, and that equal publicity might be secured though only one or two papers were employed. But they travel outside sound and simple business considerations lest they should seem to show favour or affection. Whether that singular state of affairs is a consequence of the perverted canons of Far-Eastern journalists themselves, or whether it has contributed to pervert them, we do not know, but the conduct of the Shanghai reporters certainly reached the climax of "un-newspaperly" journalism.

THE NIPPON YUSEN KAISHA.

IT had been well understood for some time that the Directors of the Nippon Yusen Kaisha would not find themselves in a position to propose any dividend for the half year ending Sept. 30th, unless they decided not to place any sums to the reserves for insurance, depreciation and repairs. The Company's business in home waters is prosperous, but it is losing heavily on its foreign lines, that is to say, its lines to Europe, America and Australia. Its total losses on account of these services during the half year under review were 400,000 yen, in round numbers, but as the corresponding losses during the preceding half year—ended March 31st, 1897—aggregated 632,000 yen, a marked improvement has evidently taken place. It may seem strange that whereas much larger losses were incurred in the half year ended March 31st than in the half year ended Sept. 30th, a dividend at the rate of 10 per cent. was paid for the former, and no dividend has been declared for the latter. The explanation is that, in making up the accounts for the half year October-March a sum of 427,000 yen was taken from the Reserve for the Equalization of Dividends, a sum of 190,000 yen was brought over from the previous account, and a further sum of 168,000 yen became available from the Deterioration Fund. No such arrangements were possible in connexion with the last accounts. A dividend might have been declared, indeed, had the directors refrained from making due additions to the various Reserves, but they preferred the latter course, and their choice was doubtless wise. The estimated value of the Company's fleet at present is 12,084,425 yen, and as 4 per cent. of that figure was added to the Reserves for Insurance, Repairs, &c., a sum of 483,377 yen was thus absorbed. The Insurance Reserve now totals 2,296,832 yen, and the Repair Fund, 454,313 yen. The Company's difficulty is that, whereas it has opened the foreign service mentioned above, it has not yet succeeded in obtaining the bounties contemplated by law. In order to qualify for the receipt of bounties ships have to satisfy certain tests, and it would appear that during the half year under review the Company succeeded in securing a bounty on two steamers only, the sum that stands in the accounts being 111,691 yen. Several other steamers, however, are understood to be now qualified, so that a very substantial addition will doubtless be made to the revenue during the current half year. It is somewhat of a hardship that these foreign services should have been undertaken at the instance of the Government, and that the resulting losses should fall on the shareholders. But the trouble is temporary. Last session, the Government asked the Diet to grant a special annual subsidy of 2,918,974 yen,

for 10 years, on account of the company's European and American lines. The Bill did not come up for discussion, and there exists an idea that the Diet's failure to make the grant is responsible for the present ebb in the tide of this Company's prosperity. But according to the terms of the Bill, no disbursements could have been made under it before April 1st, 1898, and its passage would consequently have afforded no relief during the present year. The plain fact is that the European and American services were inaugurated with full expectation of a heavy loss during the first year. That prospect was distinctly unfolded to the shareholders, and they agreed to face it. After the war with China, the Company found that its earnings in connexion with the transport of troops justified it in devoting a sum of three million yen towards the acquisition of steamers for the proposed lines. It ordered twelve vessels in England, but without waiting for their completion, organized the services to Europe and America with vessels not possessing the qualifications prescribed by the Laws for the Encouragement of Navigation and Ship-building. In short, the enterprise was commenced before the conditions requisite for obtaining State aid had been fulfilled. We do not mean to suggest that such a course was unwise: we merely state what appear to be the facts. The laws are sufficiently liberal. A steamer of 6,000 tons displacement, capable of developing a speed of 14 knots, is entitled to a bounty of 70 sen per ton for every thousand miles run in the year. Hence, if she covers fifty thousand miles, she receives "encouragement" to the extent of 210,000 yen. Were the Company in receipt of that bounty on account of seven steamers, instead of two, as is the case at present, there would be no difficulty in paying a dividend of ten per cent. annually on the capital (12,000,000 yen), and carrying substantial sums to the Reserves. There is, indeed, no complaint against the laws on the score of parsimony. Rather is there an apprehension that the liberality of their provisions may inspire the Diet to effect some alteration which will err equally on the other side. That fear is one of the chief reasons that impelled the Directors of the Company last year to ask the Government for a fixed subsidy during a fixed term of years. They naturally contended that to start a great enterprise on the strength of promises seemingly so unstable as those contained in the Law for the Encouragement of Navigation and Ship-building, would be rash. Another difficulty is that the bounty payable to a ship decreases rapidly with the latter's age, and the Directors deemed it necessary to be insured against a loss of revenue on that account for ten years at any rate. There is, of course, no hope at present that the Diet will pass the Special Subsidy Bill next session. On the other

hand, there is no fear that any change will be effected in the existing laws. Hence, the Company should be able to increase its "encouragement bounty" from 111,000 *yen*, which appears to have been the amount received during the past twelve-month, to a million and a half or two millions.

The most interesting question in connexion with the Company's account is to determine what would be the result of its operations were it not in receipt of any State aid whatever. It received during the six months under review 720,045 *yen* as payment for carrying the mails and as special service bounty, and it drew 111,691 *yen* under the Encouragement laws, its total aids thus being 831,736 *yen*. Omitting these items, we find that its disbursements aggregated 4,954,336 *yen*, and its earnings, 4,964,124 *yen*. There is thus a small surplus on the side of income. If, then, the loss of 400,000 *yen* had not been incurred in connexion with the European and American lines, there would have been a balance of 1,241,024 *yen* available for the payment of a dividend, and for appropriations to the Reserves. A ten-per-cent. dividend absorbs 605,000 *yen*, and if to this we add 4 per cent. of the value of the fleet for insurance and repairs there still remains a surplus of 121,623 *yen*. Evidently were the company not burdened with its foreign lines its affairs would be very flourishing.

It will readily be supposed that the chief trouble to the shareholders in connexion with the present state of affairs is not loss of dividend but depreciation of the shares. These—50 *yen* paid up—stood at 74 *yen* on December 1st 1896, and are now quoted at 55 *yen*. Hence the total market value of the shares has fallen, in the space of a year, from 17,760,000 *yen* to 13,200,000 *yen*: a difference of 4,560,000 *yen*.

ANOTHER DEMAND.

In an "extra" published by the *Fiji Shimpō*, it is stated that Germany has preferred another demand to the Peking Government, namely, the privilege of building railways and working mines in Shantung province. The news appears to us very apocryphal. Altogether there seems to be considerable uncertainty about the claims put forward. For example, it was originally asserted that Germany had asked for a guarantee against the recurrence of such outrages, but the report has not been confirmed and is now, apparently, discredited. Such a demand would not, in itself, have been unnatural, and would also have been very convenient if there was really any idea of converting the incident into an opportunity for territorial aggrandisement. Then, again, there is much difficulty in believing that such a sum as six hundred thousand taels was named by way of indemnity for the deaths of two missionaries, so that, on the whole, there is nothing for it but to wait until full information reaches us.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In No. 51 of Dr. Katō's essays, published in the *Taiyō*, the subject of religious liberty is dealt with. The clause in the Constitution which grants this is founded on similar provisions in the Constitutions of Western countries, but Dr. Katō has his doubts as to whether the law will work as smoothly here as it does in countries where practically the religion professed is Christianity or Judaism. It is not at all improbable, says Dr. Katō, that the jealousies, bigotry and zeal of the sects represented in this country may render the law very difficult of application. It took Buddhism a long time to become a national religion. At first it caused no end of dissension throughout the country. But it eventually showed itself capable of adapting itself to its new surroundings. Will Christianity prove to be equally plastic? I think not, says Dr. Katō. It insists on belief in one God only. It condemns the worship of idols, which condemnation is extended, by some Christians, to obedience before the Emperor's picture. It refuses to respect or to recognise the rites and observances of non-Christian sects. In some Christian schools not even national holidays are observed.* In all this we discern material for future discord, and therefore think that there was great need for inserting in the conscience clause words that define the limit beyond which liberty will not be allowed. The public peace and our duties as subjects are not to be sacrificed on the altar of religious liberty.

Nos. 55 and 56 of Dr. Katō's essays also discuss religion and morality. The title of the first of these is *Karada no dorei to Kokoro no dorei* (Slaves in body and Slaves in Mind). Among the latter Dr. Katō reckons those Buddhists and Christians who have not the courage to free themselves from the trammels of tradition. As regards ethical teaching, Dr. Katō comes to the conclusion that it has effected little. It differs according to the creeds which give it authority. Great attention has been given in China and Japan to instruction in the feelings that relations should bear to each other, but a calm survey of humanity as it actually exists in the two countries shows that mothers-in-law are seldom liked, and that an enormous deal of friction exists between other members of the family, which no amount of lecturing will suffice to remove. The gist of Dr. Katō's essay is that the practical results of instruction in morals are out of all proportion to the labour spent in teaching.

The Niigata Normal School affair, reported in our last Summary, through the mediation of the Prefect, has been brought to a satisfactory termination. The Director has reversed the decision in which a student was disqualified from pursuing a higher course of study on account of his Christianity. Commenting on the case, the *Taiyō* says that it is a mistake to think that the conscience clause in the Constitution grants unlimited liberty to the subject in the choice of a religion. In the notion that the teaching of Christianity is antagonistic to state interests, we quite agree with the Director, says the *Taiyō*. The only mistake made consisted in confusing the *in posse* with the *in esse*. His action was premature, but not altogether illogical. That the student's belief will prove injurious is certain, but while unable to point to the actual injury committed, the Director should have kept silent.

The *Taiyō* has taken up the cudgels on behalf of Dr. Hozumi, whose ancestral worship theory was very severely handled by the *Rikugō Zasshi* a short time ago, as shown in our last Summary. The *Taiyō*, under the editorship of Mr. Takayama Rinjiō, figures as a champion of ultra-nationalism. According to this organ, the Japanese possess a moral superiority to other nations, which they will do well to guard against all foreign (especially Christian) undermining influences. While Dr. Hozumi's doctrine, as it stands, says the *Taiyō*,

* We know of no such schools.—Writer of Summary.

may not afford a suitable basis whereon to found a religious creed, if, instead of making ancestral identity the foundation, we rely on nationalism, we shall obtain something solid on which to build. In an article on "Formosa," the *Taiyō* argues in favour of "Nipponising" the Formosans, and says that in the refusal to bow to the standards of other nations and in insisting on their adoption of Japanese institutions and modes of thought, lie the secret of Japan's colonial success. In proof of this theory the *Taiyō* quotes largely from the history of the fall of the Roman empire. The doctrine of the equality of all men, as taught by Christianity, is a target at which the *Taiyō* shoots vigorously. Starting with the theory of Japan's moral superiority to its neighbours, it concludes by affirming that in Formosa her only function is to instruct, enlighten and lead—to stamp her own nationalism on the subject race.

The birthday of Confucius was celebrated in Tōkyō by the holding of a public meeting at which various ethical subjects were discussed. Dr. Nakajima replied in the affirmative to the question, "Can Ethics become a Science in the strict sense of that term?" Professor Toyama took up the subject of authority, that of government and that of learning, especially dwelling upon its abuses. The meeting lasted from 1 to 8 p.m. and was considered the most successful ever held. But a full report of the speeches has not yet been published. The annual recurrence of these celebrations forms an interesting landmark in the progress of thought on the great ethical subjects whose importance to the world was so strikingly shown by the life and teaching of the great Chinese sage. We hope to be in a position to furnish fuller information on the subject in our next summary.

In a recent number of the *Shūkyō* the editor discusses two current notions respecting religion; one being that it is a mere device for controlling unenlightened people, the other that it is one of the many forms of superstition. To the first view it is objected, (1) that were such a theory to be accepted, the necessity of a number of religions, with doctrines directly opposed to each other, could not be denied, and hence the attainment of religious truth would be impossible. (2) This theory implies that when, as the world progresses, religion is no longer needed as a political organ for the control of the uneducated, we can afford to dispense with it altogether, which cannot be admitted. Those who regard religion as a mere superstition are guilty of three errors. (a) They confound the true elements of religion with the superstitious elements that are mixed with it. (b) They are mistaken as to the nature of what is called science, giving definitions of it that exclude religion. (c) Their psychology is faulty. They fail to recognise that the soul has an existence all its own. Religion, as defined by the editor of the *Shūkyō*, consists of the morally harmonious blending of the soul of man and the soul of the universe *Ningen no reikon to uchū no reikon to no dōtoku teki chokwa* (調和) nari.

In another editorial in the same number the degraded position assigned to woman by Buddhism, Confucianism and Shintō is alluded to and the necessity of raising her by means of Christianity to a higher level socially, intellectually and morally is urged. The evils resulting from the Japanese practice of retiring into private life at about the age of 40 are pointed out and contrasted with the vigour of our western octogenarians.

The Unitarian college, the Senshūgakkin, has just commenced a new year, with Dr. Nakajima Rikizō, Dr. Kanai Yen and other well-known professors as lecturers, in addition to the principal members of the old staff.

The *Fukuin Shimpō* is alarmed at the inroads of secular influences manifested in Mission schools and Mission churches. It condemns the movement, now so popular, in favour of placing Mission schools under the control of the Department of Education in order to enable them to rank as Middle Schools. It regrets the

tendency shown among evangelists to pander to vulgar taste by preaching nationalism and loyalty to the throne in the place of the gospel of Christ. Even theological seminaries, according to the *Fukui Shimpō*, are not exempt from the worldliness of the age, nationalism being rife among the students to an extent never before known. While all this is going on, men who have been evangelists for years are taking to secular callings. The worship of money, rank and fame and the love of personal ease are conspicuous on every hand within the pale of the Christian Church.

In another article on "Loyalty and Patriotism and the Corruption of the Political World," the *Fukui Shimpō* shows that in proportion to the loud protestations of nationalists concerning their loyalty to the throne and the like they have shown moral unscrupulousness never before witnessed. Japan's success in the late war was wholly owing to the lessons she had learnt from Western teachers, and the after-attempt to represent matters as though it was her patriotism that ensured victory for her is absurd.

The Nihon-Kirisuto-Kyōkai lately held a celebration of the 25th anniversary of its establishment. On that occasion the Rev. K. Ibuka gave an account of the history of the mission; from which we extract the following:—Twenty-five years ago, the well-known government notice "strictly forbidding the wicked Christian Sect" was to be seen everywhere. At that time there were only 11 Christian converts attached to our church. They were young and their faith was of the simplest kind, which was summed up in a few articles. The name they assumed was the Nihon-Kirisuto-Kyōkai. In 1877, a union of the North American Presbyterian and the Scotch Presbyterian converts with those belonging to the American Reformed Church took place, the united bodies taking the name of the Nihon-Itchi-Kyōkai. From 1887 onwards, for several years attempts were made to effect a union with the Kumiai churches. In 1890, our articles of faith and our constitution went through a thorough revision, the confession of faith being recast so as to represent actual belief at that time. During the 25 years under review, the whole of the Old and New Testaments have been translated. Mission schools have been established in various parts and numerous Christian periodicals and books have been published. To the above remarks Dr. Thomson added that, from the early days of the Presbyterian Church in Japan, it had been the aim of Mr. John Ballagh, Dr. Brown and himself not to burden the native churches with articles of faith that were not essential, nor to require them to observe all the rules to which Western Christians were expected to conform. These missionaries looked forward to the time when the native church should legislate for itself and draw up its own confession of faith, and this expectation had been realised. Mr. Ishihara further stated that the Nihon-Kirisuto Kyōkai now has over 150 preaching places, a membership of 12,000, pastors and evangelists numbering about 200, and a Missionary Society that owes its existence to native zeal and support.

In connection with the above it may be well to mention that Messrs. Ibuka and Kawada have just published a history of the Nihon-Kirisuto Kyōkai, which is for sale at the Meiji Gaku-in at 15 *sen* per copy. This little volume furnishes a full account of the progress of the mission from its earliest days and records facts which are only known to very old residents. It is said that the Methodists and other bodies purpose issuing similar works, so that before long materials will be at hand for an exhaustive history of Protestant Missions in Japan.

The *Shūkyō* (No. 73) has articles on "The Reorganisation of the Christian Church," "The Relation of Ideas to Action"; "Buddhist Psychology," "Ten Discoveries of Prehistoric Men," and "Social Life and Morality in India," in addition to two editorials, one on "The end of Social Existence," the other on "Ideal Mar-

riage." The article on the "Reorganisation of the Christian Church" is an attack on the whole system of propagating Christianity now in vogue—the payment of certain agents to teach certain doctrines. The writer maintains that this system is responsible for much of the hypocrisy and lukewarmness that exists in the Christian church. He says that in the case of every ninety-nine persons out of a hundred it is difficult for non-Christian Japanese to dispossess themselves of the idea that the preaching of the missionaries is a trade, to be ranked on a level with the selling of articles of merchandise. By the ordinary man they are regarded as pushing certain wares in consideration of the receipt of a fixed salary. The history of Christianity and Buddhism resemble each other as regards methods of early and later propagation. In the early ages, the principal part of the work of propagandism was done by unpaid agents whose hearts were full of zeal for the cause. With a regular paid priesthood or ministry come formality, hypocrisy and other evils. That the number of Christian ministers to whom the office is no more than a means of obtaining a living is very large in the West is an undeniable fact. It was stated not long ago that in America several hundred ministers of Christ had been convicted of heinous crimes. The same may be asserted of Buddhist priests. In saying this, continues the writer we are quoting, I do not wish to be understood as condemning missionaries as a class, but only as denouncing the system which maintains them as paid agents to preach certain fixed doctrines. To me the method of evangelisation adopted seems to be quite wrong. Instead of forcing the gospel on people who have no desire to hear it in the way that some evangelists do, I would have teachers wait in their houses for the arrival of inquirers. Those who are really anxious to be instructed will not fail to call on the missionary. By the number of converts made in this way a man's real capacity for missionary work could soon be tested. If he failed to attract inquirers, he should infer that he is not suited to the calling he has adopted, and should resign, and not receive the church's money for work that he is not performing. The effects of the present system on freedom of thought and inquiry are very manifest. The endowment, as it were, of certain doctrines is a serious obstacle to investigation and progress. Among the missionaries there are no doubt men who in their innermost souls do not believe that the Bible is without errors, do not believe in the doctrine of the Trinity, the atonement, and miracles, but as long as the present system is maintained, such men are not at liberty to express their real convictions while remaining agents of the Societies that provide them with money. Hence the temptation to compromise is very strong. Religious agency that is paid for undoubtedly ranks lower than an agency that is free and whose power depends alone on mental conviction. Along with the progress of science, theology is undergoing a thorough renovation. Criticism, historical, philological and scientific is undermining the foundations of the old orthodox citadel. The grosser elements of Christianity are being removed year by year. Men's ideas in reference to the whole system of Christianity have been transformed, and it is my earnest hope that the new belief will beget a new church organisation and that we may soon see the abolition of a practice that is responsible for so many evils. Why should not Japan take the lead in this matter? In return for all the benefits she has received from the West, is it not in her power to show to the world a form of Christianity that shall be free from the alloy with which it has been mixed for so many centuries?

In the article on "Ideal Marriage" it is maintained that the happiness of married life depends on identity of feeling, taste, and intellectual interest and on compatibility of temper.

It seems that Mr. Takahashi Itchi—whose contribution to the *Japan Times* on Christian hypocrisy in America led to a discussion with the Rev. E. Snodgrass—after graduating at

the Imperial University, entered the Michigan University and took a degree there. He afterwards settled in Canada as a bookseller. He spent thirteen years in foreign countries and is said to possess a knowledge of English that is quite exceptional. Having challenged Mr. Snodgrass to discuss the subject of American Christianity in public, it is now stated that the two gentlemen are to confront each other in the Kanda Seinen-Kan, or some other large building, during the month of December.

An often felt want has now been supplied by the publication of a Dictionary of Christian terms, called the *Kirisutokyo-Ji-i*, which is for sale, at 1 *yen* 50 *sen* per copy. The foreign compiler is the Rev. C. B. Mouely, of the Kōbe Kwansai-Gakuin, who has been assisted by Messrs. Yoshioka and Miyake.

Among other articles the *Shinri* has one entitled "How should the Gospel be preached in a non-Christian Civilised Country," by Dr. Lipsius. The answer to this question briefly stated is as follows:—(1) The gospel should be represented as a special revelation from God, and not as an embodiment of human wisdom. (2) It should be shown that the revelation is perfect. (3) Christianity should not be represented as a new civilisation, but as a salvation from moral evils that had sprung up in the world prior to its existence. (4) It should not be represented as the product of a religious sect, but as designed to manifest the character of Christ. (5) The gospel should not be made to appear as an astounding doctrine; but rather as a way of saving mankind chosen by God. (6) The gospel should be represented as a power in the hearts of believers rather than as mere history.

In the number of the *Shinri* from which we have just quoted is an article from the pen of the Rev. R. Minami on "Responsibility Connected with Christian Theology in Japan." Mr. Minami is of opinion that great use should be made of the religious ideas which the Japanese have derived from Shintō in teaching Christianity. To Mr. Minami the difference between Shintō believers and Christians concerns the stage of development of religious ideas and nothing more. The Christian idea of monotheism was preceded by polytheism. It is not necessary to regard the polytheistic stage of religion as absolutely antagonistic to monotheism, but as preparatory thereto. The Christian teacher finds in Japan a profound respect for the gods and also ideas respecting sin, which he will do well to utilise. In reference to the latter the Shintō term *harai* and the prayers of emperors even, asking for purification or cleansing, are a sufficient proof that the pious Japanese has always been conscious of sin. The warm Christian sun shining on these germs will soon quicken them into a life and vigour hitherto unknown. The reason of Christianity's accomplishing more as a religion than Shintō is to be attributed to the fact that in the former religion has reached a higher stage of development. But in seeking to propagate Christian doctrines here they should not be represented as altogether new and foreign to the Japanese mind, but as embodying truths with which it is already more or less familiar.

The *Taiyō* a short time ago accused Christians of compromising themselves by the support given to the national movement. The editor of the *Taiyō*, while being an ardent nationalist is anti-Christian and hence does not regard with complacency the support given to "Nipponism" by professing Christians. The *Rikugō Zasshi*, in an article entitled, "What is Opportunism?" shows that the movement in the Christian Church in favour of the independence of Japanese churches preceded by several years what is now called the "Nippon Shugi" movement, and that therefore it is quite incorrect to speak of the attitude of certain leading Christians in reference to the establishment of a church independent of foreign control as "opportunism." The Editor of the *Taiyō* needs "eyes to see himself as others see him," says the *Rikugō*. To

others the course of trimming that he has adopted in order to gain the ear of the public, the way in which he has tried to bolster up a cause which never can succeed is "Opportunism" of the most pronounced type. If Christians wish for a lesson in "Opportunism" the editor of the *Taiyō* is well qualified to give it.

* *

No. 362 of the *Kokumin-no-Tomo* publishes a long article by Mr. Ukita Kazutani entitled "Religion and Government," of which the following is the gist:—In all countries and in all times religion and government are closely allied to each other. The former deals with the relation of man to God, the latter with the relation between man and man. In endeavouring to insure the fulfilment of man's duties to God government has to be relied on. The idea that the authority of rulers is received from God prevailed in Europe for many centuries and prevails in some Eastern countries even now. Just as all religion must be monotheistic, polytheistic or pantheistic, so all government must assume one of three forms; either a country must be governed by a monarch, or by a body of men of acknowledged superiority, or the governing power must rest with the masses. We must have monarchy, aristocracy or democracy. Just as religion has its idols, material and mental, so has government its objects of worship which change but little from age to age. The great sects of Christendom, like great political parties, each emphasise some special truth and in a large measure complement each other. No form of government, no sect, no political party can claim a monopoly of truth. There is a great mixture of elements to be found in both politics and religion, and names by no means represent in every case what are the guiding principles and motives of the chief actors. Despotism in name, there are some elements in the Russian government that are quite democratic. Democratic in name, there are characteristics of the American government that are ultra-despotic. And so with religions. There are Protestant elements in Roman Catholicism and Roman Catholic tendencies in Protestantism. The conclusion we reach, says Mr. Ukita, is that there is no special merit in forms of government or religion, that all depends on administration. He concludes his essay by quoting the well-known lines of Pope:—

For forms of government let fools contest;
What'er is best administer'd is best;
For modes of faith, let graceless zealots fight;
His can't be wrong whose life is in the right.
In faith and hope, the world will disagree;
But all mankind's concern is charity.

At a large Christian lecture meeting held in the Seinen Kan, Kanda, Tōkyō, on the 12th ult., by the Fukuin Dōmeikai, which was attended by over 1,000 people, Mr. Miyoshi Taizō, formerly President of the Supreme Court, gave an account of the manner in which he was converted to Christianity. In 1882 he accompanied Count Ito to Europe and while there came into contact with several Christian scholars whose conversation convinced him that it was his duty to study Christianity, which he did on his return to Japan under Mr. Kosaki, with the result that he joined the church. His feelings as a believer were, he said, quite different from what they had been before. In former days he had sat in judgment on men's crimes, and now he was engaged in a somewhat similar work. He was distinguishing between the right and the wrong in the lives of men. But while practising as a barrister, he no longer felt indifferent to the crimes of his fellow-men. It troubled him to see men going astray. His heart was full of compassion. Some years ago M. Boissonade was present in Court when torture was being administered to a criminal and was so moved that, after shedding tears in the presence of the judge, he hastened to the Minister of Justice and informed him that no country claiming to be civilised retained the practice of torture, with the result that not long after the cruel custom was abolished. Though matters have improved much, even to-day any one who is minutely acquainted with the way in which human beings are treated on certain

occasions knows that things are going on which no merciful man could witness without pain. One of the chief benefits derived from a belief in Christianity is the knowledge of the real value of human beings.

At the same meeting Mr. Kosaki gave an address on earnestness and sincerity of heart, which he said were the foundation of all true religion; Mr. Hiraiwa Kempo spoke on "the Blessedness of compassion;" and Mr. Tatekawa Umpei, the well-known member of the Diet, under the title of "My Confession," informed the meeting that he regarded his espousal of the cause of popular rights and liberty as a mistake. The liberty which he had so earnestly proclaimed had been interpreted as liberty to do evil. The doctrine of the liberty of the subject had developed into the most unqualified egoism, involving all manner of corruption. Every man was a law unto himself, and moral obligations were utterly ignored by a large class of modern politicians. It was plain that the principle of liberty had been pushed too far and the speaker was determined to do his best to remedy this evil.

Mr. Matsumura Kaiseki also dwelt on the wide-spread corruption of the age and of the need that there is for earnest Christian effort.

There is a great absence of activity in the Buddhist world. The excitement over the Otani dispute and the Kōya-san disruption has subsided. Even the subject of mixed residence is attracting little attention. Amid the general stagnancy one subject only is causing a slight stir. This is the proposal among certain Buddhists to abolish the canons which forbid priests to marry and to eat meat. It is justly observed that these rules are contrary to nature and hence are constantly transgressed. Buddhist priests are placed in a very disadvantageous position *vis-à-vis* the teachers of other sects by being obliged to profess a celibacy which they cannot practice. The *Bukkyō* approves of the measure and states that all sensible Buddhists are in favour of it. Those influential Buddhists who refrain from expressing an opinion for or against the proposal are afraid of drawing attention to their individual practices, which are by no means in accordance with the commands of Shaka Muni.

The *Shinkokugaku* and the *Yuitsu* (Shintō) both call attention to the lack of education among Shintō priests. The *Shinkokugaku* asserts that Shintō has more to fear from the ignorance of its teachers than from Buddhism and Christianity combined. Many of these men do not fulfil the condition required by the educational Bureau of the Home Department, and hence they should no longer be allowed to hold office. Some of these priests were originally illiterate bankrupt gentlemen or useless officials. Not a few of them are unable to read Shintō prayers even, to say nothing of learned works. The support received from outsiders in aid of the "Nippon Shugi" movement will do little good as long as the chief representatives of the Shintō cult are so far behind the age in which we live, say the Shintō magazines we are quoting.

The *Kyōrin* (Shintō) in an article entitled *Nihon no Kokutai to Yasokyo* (Japan's National Constitution and Christianity) contends that it is the almost universal custom for a state to have a religion of its own and that this religion is an essential part of the state. It is so in England and Russia at the present time. Now the question is, can Christianity ever become a state religion in Japan without undergoing a thorough transformation? We are sure that it cannot, says the *Kyōrin*; and since Christianity as it is now taught in Japan is injurious to state interests, it is our duty to oppose it in as far as the law allows. The same organ under the heading of "Shintō defects" enumerates five particulars in which Shintō is deficient. (1) The lack of sincere and earnest men among her priests. (2) General stagnancy throughout the past thirty years, which is in marked contrast to

the part she played in the overthrow of the Bakufu and the re-establishment of Imperial power in the realm. (3) The dearth of young men who are sufficiently interested in the creed to become exponents of its doctrines. (4) The want of union among existing devotees. The Kōkugaku-ha, the Shinkan-ha and the Kyōkai-ha are at loggerheads with each other and engage in mutual recrimination. (5) Shintō lacks the means to make herself felt in the world. She has neither a great educational establishment, a book publishing Association, nor powerful newspapers to represent her.

We find in the same publication among the reviews of recent books the notice of a German translation of Mr. Iida Takesato's *日本紀通釋 Nihonki-tsūshaku*, a copy of which is to be found in a Berlin Museum. The *Kyōrin* is gratified to find that a book which alongside of the *Kojiki* constitutes the Japanese Bible should attract the attention of foreigners. It is much to be desired, says the *Kyōrin*, that a work on Shintō resembling the Buddhist *Kakushū Kōyō* should be published, giving an account of the principal doctrines of the sect, instead of allowing the uninitiated to grope their way amid the historical and theological intricacies of our sacred books.

THE NIPPON YUSEN KAISHA.

The regular half-yearly general meeting of shareholders of the Nippon Yusen Kaisha was held at the Young Men's Christian Association Hall, Kanda, Tokyo, on the afternoon of the 28th November. The meeting was attended by 2,036 shareholders or representatives. Mr. Kondo, President of the Company, took the chair, and in the course of his address, is reported by the *Nichi Nichi* to have said:—During the past six months the receipts of the Company amounted to yen 5,790,000, showing a development of our shipping business, and during the term 27 steamers were in service, their aggregate tonnage amounting to over 1,523,000 tons. It is a matter of great regret to me not to be able to declare any dividend, in spite of such prosperous business in the coasting trade. The cause is entirely due to the fact that the Company has lost over yen 400,000 in the European service during the term, while all commodities rose considerably in price this year, so that it has been the hardest period experienced by the Company. However, the majority of the new steamers bought abroad have satisfied the regulations for the navigation encouragement subsidy and moreover the Government will submit to the coming session of the Diet a bill for a special subsidy to the Company. Under these circumstances he trusted all present would be satisfied with the future prospects of the Company.

As soon as the President had finished his address many questions were showered upon him, some members declaring that it was quite uncertain whether the Company could obtain a special subsidy from the Government, should the coming Diet be dissolved, which is extremely likely. Another shareholder stated that the Company would never be able to compete with foreign vessels on the European line, when the N.Y.K. vessels are inferior in every point. Others called for a full account of the loss sustained on the European route. Thus the meeting was thrown into confusion. After a time, order being restored, the following report was declared:—The net profit during the period amounted to yen 56,082, to which yen 2,561 brought forward from previous account were added, making a total of yen 58,644. Of this sum yen 10,192 were written off for expenses for the construction of premises, yen 2,804 were passed to reserve and yen 45,647 carried forward to next account. The meeting dispersed after passing a resolution desiring some dividend to be paid for the term, which will be fully discussed at a special general meeting to be convened at an early date.

JAPANESE LILY BULBS.

Some months ago the *Kew Bulletin*, with all the solemnity attaching to such a deeply serious magazine, announced that a disease had broken out among recent consignments of lily bulbs imported into England from Japan. It inferred that the disease was infectious and originated in Japan. Coming from such an authority, the horticultural world paid heed to the warning and the word was passed on by newspapers to all quarters of the globe. We notice that the South Australian Government took immediate alarm and prohibited the importation of lily bulbs from Japan on the ground that they come from "an infected area." It can readily be imagined that the allegation has serious consequence for Japanese lily-growers, for the bulb export trade has attained large dimensions in recent years. With this idea in mind a representative of this journal recently interviewed Mr. Alfred Unger (of Messrs. Boehmer & Co., the famous nursery-men of Yokohama), and asked if there was any truth in the *Kew Bulletin's* statement. Mr. Unger readily gave the information desired. First he denied—and supported the denial by practical demonstration—that any disease whatsoever existed among the lily farms of Japan. What has happened is this. Some Japanese exporter, anxious to secure a bigger profit, or perhaps insufficiently versed in the trade, must have shipped to England a large quantity of lily bulbs at the wrong season of the year: perhaps, too, these said bulbs were also insufficiently matured and damp at the time of shipping. The lily bulb is a delicate tuber and will not bear handling except in the autumn, when, properly matured and hardened, they can be safely packed and shipped abroad. The reckless Japanese shipper, however, ignored these facts, and as a consequence some of his bulbs must have been bruised and injured before they reached the ship. An injured, unmatured, damp lily bulb going through the tropics naturally develops, by fermentation, a white fungus: this fungus spreads, and in a little while the whole case is irretrievably ruined. Then, when the box is opened in England, it is found that the bulbs are useless, and the cry goes forth that they are diseased. But that disease arises from a very different cause from that assigned by the *Kew Bulletin*: it is not an infectious disease acquired while the bulb is growing, as the English journal imagines. No such disease exists in Japan and the sooner this is known the better.

"YOMIURI" ON THE CURRENCY.

Comments have been made from time to time, says the *Yomiuri*, with regard to the necessity of increasing the reserve securities of the Bank of Japan. The importance of this is also recognised by the Finance Department, which seems to have decided to grant a charter for an increase of the issue of notes from 85 to 100 million *yen*, with the proviso that the amount so increased shall be taxed. To that end a bill for the amendment of Article VI. of the Banking Regulations is to be presented in the 11th Session of the Diet. Public opinion now attributes the appreciation of commodities to the expansion of the volume of currency, holders' of shares alone opposing these assertions. To expand the currency by the increase of reserve securities to a still greater extent is a very risky economic policy, and is open to severe criticism. But the grounds for increasing the reserve securities to 100 millions appear to differ widely from those propounded by shareholders. It is now alleged that the required amount of currency for Japan is 180 millions. At the end of the 26th year of *Meiji* (1893) 170 millions were in circulation, but as this amount tended to bring about an excess of imports, it may be taken as evidence of a superabundance of currency. As it is quite natural, however, that coins or notes circulated as media of exchange should increase in accordance with the progress of society, it may be supposed that the proper increase of currency from the 27th to the 30th year of

Meiji was not less than 4 millions per annum, the total increase for the past four years being 16 millions. The economic world, after the war, included Formosa within its calculations, and as this new territory requires a sum of 4 millions, the total requisite amount for the current year may be taken as 180 million *yen*. A reserve of 60 millions, or one, third, ought to be provided against 180 millions of currency. If the augmentation of reserve securities is to be attended with a corresponding increase in the issue of notes, the currency will considerably expand, and tend to increase the excess of imports and decrease the specie reserve.

BURGLARY IN MAIN STREET.

A little after 4 o'clock on Friday morning the store of Messrs. Brett & Co., No. 60 Main Street, was broken into and an attempt made to loot the till. At pane of plate glass on the left hand side of the entrance was smashed, and a hole made through which only a boy or a very slight man could enter. The front door however, was opened from the inside, and it is probable that the thief himself entered that way. There were chisel marks on the till showing that an attempt had been made to open it, but the thief was scared away before he had effected his purpose. It appears that a Japanese employé was aroused by the fire bell ringing and hearing a noise in the store called Mr. Thomas, who came down and unlocked the door leading into the shop. The police were at once summoned by Mr. Thomas, and they took charge of the store till daylight. It is believed that the burglars attempt was made by a former employé of the firm, and the police are confident that they will find him. It is not, however, comforting to know that such acts can be committed with impunity in a store lit up all night and in our main thoroughfare, but the fact is no patrol throughout the night is carried out in this street. A policeman may generally be found at the corner by Messrs. Cornes & Co.'s but one may walk Main Street all night without meeting any police on patrol.

TRADE OF THE YEAR.

In a previous issue we announced that the imports from January this year amounted to 177,860,000 *yen*, being an excess over exports of 46,560,000 *yen*. We now take from the *Shogyo* the comparative figures for the various staples of import for two years, as follow:—

	COMMODITIES INCREASED.	
	Imports, 1897. Yen.	Increase, 1896. Yen.
Cotton	39,190,000	10,870,000
Machinery, &c.	10,923,000	5,856,000
Locomotives and cars ..	4,174,000	2,705,000
Kerosene oil	6,511,000	1,211,000
Railway materials ..	1,558,000	533,000
Rice	14,491,000	10,866,000
Sugar	16,225,000	5,787,000
Beans, peas, &c.	4,121,000	1,363,000
Rails	2,911,000	766,000
Iron, bar, and	2,293,000	392,000
	COMMODITIES DECREASED.	
	Imports, 1897. Yen.	Increase, 1896. Yen.
Muslin de laine	3,148,000	2,435,000
Cotton fabrics	739,000	1,746,000
Italian cloth	1,445,000	9,200
Shirtings	3,048,000	493,000
Iron nails	1,148,000	116,000
Watches	1,503,000	56,000
Cotton yarns	7,344,000	2,165,000
Cloth	1,678,000	1,463,000
Flannel	1,994,000	734,000
Oil cake	2,566,000	386,000
Wool	784,000	60,000

It will be seen that in spite of imports having increased on the whole in such items as materials and machines, a marked decrease is discernible in articles of luxury. The imports of cotton and rice show an increase of over 10 million *yen* each in value over the figures for the previous year. The failure of the crops and the decrease in the imports of articles of luxury are unmistakable signs of the universal decline in the trade prospects of the interior.

THE TORI-NO-MATSURI.

We are confronted by another of those extraordinary libels of which the Japanese are occasionally the victims, not of deliberate intent, perhaps, on the part of the libeller, but because he will not take the trouble to inform himself of facts before framing accusations. The instance to which we now allude is particularly unfortunate because it occurs in connection with American Thanksgiving Day, and the accusation against the Japanese is introduced with the apparent object of enhancing the beauty and purity of the Western observance, though, it must be confessed, the libeller is obliged to drag in his materials neck and crop in order to effect the desired contrast. As is usual wherever recklessness and ignorance are concerned, the columns of the *Japan Gazette* are responsible. Having explained that Thanksgiving Day is a fête inaugurated by the Pilgrim Settlers at Plymouth, in New England, to express gratitude for their first abundant harvest, and having noted that the Japanese festival of *Nii-nama*, in honour of the new rice, bears a resemblance to the American observance—a somewhat "thin" remark seeing that harvest celebrations are common to nearly all countries—the writer in the *Japan Gazette* goes on to say:—

The manner of its observance for the last thirty or forty years is far from comforting to lovers of purity, and of the permanent prosperity of the country, especially as seen among the lower and even the middle classes of Society. That is if Wednesday's exhibition in Yokohama be at all a criterion of its observance elsewhere. What is referred to is that it consists in nothing more nor less than the worship of the God of prostitution—if it be not a profanation of language to associate two such words together! It is possible that this being *Tori no toshi*, or the "Year of the bird," and yesterday being the second *Tori no hi* or "Day of the bird" may have accentuated this worship. "The bird" is chosen as the sign of the zodiac favourable for increase of gain in places of prostitution. *Tori* means to take, clutch; and *tori*, bird, is one that clutches in its claws whatever it can get hold of for its use. The eagle is the King of birds, hence the god's name is *Washi no Dai-myōjin* or Great Eagle God. It does not seem to be far removed from the worship of *Kompira*, the Crow God of Sanuki. In the Yoshiwara-ward there is a temple at the end of one of the principal streets running through that quarter, that can be seen from a distance without the ward, this is for the benefit of the inmates of all the big establishments there located. Questionable as all that may be even for them, what would be thought of crowds of well-dressed people—men and women leading their little daughters by the hand in bright garments flocking there to worship too! This was actually the case to the extent of thousands on Wednesday; the streets in that part of the city were thronged by those coming and going. There was nothing reprehensible in appearances outside. The people were orderly, with a few exceptions of low fellows, who either had bought or were selling the *papier-mache* symbols of the seven Gods of luck, cartloads of these were to be seen in certain quarters on Wednesday and the attendance kept up till midnight.

In refreshing contrast to such impurity and childish puerilities was the course of lectures held Wednesday afternoon and evening at the *Shioh Church*, Onoyecho, under the auspices of the Evangelical Alliance of Japan, &c.

It is difficult to make out from this confused statement whether the writer intends to suggest that the harvest celebration in Japan is connected with some Paphian observances or rites. If he has any such idea, he may dismiss it from his mind at once, for it is a complete delusion. There is no obscenity, however, about his remarks on the subject of the *Tori no Matsuri*, or *Tori no Machi*, as it is commonly called. He says that a bird (*tori*) is selected for worship as being "the sign of the zodiac favourable for increase of gain in places of prostitution," and he then indulges in some fine morality about the horror of "crowds of well-dressed people—men and women leading their little daughters by the hand in bright garments—flocking there to worship." The writer of this silliness—for truly we know not what other term to apply to it—seems to be connected with the Evangelical Alliance of

Japan, which he proceeds to eulogise vicariously by referring to certain eloquent addresses delivered by its members. We take him, therefore, to be an honest and well meaning man, not one of those that delight to misrepresent Japan merely for the sake of discrediting her. Hence he will be sorry to learn that his idea about the "bird" being "the sign of the zodiac favourable for increase of gain in places of prostitution" is mere moonshine. There is no such Paphian sign of the zodiac, and the "Bird Festival" has no more to do with prostitution than the Evangelical Alliance has. We quote here for his information and for that of any whom his statements may have misled, an extract from the work "Japan" which is now in process of publication in Boston:—

Some time in the middle ages, a great eagle made its appearance at Ajiki, in the province of Shimosa, which lies on the eastern shores of Edo (Tokyo) Bay. The eagle, of course, signifies everything that is majestically aggressive and tenaciously acquisitive. It thus becomes to the Japanese a symbol of good fortune. The Shimosa people built a shrine in honour of their visitor, and covered the walls with votive tablets, depicting an eagle bestrid by a man in official robes—"a commoner rising to rank and office by the aid of wings that soar and talons that capture." By-and-by, the capital of the Tokugawa grew so big that it drew to itself whatever was notable in the neighbouring provinces. The eagle's shrine found its way to the suburbs of the metropolis, and in the Shitaya district, within sight of the Paphian quarter, became a place of pilgrimage for every one craving the gifts of fortune—the wrestler, the courtesan, the actor, the dancing girl, the jester, the *racqueur*, the musician, the tradesman and the apprentice. Nothing that can be called a ceremony is associated with the eagle's fête—the *Tori-no Machi* (abbreviation of *matsuri*), or worship of the bird, as the people call it. Only on the "bird days" in November—perhaps two days, perhaps three if the calendar is kind—tens of thousands of people flock out to this shrine among the rice fields, and, after a brief act of worship, purchase harbingers of luck in the shape of big cakes, parent potatoes, millet dumplings, and bamboo tea-whisks. Stalls for the sale of these homely articles occupy all available spaces within the temple enclosure and along the avenues leading to the gate, and as the etiquette of the eagle requires that there shall be no bargaining—when did the great bird stop to discuss the preliminaries of a capture?—the hucksters drive a roaring trade, especially at the close of the day when their wares are nearly sold out and belated worshippers see a risk of returning empty-handed. The rake, as part of the paraphernalia of a pursuer of gain, explains itself. But there is a strange feature about these eagle rakes. Their teeth are said to be made from the wood of coffins. At cremations, if economy has to be practised, the corpse is removed from its casket and exposed to the direct action of the flames. The casket then becomes the property of the crematory and is purchased by the rake-makers. There is no explanation of such a singular custom, nor any evidence that it is observed on principle. The parent potato typifies humble ambition. Buried underground and growing in oblivion, it is at all events the head of a family. "Better be the comb of a cock than the tail of an ox." Millet dumplings are associated with the orthodox group of lucky articles by a play upon words. To "clutch millet with wet hands" is a popular metaphor for greed. *Mochi*, which signifies a dumpling, signifies also "to hold." Thus "millet dumpling" becomes a metaphor for grasping largely and holding firmly. The strength of the people's faith in these pilgrimages, prayers and purchases is evidenced by the crowd that the city pours out to the *Tori-no Machi* every Fall, and by the eager happiness of the worshippers' mien. But if any members of the upper classes go, it is only to look and to laugh.

We shall be curious to see what course the writer in the *Japan Gazette* will now pursue. Will he allow his slander to remain unretreated—his libel upon the "well-dressed people that lead their little daughters by the hand in bright garments" to worship at the shrine of his imaginary sign of the zodiac, or will he frankly confess that he has been misled?

A London telegram dated October 28th, says:—Two Greek officers are being tried by court-martial on charges of permitting contractors to supply useless torpedoes for the navy during the late war with Turkey.

ST. ANDREW'S BALL.

The St. Andrew's Ball given in the Public Hall, Yokohama, on Tuesday evening, will be recorded in the social annals of our treaty port as one of the most successful of a very successful series. To begin with, the Committee wisely and courageously cut down the list of invitations to reasonable limits, thus doing away with the dreadful crush that in recent years spoilt the function for so many. Last night the hall was never inconveniently crowded, not more than 300 persons being present at the busiest time—a most delightful state of things. Another significant feature was the large increase in the number of killed dancers. Among the tartans worn by these gentlemen were to be noticed the Clan Duff, the Clan Stewart, the Clan Fraser, the Clan McArthur, the Clan Grant, and several "crosses"—whatever that they mean. The kilts added brilliancy to the gathering, being effectively set off by the many handsome gowns worn by the ladies. But when are we to have the bag-pipes at the Scots' Ball? The Committee in charge were, President, Mr. W. Ross; Vice-President, Mr. W. F. Mitchell, Committee, Messrs. C. W. Ure, G. Philip, R. W. Borthwick, J. McArthur, H. R. Mair, R. C. Ross, W. G. McVicar, C. M. Duff, R. B. McKinnell, J. Steven, C. I. Fraser, and H. W. Fraser, Secretary. It would be unfair, perhaps to particularise where all worked so hard in the interests of the guests, but Mr. Duff's labours cannot be passed over without mention. He threw himself into the affair with all his accustomed ardour, and complete success crowned his efforts.

The decorations, as usual, were very pretty. Flags were largely used both on the walls and in the alcoves, while big banners were suspended from the roof. The arms of many old Scottish families of credit and renown were used as mural decorations, and the red lion of Scotland, with the silver cross on a blue ground, the emblem of St. Andrew, were conspicuous everywhere. The stage was made into a wistaria bower, the exits into the rooms behind being through clever representations of baronial hall-ways. The work of decorating the hall and its adjuncts was in the hands of Messrs. G. Philip, H. R. Mair, C. M. Duff, and G. McVicar, and they carried out their work very pleasingly. Some trophies of arms were arranged here and there in the Hall by sailors from H.M.S. *Redrole*. Dancing began, on a capital floor, shortly before 9.30 o'clock and the Town Band were kept going till an early hour this morning. The programme of dances was as follows:—

MARCH.

- 1.—Highland Schottische
- 2.—Waltz
- 3.—Polka
- 4.—Caledonians
- 5.—Waltz
- 6.—Highland Schottische
- 7.—Lancers
- 8.—Waltz
- 9.—Reel
- Extras { I.
- II.
- 10.—Waltz
- 11.—Caledonians
- 12.—Reel
- 13.—Waltz
- 14.—Lancers
- 15.—Waltz
- 16.—Barn Dance
- 17.—Waltz
- 18.—Two Step

This was ostensibly the full programme, but several "extras" were worked in, though eventually "Auld Lang Syne" was sung by the assembled company, and the band packed up their instruments. Still the joyous dancers were loth to leave, so a lady pianist improvised some beautiful waltzes, using as her *motif* the haunting, plaintive airs of bonny Scotland, a climax being reached with "Scots wha hae." Then, and then only, did the dance break up, the last few ladies leaving about 3 o'clock.

Supper was served in the smaller hall, which also was nicely decorated. The "great chieftain

o' all the pudding race—the haggis," duly made its appearance and was properly received with all the honours due to its ancient merit, more especially at that peculiarly convivial assembly, popularly known as the second supper, which took place after the ladies had retired.

SUPPER MENU. "SCOTLAND YET!"

Roast Turkey.	York Ham.
Pheasant.	
Game Pie.	
Ye Haggis. (A Donal.)	Mint Sauce.
Roast Mutton	Corned Beef.
Roast Beef.	Corned Tongue.
	Salad.
Cream Jelly.	Gelée aux Fruits.
	Charlotte à la Russe.
Gelée au Kirsch.	Lenon Jelly.
	Pastry.
Vanilla Ice Cream.	Strawberry Ice Cream.
	Beef Tea.

During the evening Mr. Duff played one reel, and Mrs. Wheeler the other, some 16 couples taking part in them. We should not forget to mention that the following telegrams were attached to the bulletin board just before the dance began:

From Kobe:—

Brother Scots in Kobe send congratulations—Hutton.

From Hongkong:—

Chief Bell Irving and brother Scots send greeting to Yokohama Scots—Wood.

Altogether it was a memorable St. Andrew's Ball, enjoyed by all who participated in its fun and frolic.

WILLISON'S CIRCUS.

The "Circus has come to town," and opened on Thursday night under considerable difficulties, as announced by the management during the course of the evening. The seating accommodation, and the general mounting of the show were not what the public of Yokohama have been accustomed to, but this was to a great extent accounted for by the fact that some eight car loads of gear and outfitings belonging to the Circus, *en route* from Oauka, have not yet been delivered, while we understand that a Japanese contractor who had engaged to provide a number of chairs, failed to carry out his contract at the last minute. If the surroundings were not all that could be desired however, the programme of the evening's entertainment was sufficiently full and varied to suit the taste of the most exigent of spectators. Passing over the performance of "Our Band" without comment—for we don't go to a Circus to hear music—the various acts presented from the Jockey Entrée at the start, to the Wild West Quadrilles at the conclusion of the entertainment, were excellently performed. The four "Lilliputians," two little mites of girls and two boys, apparently of from five to seven years of age, were wondrously dexterous and amusing in their performances. Miss Ida Vernon, Miss Elsie St. Leon and Miss Alice Walllett, in their various equestrian acts deservedly won the enthusiastic plaudits of the spectators. The Royal Amazonian Indian Club act, winding up with the swinging of flaming torches in place of clubs, was very effective, and the wonderful evolutions of the Virets in their contortion act, "Legmania," was in itself well worth a visit to the Circus. Miss Freda Willison was most successful in her dashing four horse riding and driving act, and Mr. Harry Dixon performed the bounding jockey act with some additions never before witnessed in Yokohama. The two clowns Selvini, as usual provoked plenty of hearty laughter and amusement by their antics and jokes, and in addition there were amusing performances by trick ponies, a donkey, Ceylon bull, and an African monkey, who solemnly imitated many of the most difficult feats of accomplished human riders on pony back. There were many other acts in the programme which we have not space to enumerate, but which our readers will doubtless see for themselves during the course of the next ten days.

BAZAAR AT THE PUBLIC HALL.

A bazaar under the auspices of the Yokohama Temperance Society (Japanese) for the benefit of the Society's brass band, was held in the Public Hall on Thursday afternoon and evening. The Hall was decorated with bamboo sprays and shrubs in pots, while the stage was carpeted and furnished as a drawing-room or lounge, the Band being accommodated in one corner, while a selection of piano-forte music was also given by the bluejacket of H.M.S. *Redpole* who rendered such efficient service at the entertainment recently given by the musical troupe of that vessel. The centre of the Hall was occupied by a large stall in the shape of a horse-shoe, which was devoted to the sale of articles contributed by members and friends of the Society. These comprised fans, lanterns, toys, carvings, silk handkerchiefs, artificial flowers, and a host of fancy nic-nacs of all kinds, besides some more useful articles of ladies' attire, etc., presided over by half a dozen Japanese ladies and girls. Round the sides and at the end of the Hall, were arranged a number of stalls, conducted by various storekeepers, we believe, in which a vast variety of Japanese wares and fancy articles were exhibited for sale, such as slippers, handkerchiefs, and other silk goods, plaques, *netsukes*, carvings, photos and curios, flowers, fruits, cakes and confectionery, etc., in profusion. In the small Hall a collection of *kakemono* and water colour drawings was displayed, the prices for which ranged from \$2 to \$10, and some very pretty little "bits" of landscape might be found among them. Here was also to be found a fishing well in which the little ones angled for toys at 5 cents a head, and a kind of parlour Aunt Sallie in which, instead of sticks, soft balls were thrown at the figures to be knocked over. During the course of the afternoon and evening several exhibitions of jugglery and dancing were given at the back of the stage, and at 10 p.m. there was an auction of unsold goods. The attendance in the afternoon of foreign ladies and children, and of Japanese, was fairly large and was considerably increased in the course of the evening, and it is to be hoped the Society have netted sufficient to keep the Band in wind for some time to come.

FORGERY OF CHEQUES.

On Thursday morning, about 11 o'clock, a young Japanese named Yokoyama, employed by M. de Micheaux, went to the Van Tai Exchange Shop, No. 72, Settlement, and succeeded in cashing a forged cheque on the Specie Bank for *yen* 600 made out in the name of Strome & Co. In the afternoon the *banto* of the Exchange Shop took the cheque to the Specie Bank, where it was at once found to be a forgery. The *banto* went to No. 12, Messrs. Strome & Co., and on making inquiries learnt that the firm had not drawn the cheque. The matter was at once reported to the Kagacho Police, who from the description given them by the people at Van Tai's, succeeded in identifying and arresting the culprit during the course of Thursday afternoon. The money was also recovered, and another forged cheque, for 200 *yen* was found upon the person of the prisoner. An accomplice of Yokoyama, named Takikawa Ichizo, was also arrested and is undergoing examination at the Kagacho Police Station.

A SHANGHAI "BUNDER."

The *Fiji Shimpō*, in an extra this morning, publishes the following telegram:—

Shanghai, Dec. 1.

According to a report from trustworthy sources, the three Powers, France, Russia and Germany are about to plunder territories in the Far East in combination. Russia is to seize Korea and North China; Germany Shantung, and France Formosa and Fuhkien.

NAVAL COURTS MARTIAL IN HONGKONG.

We take from the *China Mail* the following reports of naval courts martial held in Hongkong on November 17th:—

A court martial assembled on board the *Victor Emanuel* this morning for the trial of the C. E. West, A.B., for desertion from H.M.S. *Alacrity*. The court was constituted as follows:—Capt. H. T. Dudding, *Iphigenia*; Commander R. C. Sparkes, *Linnet*; Commander C. J. Kingsmill, *Archer*; Commander Henderson, and Lieutenant Plumer, *Tamar*. Mr. V. A. Lawford was Judge Advocate, and Lieutenant Bellairs, of the *Tamar*, was prisoner's friend. The prisoner, who gave himself up on board the *Rainbow*, at Yokohama, stated he deserted from the *Alacrity* on 30th June, 1894. He said that he wished to return to England, as his warrant for apprehension had been withdrawn, to take out English certificates. Since he deserted he had served in several American sailing ships. The prisoner begged the Court to take into consideration the fact that he had been detained on H.M. ships *Grafton* and *Tamar* for a period of five months, and hoped that his previous good character in the service might be taken into consideration in mitigation of sentence, and also the fact that he voluntarily gave himself up to the authorities in order to rectify as far as possible the charge of desertion, and in doing so gave up a good position as second officer of the *R. D. Rice*, at Yokohama. The Court imposed sentence of ninety days' imprisonment with hard labour.

Two A. B.'s from H.M.S. *Peacock* were tried by Court martial to-day, on board the *Victor Emanuel*. The following officers comprised the Court:—Capt. H. T. Dudding, *Iphigenia*; Commander R. C. Sparkes, *Linnet*; Commander C. J. Kingsmill, *Archer*; Commander Henderson and Commander W. H. F. Taylor, *Tamar*. Mr. V. A. Lawford was Judge Advocate. The prisoner's friend was Mr. E. Innes, Assistant Paymaster of the *Peacock*. The first prisoner, W. J. Brangan, A.B., pleaded guilty to charges of desertion and theft. When the ship was at Yokohama, prisoner stole 175 *yen* from the box of a petty officer. He was afterwards arrested, dressed in plain clothes, at the Yokohama railway station, with a ticket for Kobe in his possession. He was sentenced to be imprisoned for twelve calendar months, with hard labour, and to be dismissed the service. Charles Hodgson, A.B., was charged with similar offences and also refusing to obey orders. The circumstances of the case were exactly similar, he having assisted in the theft. He was found in company with last prisoner. Sentence of two years' imprisonment, with hard labour, was imposed, and prisoner was also dismissed his ship.

SILK EXPORTATION FROM KOBE

Once again the project of making Kobe a centre for the export of silk produced in the Sanyo and Sanin districts is on the tapis. It is urged that too great a delay is incurred in sending silk from these districts to Yokohama, and consequently heavy losses are incurred. This is more particularly the case with Japanese silk houses who export silk direct, and the Hisuisha, a silk company in Shimaue Prefecture, has abandoned that branch of its business entirely, finding it very unprofitable. But if Kobe is made a silk centre the prospects of direct export would be improved, urge the vernacular papers, and steps should be taken to provide proper facilities at once.

JAPANESE BONDS.

The Finance Department notifies the issue of Five-per-cent. Bonds to the amount of ten million *yen*, at 94.20 *yen* per 100 *yen* Bond. The issue was made on the 26th ultimo, and as the Bonds were not placed upon the open market, the exact nature of the transaction remains to be explained.

It is stated that the officials of the Finance Department have resolved to abolish the different varieties of public loan bonds, and to have two kinds only, namely, War Bonds and Five-per-cent Bonds, the full designation of the latter being *Dai Nippon Teikoku Gohu riisuki Kosai* (Great Japan's Imperial Five-per-cent Bonds).

DANGERS TO NAVIGATION.

Captain Farquhar, of the steamer *Benledi*, which arrived at Yokohama from Kobe on Wednesday afternoon, reports passing the wreckage of a Japanese schooner between Rock Island and Vries Island. Apparently the schooner had been run into by some other vessel and was dismantled and water-logged. He passed close to her but saw no signs of life. Captain Farquhar also passed another capsized schooner inside of Sagami.

CHINESE NEWS.

Shanghai seems to be singularly apathetic about the Kiao-chow affair. The last received batch of the *N.-C. Daily News*, from the 23rd to the 26th of November, contain no editorial word about the incident. A complication that may involve most momentous international results appears to awaken little interest.

The recent trouble at Hankow, when German man-of-war's men were stoned by a mob, appears to have produced a good effect, owing, doubtless, to Baron Von Heyking's vigorous action. The Viceroy Chang has caused proclamations to be posted at Wuchang, Hanyang and Hankow, exhorting the people to treat foreigners courteously and promising that any neglect of his exhortation will be severely punished.

The mausoleum which is to serve for the Empress Dowager of China, has been in process of construction for ten years, and is not yet completed. It lies at some distance from Peking, and the Emperor is understood to be desirous of having a railway built to communicate with it.

The Chefoo correspondent of the *N.-C. Daily News* says that, according to rumour, considerable purchases of land in the neighbourhood of Kiao-chow have been made by German residents of Shanghai, Chefoo, and so forth.

"A Shaohsing, Chêkiang, despatch of the 18th instant," writes the *N.-C. Daily News*, "states that on the 14th instant, Fu, the prefect of that city issued a proclamation informing the people of the prefecture that Governor Liao had given power to two syndicates to collect subscriptions for the building of a railway between Ningpo and the first named city. The proclamation further explains to the people that the proposed railway will be entirely built with native capital and that this is 'not a case of encroachment and seizure of land, and giving special advantages to foreigners, nor will any foreign shareholders in the company be permitted. The only foreign element in the affair will be the employment of a Western Engineer to survey the country. The proclamation winds up with calling upon the people to treat the Surveyor of the proposed Railway properly.'"

The Chungking correspondent of the *N.-C. Daily News*, speaking of the return of Mr. Kato, the Japanese Consul, says:—

We are anxious to hear what Mr. Kato has to say about the introduction of steamers on the upper Yangtze by his fellow countrymen. It will be to the everlasting credit of the Japanese if they take up this matter and push it through to its logical end. As for Britain or America or other Powers attempting it, one might as well expect the conservative Chinese to undertake the business. In spite of all the loud talk of sending steamers here on the part of European merchants it is a fact that the river has not yet been adequately surveyed! There does not appear to be very much enthusiasm about that. Hope is now centred in the enterprise of the Japanese. May they not fail us! And may their reward be great!

The second ordinary meeting of the E-Wo Cotton Spinning and Weaving Company has been held. It appears that the total cost of procuring land, erecting buildings, and providing plant, has been 1,014,732 *Tls.*, and that there are nearly thirty thousand spindles at work. The mill opened with 4,000 spindles on the 10th of May. A dividend at the rate of

7 per cent. per annum has been paid. The Company owes to Messrs. Jardine, Matheson & Co. a sum of 246,822 Tls., but that amount is more than balanced by the cotton yarn in stock. Care was taken at the meeting to preserve secrecy with regard to the salaries of the employes and the cost of cotton. We notice that the buildings involved an outlay of 371,224 yen, approximately; a figure that will look very large in Japanese eyes.

The Shanghai Bicyclists' Association has been dissolved. The first task that it had to undertake was that of road-repairing, and it soon found that funds sufficient for such a purpose could not be collected.

A correspondent writing from Wen-chow to the *N.-C. Daily News*, says:—

A week or two ago the Japanese gunboat *Oshima* was here. It fell to our lot to go 50 miles inland immediately afterwards and we heard with amusement the wondrous yarns told, increasingly big the further we went, of the four, six, eight, nine foreign gunboats which had just arrived in Wen-chow, and of the thousands of foreign soldiers parading the streets. We heard in place after place how the forts all down the river had been handed over and how the Taotai, prefect and *hsien* had all given over their seals of office. The story of the man who disgorged the three black crows pales into insignificance in China. What the local yarn spun out to be by the time it got to the borders of the next prefecture forgetfulness of the rules for working out a geometrical progression prevents our stating.

One or two things we do know however; that the *Oshima* was the only gunboat here while all these rumours were flying; that her sailors numbered only a hundred or so and when ashore behaved themselves far better than the representatives of higher civilisation; that some funny English was lisped with bated breath; that the Japanese Vice-Consul went through the elaborate ceremonies connected with recognising the Wenchow *Chên'ai* (Brigadier General) as his adopted father, and himself stood in a like relationship to the *Chên'ai*'s grand-nephew, whereby they all became happily related together. Do the Japanese do this kind of thing wherever they go in China now? And is this a new method of cementing national relationship—the Japano-Chinese form of the modern Franco-Russian embrace-all-round-national *entente cordiale*?

JAPANESE FACTS AND COMMENTS.

We learn from the *Kokumin* that a scheme is on foot in Tokyo to institute a library of medical works for the use of physicians. Mr. Toyama and two other promoters of the enterprise are engaged in obtaining subscriptions and donations of suitable books, and their efforts have already been rewarded by subscriptions from many medical practitioners and booksellers. The proposed library will be located in the premises of the Young Men's Club, at Kanda, and will be kept open to visitors day and night. The scheme is a useful one and well worthy of support.

The export of Japanese fans to Europe is, the *Osaka Asahi* says, increasing year by year, and fans are now classed among staple exports. Statistics compiled in Kobe show that the number exported this year has increased by 4,886,569, or 73,093 yen in value, over the figures for the previous year. Of late, Spain has engaged in the manufacture of fans in imitation of the Japanese products, and has succeeded in realizing considerable profits by their export. These circumstances show that the utmost precaution must be taken by the native dealers to retain the trade.

At Nishinomachi, in the town of Kako, Hiroshima Prefecture, lived a man named Nakao, with his wife and three children. He formerly belonged to the Forestry Office in the town, but was some time ago transferred to the Mine Superintendence Office at a monthly salary of twelve yen. In September last he resigned his post and went to Formosa, but had very bad luck and shortly found himself reduced to extreme poverty. His relatives, to whom he had applied for assistance, declined to aid him and he was moreover required by his father-in-law to

separate from his wife. Thus overwhelmed with misfortunes, the unhappy man killed his wife and three children, and then committed suicide by *seppuku*.

The term "strict discipline of officials" sound rather strange in connection with the procedure of the present Cabinet, says the *Yoroku*. The councillor's room in the Home Department is virtually an editorial office of the *Kokumin Shimbu*, where three or four representatives of that journal are daily in attendance. What is more strange is that two hangers-on from Count Kabayama's house and one from Viscount Takashima's are daily employed in the *Kokumin Shimbu* Office in editorial work. The *Yoroku* is rapidly qualifying to be called the "boss" sensationalist of Tokyo.

According to the *Chuo*, a scheme is maturing for the cutting of a canal from Osaka to lake Biwa and from Biwa to Mikata in Wakasa, so that through communication may be effected between the northern sea and the Chingoku straits. Funds needed for the work will be obtained by appropriating nine million yen set apart for the repair of the river Yodo, and prisoners will be employed as labourers under the supervision of sappers. Applications in the above terms have already been presented to the Ministers of War and of Home Affairs over the signatures of certain enterprising men in Ibaraki prefecture.

Not a little anxiety has been felt by the economic community as to the organisation of the Formosan Railway Company. However, by the exertions of Messrs. Shibusawa and Okura and a few other influential merchants, most of the remaining shares of the Company have been disposed of, and schemes have been formulated for the introduction of foreign capital. A meeting of the Organisation Committee was held at the Imperial Hotel on the 29th ultimo, when it was decided that Mr. Mizuno should be appointed President of the Company. It is reported, says the *Hochi*, that the organisation will be completed within this year, and that the delivery by the Government of the existing railway will be effected so that traffic may be commenced under the supervision of the company from the 13th January next, as originally stipulated.

Mr. Takano is reported by the *Yomiuri* to have presented the following note to the Premier on the 22nd ult.:—"Some time ago I returned to Formosa to resume my post, but was prevented from doing so by the police by brute force. On making enquiry I was told that this force was applied to me in accordance with instructions from the Central Government. I now beg to request to be furnished, in the presence of the various Ministers of the Cabinet, with the precise instructions given to the Formosan Police, and being desirous of expressing my opinions on the subject, I further beg that a day be appointed for my interview." To the above representation no answer was received from the Premier up to the 29th ultimo. It is supposed that no notice will be taken of Mr. Takano's communication. Should this be the case, Mr. Takano will forward an address to the Throne insisting upon the independence of the Judiciary.

The present Government, remarks the *Yomiuri*, being deserted by all the political parties, has fallen into a state of serious embarrassment and is apparently destitute of means for carrying out its policy. Young tacticians connected with the Government, however, are holding secret meetings to deliberate upon the policy to be pursued in the next session of the Diet. Some of them advocate the purchase of members, and with that end in view have sought access to members overwhelmed with debts or anxious to obtain an official position. But the opposition has been found too strong. None of the members of the Diet dare to reveal their real intentions and they refuse to meet the overtures made by their tempters. The tacticians, however, are not at all disappointed, for they are still in possession of a delicate scheme by which the Government's antagonists may be subdued. Their ultimate aim, in the

case of failure, is to dissolve Parliament twice, and exercise their influence in the following elections to the full extent of their means. We (*Japan Mail*) reproduce this merely as a sample.

Between Iriyamoto in Nikko and the Kawamata hot springs in Kuriyama, a silver mine has been worked for some time by Mr. Takahashi, a citizen of Nikko. This gentleman failed, the *Chuo* says, to obtain satisfactory results from the enterprise, and nearly exhausted his resources. His perseverance, however, has eventually been crowned with success by the discovery of a vein containing a great quantity of gold. Specimens of the ore having been forwarded to the Department of Agriculture and Commerce for analysis it proved to contain gold in considerable quantities. Other samples were also sent to England, France, and Germany, for a closer examination. It is said that 1,000 *kwamme* of the ore contains 13,200 *monme* of silver and 500 *monme* of gold. The daily output of ore exceeds 2,000 *kwamme*.

Loans issued by the Japan Industrial Bank since its organisation up to the 25th of this month amount to 340,150 yen, of which 130,150 yen were delivered in two sums to public corporations and the remaining 209,000 yen in seven sums to private individuals. Of these private loans three were granted to manufacturers and the balance to agriculturists. Some of the loans were for a fixed period of ten years, or to be repaid in ten yearly instalments, the rate of interest being 9 per cent. for the former and 8 per cent. for the latter. Other applications have been received and are now under investigation. Among these are two spinning companies at Amagasaki and Wakayama and two other companies in Okayama and Fukuyama. It is expected that the amount of loans issued by the Bank will considerably increase by next month.

The *Yoroku* remarks that for some time past Japan's policy in her dealings with Korea has been characterised by lethargy, while the ascendancy of Russia in the Peninsula has reached a climax. The Koreans, supine and enervated as they are, have at last taken fright at Russia's action, fearing the loss of their independence, which they have come to believe can only be secured by the aid of Japan. The Court and Ministers are therefore doing their best to cultivate a greater intimacy with Japan. It might, to the casual observer, appear that this was a matter for congratulation to Japan; but no faith is to be put in Korean friendship. Koreans are as unstable as water; yesterday they flattered Russia, to-day they seek favour with Japan, and to-morrow they may turn to some other nation for friendship and support. Their present leaning towards this country is therefore not to be relied on.

According to the *Tokyo Asahi*, the currency of Formosa consists of Japanese silver yen, convertible notes, and subsidiary coins, besides the four others classes known as *Soryo*, *Sogin*, Mexican dollar, and Formosan *monsén*. The first mentioned coin is virtually a silver yen stamped at an exchange office, while the second is also of the same nature, the difference being that the coin has been stamped—"chopped"—at two or three exchange offices. It is also called the Tamsui dollar and is used in both public and private payments. These coins, however, are liable to serious fluctuations, and are far from being uniform in value. No investigation has yet been completed as to the amount of coins in circulation in spite of officers having been specially despatched by the Finance Department to report on the subject. It is said that the amount of silver yen which passed the Formosan Custom House for exchange during the past two months reached 3 millions.

Mr. Matsumoto Taikichi, manager of the Nihonbashi branch of the Kanegafuchi Spinning Company, was arrested on the 22nd ultimo on a charge of embezzling the company's funds to the amount of 16,300 yen between the 24th year

of *Meiji* and June this year. He is reported to have squandered the money in rice speculations and gambling.

Mr. Hamasaki, ex-Judge of the Formosan High Court, is reported by the *Yorodsu* to have returned the notice of dismissal sent him by the Cabinet, with a note stating that his dismissal was contrary to Article LIII. of the Constitution and he declined to accept it.

It has already been reported by a telegram dated the 25th ult. that a tunnel on the Central Railway, now in course of construction, collapsed, causing the death of several persons. The scene of the disaster, according to the *Yomuri*, was No. 5 tunnel in Tamakawa, Kasugai district, Aichi prefecture, about ten *cho* west of the boundary between Owari and Mino. The tunnel is about 50 *ken* long and the work of bricklaying was in progress when the calamity occurred. On the afternoon of the 21st ultimo, stones and rocks from the hill above the eastern entrance suddenly fell in and blocked a space of about five *ken*. Some of the men working inside, six in all, were crushed to death, the debris extending over an area of fifty *tsubo*. As it was found impossible to remove the fallen stones and rocks by human labour, 300 dynamite cartridges were employed to assist in the work, and no less than 300 coolies were engaged day and night in clearing the tunnel. On the 5th day the bodies of the six victims were dug out, some with the heads and ribs broken, while others were battered beyond all recognition.

The *Shogyo* states that a united meeting of the three emigration companies—Hiroshima, Japan, and Morioka—is shortly to be held in Hiroshima to discuss the means of obtaining personal security from emigrants to Hawaii and also of increasing the charges for dealing with them. The principal subjects to be presented for deliberation will be as follows:—(1) Agents engaged in the emigration business shall collect from each emigrant a sum of fifty *yen* as security against his desertion. (2) The fees have hitherto been limited to twelve *yen*; immediate payment for each person shall be increased to eighteen *yen*. (3) Suitable means shall be adopted for the appropriation of security money at the discretion of agents in cases of desertion or other extraordinary occasions. (4) If it is found that serious difficulty exists in collecting the security in places where emigration is for the first time undertaken, no security shall be received, provided that a fee of 20 *yen* be paid by each emigrant. (5) Agents are under obligation to afford relief to the emigrants in times of illness or other special distress, during the term of contract. (6) The savings and security of emigrants shall only be paid after their return to Japan. (7) The agents for immigration in Hawaii shall be required to adopt a uniform system in dealing with immigrants.

At the meeting of *saké* brewers lately held in Tokyo the following resolutions were passed:—(1) Should the bill for increased taxation be passed in the next session of the Diet, steps shall be taken by the *Saké* Brewers' Corporation to organise a company for the import of alcohol, with a capital of one million *yen*. (2) The registration of securities to be given for payment of the tax shall be effected according to Article XXXI. of the Registration Law. (3) All the *saké* brewers throughout the empire shall for this year produce only half the amount brewed in ordinary years. The members present at the discussion numbered 105. On the morning of the 29th ultimo, representatives of the *Saké* Brewers' Corporation repaired to the Finance Department, and having obtained an interview with Mr. Tajiri, the Vice-Minister, enquired whether the rumour as to the proposed increase of the tax on *saké* was true or not. "No definite answer could be given," was the reply. "Such a thing," added the Vice-Minister, "might possibly happen, investigations for the proposed increase having been completed." The Vice-Minister also stated that the laws passed by the Government in combination with the Diet could in no way be changed; that if the

saké brewing bill is to be revised, it must be revised radically, and that any scheme calculated to prohibit the import of foreign alcohol can only be effectually carried out after the enforcement of the revised treaties. The representatives are said to have left the office resolved to oppose the Government to their utmost.

NEWS OF THE WEEK.

The *London and China Express* regrets to learn that the health of Sir Ernest Satow's mother, which occasioned his Excellency's visit to England, does not show any improvement.

Russian papers complain that the Siberian Railway, instead of civilizing the regions through which it passes, is teaching the natives the art of robbing trains, which is greatly in vogue.

A Hongkong contemporary understands that Mr. R. E. Bredon, whose appointment to the position of Deputy-Inspector-General of the Chinese Maritime Customs, has just been announced, will become Chief Secretary to Sir Robert Hart.

The Japanese Imperial Household Department, says the *Kobe Chronicle*, presented a pair of silver incense burners as a token of respect to the Korean Imperial House on the occasion of the recent obsequies of the late Queen of Korea.

Captain Chichester, officers, and Ship's company of H.M.S. *Immortalité*, entertained the residents of Nagasaki at a very enjoyable smoking concert on the board their ship on November 25th. The celebration of the anniversary of the second year of the commission of the vessel was the occasion for the concert.

Mr. Wilkinson heads the Kobe batting averages, with Mr. W. D. S. Edwards second. Wilkinson had 6 innings, made 237 runs, had a top score of 101, with 2 not outs = 59.25. Edwards had 5 innings, made 166 runs, had a top score of 78, one not out = 41.50. G. Braess was the best bowler—510 balls, 26 maidens, 263 runs, 44 wickets, = 5.98. Townend comes next with an average of 6.23.

"Is Great Britain drifting into conscription?" is a question that might well be prompted by the recent trend of military politics at Home, remarks the *China Mail*. Speaking to his constituents at Faires a month ago, Sir R. B. Furlay, Solicitor-General, stated that it would be necessary to largely increase the expenditure on the British Army and Navy, and it was also probable that resort would have to be had to the ballot to select citizens to serve in the militia.

Bishop Awdry, the new Bishop of South Tokyo, in succession to the late Bishop Bickersteth, took a first-class at Balliol College, Oxford, and was also Ellerton Theological Prize-man. He has been successively Fellow and Lecturer of Queen's College, Oxford; second master at Winchester College (where he was educated); headmaster of St. John's College, Hurstpierpoint; and principal of Chichester College. He was Suffragan Bishop of Southampton until he accepted the Bishopric of Osaka.

A new steamship, the *Cymric*, for the Liverpool and New York service of the White Star Line, was successfully launched recently from the yard of Messrs. Harland & Wolff, Belfast. This vessel, whose gross tonnage is 12,300 tons and displacement 23,000 tons, is the thirty-sixth vessel constructed by the same builders for the White Star Line, and by far the largest cargo-carrying steamer in the world. Her dimensions are:—Length, 600ft.; breadth, 64ft.; depth, 42ft.

It is stated that before the King of Siam left England he wrote to her Majesty, in reply to a letter previously received from Balmoral, assuring her that the memory of the hospitality which had been accorded to him in England would ever be treasured by him. It was, perhaps, beyond the bounds of probability that he would

ever be accorded the opportunity of reciprocating her Majesty's personal kindness by extending to her a welcome in his own kingdom; but he assured the Queen that, should any members of her house visit Siam, they would find its King proud to be their host.

Mrs. Eliza Saunders, the mother of the two young lady missionaries who were massacred about two years ago in Fuhkien, China, is herself shortly to proceed to China on mission work, under the auspices of the Dublin Missionary Association. Mrs. Saunders is a Melbourne lady.

The Hottentots in German South Africa have been severely punished by German colonial troops for robberies committed upon British soil. It is said that extreme poverty caused the natives to attack their neighbours, for, as every where in South Africa, the cattle there have succumbed to the dreaded rinderpest. By way of illustration, it is stated that one farmer in Namaqualand lost 388 head out of 400. Another has only 5 left out of 280. The rich chieftain, Lapalia, has lost over 2,000.

Some months ago, the German public was surprised to hear that the whole of the artillery had been quietly provided with new guns. Now a similar surprise is impending with regard to the arms of the infantry. It is understood that the experiment made with the new six-millimetre rifle, model 1896, has given the most excellent results, and the new weapon is said to surpass those of all other States. Its introduction will most probably take place before long, and it is confidently believed that the German army will again have the start of all Powers in the question of armament.

Captain Cubitt, Master of the P. & O. *Formosa*, made the following report to H.B.M. Consulate on his arrival at Kobe on Thursday from Yokohama:—At 7 a.m. this day, about six miles W.S.W. of Simo-Misaki Lighthouse, observed a Japanese cutter-rigged craft of about 70 tons lying water-logged right in the track of shipping. Stopped alongside her for twenty minutes and had a complete view of her deck and hatchway; but saw no sign of life. She appeared to have been recently abandoned. The distress signal, "N.C.," had apparently been flying, but was hauled down close to the deck. One water-logged boat was attached to her.—*Higo News*.

In the U.S. Consular Court at Kobe, on the 29th inst., before Mr. S. S. Lyon, Consul and Judge, William Mathews and J. W. Drew, seamen on the ship *Commodore J. H. Allen*, were charged with assault and battery and resisting arrest on the 23rd inst., also with inflicting wounds upon Inspector Sakamoto, of the Kobe Police Station, during the assault. Both men, we learn from the *Kobe Herald*, pleaded guilty, and his Honour, after examining the witnesses for the prosecution, sentenced them to 60 days' imprisonment, and at the end of that period to be shipped on an American vessel if there should be one in port at that time. If there is not, the sentence is to be extended for 30 days or until such an opportunity occurs.

The *Kobe Chronicle*, writing on Monday said:—The many friends of Captain H. F. Sommer, who for many years has been in the service of the China Mutual Steamship Company, will regret to learn that the illness from which he has recently been suffering terminated fatally yesterday. It will be remembered that when the *Oopack* was here about two months ago, Captain Sommer had a paralytic stroke and was taken to the International Hospital. He was found also to be suffering from Bright's disease and other complications, we believe, and death resulted yesterday. Captain Sommer was married, and the sympathy of the deceased's many friends will be extended to his widow in England.

Mr. Robert Bowles, in the "British Journal of Dermatology," concludes that blindness and sunburn caused by snow are due to violet or ultra-violet rays of solar light reflected by the

snow. Sunstroke is also caused by these rays. Electric lights rich in violet rays, such as the arc light, produce similar effects. Mr. Maunde has pointed out that sunlight produces fevers in India, which, however, may be prevented by wearing double clothing and a head-gear of orange yellow stuff. Just as gold leaf is a protection against the burning action of Röntgen rays, some pigments, especially those containing red and yellow, arrest or alter the violet rays reflected from snow. Apparently the gaudy yellow and red turbans of negroes and Orientals have not been adopted for mere show.

Although it has frequently been stated that Mary Anderson, now Mrs. de Navarro, permanently quitted the stage when she married, she still sings for charity at concerts given at her village home situated in one of the most beautiful spots in England. To all appearances she leads an ideally happy life, she and her husband entertaining all the members of the artistic world who are personally worth knowing. This year Mr. Navarro organized a cricket match with art on one side and literature on the other. On the side of literature were Conan Doyle, Anthony Hope and others, and on art's side appeared Plunkett, Greene, Mr. Herkomer, a young American artist, and others to make up the eleven.

The imports of raw silk at the ports of New York and San Francisco, up to October, 1897, included:—

	Bales.	Lbs.	\$ Value.
New York	1,132	249,308	800,017
San Francisco	3,932	515,970	1,560,458

Total..... 5,071 765,278 2,360,475

The imports of Waste in the same period were:—

New York	705	215,700	68,263
San Francisco	300	3,500	875

Total..... 1,005 319,300 69,131

The imports of Japanese piece goods and handkerchiefs from July 1st to October 5th, 1897, were silk piece goods, 14,916 piculs; handkerchiefs, 98,395 dozen.

Mr. T. Ryding Green appeared in H.B.M.'s Court on Tuesday morning, before the Assistant Judge, Mr. Jas. Troup, on a summons taken out by Wing Hing Loong, a Chinaman, who sued for the recovery of \$40 alleged to be due for two months' rent of a house on No. 121 Settlement. Plaintiff stated that defendant had occupied the house from the 20th October, and had agreed to pay in advance, but had paid nothing. He claimed for two months' rent, from Oct. 20th to Dec. 20th. He had no agreement in writing for payment in advance. Defendant, who appeared to be very ill and feeble, and quite unfit to appear in Court, said he had made no arrangement to pay his rent in advance. He acknowledged the debt of one month's rent, but had been laid up ill in bed with pleurisy since the 14th, otherwise he would have paid it. As soon as he was able to get about he would be able to settle with the plaintiff, who had acted towards him like a regular Shylock. His Honour adjourned the case for one week to given an opportunity to defendant to settle with his creditor.

From conversation with one of the foreign military attachés who witnessed the manoeuvres in Kyushu, the *Kobe Chronicle* learns that the foreign officers present formed a very high opinion of the troops which took part in the operations, particularly of the infantry. The discipline of the men was excellent; there was no hurry or disorder, no disorganisation either in advance or retreat, but the various movements were conducted with a skill reflecting great credit on the officers and all concerned. The courtesy extended to the foreign officers was, as is customary with the Japanese on such occasions, all that could be desired; everything was done to make them comfortable, and they were given every opportunity of witnessing the evolutions and understanding the plan of attack and defence. It appears to be the general opinion of the officers that though Marquis

Yamagata was doubtless justified in his criticism of the cavalry, the discipline and organisation of the Japanese infantry would do credit to any troops in the world.

To-night the Scotsmen of Yokohama—a more loyal and hospitable band can not be found anywhere—celebrate their Patron saint's anniversary with a ball at the Public Hall. Everything promises a most enjoyable evening. From the *China Mail* we learn that a pleasing feature at the St. Andrew's Ball in Hongkong will be the music played to the last item on the programme, viz.:—Waltz and Galop. Mr. Bentley, the popular Bandmaster of the West Yorks, has completed, and dedicated to the President and Members of Hongkong St. Andrew's Society, a Waltz to be henceforth known as "Auld Lang Syne." Considering that this may be the last Hongkong St. Andrew's Ball at which H.E. The Governor, and also the West Yorks will attend, the intention is to play the Waltz, then break into the Galop as usual, and then the whole Company will sing "Auld Lang Syne" in slow time. The Waltz contains the following airs:—"Auld Lang Syne," "Auld Robin Gray," "Scots wha hae," the Galop,—"Auld Lang Syne," "Keel Row" and "Merrily danced the Quaker's wife."

Hongkong has been trying to explain away her defeats in the recent colonial Interport Matches—more particularly at cricket. "Ionic" in the *China Mail* drops into verse in attempting the matter, and we give his last three stanzas:—
But we've grown here too ultra exclusive and cricket goes down before class,
(Even Ranji would find himself out in the cold in a set where he scarcely could pass.)
For cricket no more levels all things—the Upper Dockyard only play:
And people who're not in the Dockyard, are told to get out of the way.

In the Straits, the pavilion's a platform where all ranks and all classes meet—
In Hongkong the pavilion is taboo to all who've to earn what they eat.
Hence it is that the Straits beat us badly, and hence Rudyard Kipling is wrong,
For he'll note the distinction of breed and of birth should he ever turn up in Hongkong.

Well, let be, to the Straits, God bless them, though they've beaten us all round the place,
And most will assert that defeat such as ours can not be decreed a disgrace,
But I say, and I stick to it roundly, and this is the gist of my song,
That if class had been put on one side for the nonce 't would have much better been for Hongkong.

We learn from the *New York Shipping Register* that a reception was tendered on the 21st Oct., by the Board of Underwriters at their room 51 Wall-street, to Capt. E. D. P. Nickels, of the ship *May Flint*, who, as reported by us before, brought his vessel safely into port, under very trying circumstances. The *May Flint*, from Philadelphia Aug. 22 for Hiogo, encountered a cyclone on Sept. 8, when about 400 miles off the Azores. She was severely damaged, but Capt. Nickels with rare judgement and courage brought her back to New York. Mr. A. A. Raven, President of the Atlantic Mutual Insurance Co., and the Board of Underwriters, in a neat speech, congratulated Capt. Nickels for the bravery and ability shown on this perilous voyage, assured him of the appreciation of his services by the Board of Underwriters, and presented him with a beautiful gold watch and chain. The captain thanked Mr. Raven, and remarked, that he had done nothing but his duty. After a short speech by Mr. W. A. Walker, of Walker & Hughes, referring to the excellent work done by the captain and to the captain himself as a man of deeds and not of words, the meeting adjourned.

The Rt. Hon. Mr. Joseph Chamberlain was installed as Rector of Glasgow University on November 4th. His rectorial address was devoted to patriotism. He condemned the representatives of universal philanthropy who clutched at every accusation of perfidy and cruelty against those that risked life and reputation in the British service, and said he was convinced that the nation would maintain, com-

plete and splendid, the edifice of British greatness. Subsequently at luncheon he remarked that our relations with South Africa were more satisfactory than they had been for many a day, and he believed really that a United Empire was becoming a question of practical politics.

Kobe seems to have out-done Yokohama in one feature of its St. Andrew's Ball—it had pipers. Mr. Gordon Browne headed the procession and introduced a country dance called "The Flowers of Edinburgh." Kilted dancers were present in great number.

The crew of the Siamese barque *Charon Wattana*, recently wrecked at the mouth of the Yangtze, were shipped to Hongkong on Nov. 23rd. By the wreck of the *Charon Wattana*, Siam, so far as sailing vessels are concerned, disappears from Lloyd's Register.

L'Avenir du Tonkin calls attention, says the *China Mail*, to the excessively high death-rate amongst the European civil servants in Tonkin and Annam. Out of a personnel of 706 functionaries, there have been 21 deaths this year—one due to suicide and one to an accident. The mortality has been heaviest amongst the officers engaged in the Telegraph Service on the Upper Mekong.

Thus the *Sydney Morning Herald* of the 9th Oct.—"Miss Vivienne Dagmar and her husband, Mr. Willis, both members of the ill-starred Adair Company, sailed for India by the *Armand Behic* on Thursday. The home of these artists is in Calcutta, and that they were able to return was due to the friendly exertions of the recent matinee committee, with the added assistance of Mr. Todd, who collected a considerable sum on their behalf." Yet Miss Elsie Adair told Hongkong people that her Australian trip was a huge success.

A Toronto telegram, which appears in American papers under date Oct. 27, says:—The World's Woman's Christian Temperance Union Convention ended with a meeting of the executive committee this morning, Miss Willard presiding. The dissentient voices in the organizations were dropped. The first business was the appointment of several round-the-world missionaries. Miss Jessie Ackerman and Mrs. Hellen Bullock of the United States and Miss Vincent and Miss Cummings of Australia were selected to fill such positions. Miss Shafer and Miss Ericsson were appointed European missionaries, all under the direction of the world's general officers. The resignations of Miss Kate Bushnell and Mrs. Bushnell and Mrs. Kate Andrews, three round-the-world missionaries, who were bitter opponents of the attitude of Lady Henry Somerset on the contagious-diseases question, were sent in. They were forthwith accepted. The world's banner for the largest increase in membership went to Japan; Miss Tomo Inouye will take it home. Requests for missionaries from Syria, Spain, Italy and Mexico were left in the hands of the general officers to be filled at the first opportunity. The twenty-fifth anniversary of the Woman's Christian Temperance Union will be commemorated in 1898.

The Scottish Oriental steamer *Taichow*, which arrived in Hongkong on November 22nd, reports that the day before, at six o'clock, a junk flying distress signals was sighted 100 miles south of the port. A boat was sent away in charge of the chief officer, Mr. Martin, and the occupants of the junk, consisting of 7 men, 3 women, 4 girls, and 1 boy, were rescued. The master of the junk stated he left Macao on 26th October, and on the 17th Nov. bad weather was encountered, the vessel losing her rudder, spars and sails, and leaking badly. The crew had been without food or water for five days, and were in a wretched condition when rescued. The junk's crew, with an inhumanity one could scarcely believe possible, wished to leave behind a half-dead crone, said to be 90 years of age. Mr. Martin, however, in spite of the difficulties under which the rescue was effected, refused to desert the poor woman, and she was ultimately

rescued from the junk and taken on board the *Taichow*, where Capt. Primrose and his crew attended to the wants of the shipwrecked people. There was a strong northerly wind blowing and a high sea running, so that the position of the junk and her human freight was perilous in the extreme. Capt. Primrose is of opinion that the junk sank some 12 hours later, basing his opinion on the statements of the junk's crew of the rate at which the water gained upon them. Otherwise she would be a danger to navigation. She was abandoned in lat. 21 degrees N., long. 113 degrees E.—*China Mail*.

In H.B.M.'s Court for Japan, on Tuesday morning, E. A. Simmons, a coloured seaman belonging to the Japanese steamer *Tai-chu Maru*, was brought up before Jas. Troup, Esq., Assistant-Judge, on a charge of being drunk and creating a disturbance on board the vessel, in Yokohama harbour on the 29th Nov. Accused admitted having been intoxicated and professed to know nothing of what had taken place. Evidence given by Watanuki Kitaro, a constable in the Water Police, and George MacFarlane, third officer of the *Tai-chu Maru* showed that on Monday afternoon, the accused, whilst in a state of intoxication, assaulted the man in charge of the winch, while cargo was being worked, and created a great disturbance on board. He was seized by the second and third officers and shut up in a room, but broke the panels of the door and got loose again, eventually having to be put in irons and the police sent for. He used the most offensive and threatening language to the officers and caused a great deal of trouble. Captain Gope, the master of the *Tai-chu Maru*, explained to the Court that the vessel had been brought out for the Osaka Shosen Kaisha and would be transferred to that company when they arrived at Kobe, after discharging their cargo for Yokohama. The crew, mostly consisting of coloured men, would be discharged at Kobe and arrangements had been entered into to send them home. The men had been mutinous and given a great deal of trouble on the voyage out. His Honour sentenced accused to five days imprisonment with hard labour, or to be put on board his ship should she leave before the expiration of the term, and to pay the costs of the case.

Baron von der Goltz has an interesting article in the *Deutschen Rundschau*, Berlin, entitled the "Strength and weakness of the Turkish empire." The Turkish army was reorganized by General Goltz a few years ago and the effect of his work is clearly demonstrated by the result of the late war with Greece. Perhaps no foreigner is better acquainted with the real situation in Turkey than this German officer. In his article he says the strength of Turkey is still to be found in the natural qualities of her remarkable race. The men are brave, content, modest, and obedient. From the beginning, and during all the various epochs of Turkish conquests their appreciation of mutual interests has always been a characteristic feature and is still very noticeable of the people. The great loss of territory during the past two centuries is no positive proof of degeneracy or absolute weakness. The weakness of Turkey lies by no means in this, but rather in the fact that she still has more land than she is able to hold with the power at her command. She has only one people, in number about as large as the people of South Germany, from whom to draw her soldiers, and with this limited number she occupies as much territory as Germany, France and Spain put together, while she has to guard against strong and dangerous neighbours at her borders. Her military strength has not decreased numerically. Another element of weakness is her present system of government. The introduction of railways and other modern improvements would greatly improve the situation, and if the government were constituted on different lines this could be done without serious opposition from Mahomedan fanatics.

WORKSHOP REGULATIONS.

The *Keisai Zasshi* publishes a draft of a bill for labour regulations to be presented in the next session of the Diet, which we translate as follows:—

Art. I.—These Regulations are to be applied to workshops or factories where more than 50 artisans or apprentices are employed for working machines propelled by hydraulic power, steam, electricity or wind.

Art. II.—Institutions other than those prescribed in the foregoing article shall be placed under special restrictions by the issue of an Imperial Ordinance, provided that the same are considered dangerous in nature or injurious to health.

Art. III.—Youths under the age of ten are not to be employed in any factory or workshop.

Art. IV.—Youths below fourteen years of age shall not be allowed to work for more than 10 hours a day.

Note.—In factories where night work is undertaken, 8 hours shall be the limit for work during the day.

Art. V.—Workmen shall be granted more than an hour of rest during the day, and more than two days within one month, three national holidays being strictly observed.

Art. VII.—The employer is under obligation to provide means of education for work-people below fourteen years of age.

Art. XIII.—In case of the injury, illness, or death of artisans in the course of their duties, a proper amount of remuneration or compensation must be made to the artisans themselves or their families.

Art. IX.—A working contract may be annulled by either party at any time after the expiration of one year, or, in the case of apprentices, after three years, provided that notice of the annulment be given 15 days previously.

Art. X.—Workmen are entitled to have their contracts dissolved in any of the following cases:—

1. When they have been required to suspend work for more than two weeks for the convenience of the employer.

2. When acts of violence or obscenity have been committed upon workmen or members of their family by the employer, overseer, or members of their families.

3. When they are forced to engage in work calculated to risk their lives or to impair their health.

4. When wages are not paid or work is not provided for them in due time.

Art. XI.—Any employer who knowingly secures the services of another's artisan is responsible for payment of damages incurred by the injured party.

Art. XII.—Any person receiving a labourer for apprenticeship shall strictly conform to the regulations specially established for the purpose, and obtain the local Governor's sanction.

Art. XIV.—In every factory or workshop suitable arrangements shall be made for protection against accidents and for preserving health.

In case it is deemed that danger is imminent to adjoining houses, or public interests are impaired, by a factory or workshop, the local Governor may issue orders for protective measures to be taken or for the suspension of work wholly or in part.

If the proprietor of a factory or workshop fails to make such arrangements, the work shall be undertaken by the local Governor and the proprietor in question shall be required to pay all the expenses incurred in connection therewith.

Art. XV.—Overseers may impose restrictions or alteration of work if it is considered to be of a dangerous nature, or injurious to health or public morality.

CORRESPONDENCE.

"THE SOCIAL EVIL" ETC.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Kindly permit me a few words on the above subject from my point of view. But before I give my views, I may be allowed to say concerning Colonel Bacon's remarks on the subject that I was with him when he visited the prostitute quarters of Nagoya, Osaka, Kyoto and the Yoshiwara, and that I heard his speeches also. He was not making comparisons between countries; because other countries are filthy is no reason that Japan should be filthy. Japan is below the ideal. As to the number of prostitutes in Japan, has the Editor of the *Japan Mail* ever read, "How is the Social Evil regulated in Japan"? The author

seems to have studied the question. He calculates the regular licensed prostitutes at 500,000, and adds to this, at least a million *daruma* and *mushimori*, and 500,000 *geisha*, making a total of about 2,000,000, or 10 % of the female population of all ages of the entire country. I do not know about the quantity in other countries but if the above doesn't fill one with horror, nothing will. The shameless exhibitions in the Yoshiwara and at Nagoya, are things that almost petrified me when I first saw them a few weeks since. The quality in Japan is bad. Now my impeachment is not that of the *unfortunates* themselves, nor of the country that produces them, but of the conditions that make this awful evil possible. Perhaps Mr. Editor thinks Japan the best country in the world on this question. Be it the best or the worst, it is bad. The question is not one entirely of lust nor of race, but has a financial element in it that is well worth considering. One kind of regulation may be better than another but can not it be blotted out? The parties concerned are 1, the parents, 2, the girl, 3, the brothel keeper, 4, the patrons 5, the public. Why do parents sell a daughter? Because they have to do so in order to live. Why does the girl go to a brothel? Because there is more money in it than in any other employment. Why is a man willing to keep such a place, when it gives him such a low standing? He has hard work to make money in other ways. Why do men patronize such places? Well, the places are there and invite them, they are authorized and no great stigma is attached to going, etc.; but the difficulties that confront thousands of young men who would gladly bear the responsibility of families, prevent them, they become disgusted with the world and desperate and run into vice. The revenue derived from the tax is a balm to the public, or government, conscience on the matter. Till the financial question is settled right, the evil will be apt to continue growing rather worse than better as conditions become harder with the awful downward competition in life. Certainly we must solve the problem, how can we live before we can solve the problem how can we live decently? We must solve this problem abstractly before we can concretely. As a social question it does not belong entirely to the Japanese but to all of us. Let us not wrap ourselves in the *ermine* of purity and let on it is no concern of ours, as much as to say "we are pure, be like us." We must help solve the problem of keeping the people alive. My solution is this:—Give the people their land rights, then they can sustain life easily, then the parents will not send their daughters; the brothel-keepers will go into other businesses, the patrons will not patronize them, and the public will not be troubled with the question. But alas! The missionaries are not in politics, and can't say anything about men's right to land, the business men are not in religion or politics, and pay no attention to the subject, the politician pays but little attention because he is all in politics and doesn't mix in religious subjects, the editors come in just enough to make their papers sell and so the wickedness goes on. The solution of the problem must take account of all the factors—one is the money factor.

Yours etc.,
CHAS. E. GARST.
(The figures quoted by our correspondent are monstrously absurd. The *geisha* of Tokyo do not total two thousand. Where are the remaining four hundred and ninety-eight thousand to be found?—Ed. J.M.)

THE CONCERT AT THE CENTRAL TABERNACLE

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I do not know whether the projectors of the concert held at the Central Tabernacle on Saturday night would like to see any untoward incident that occurred at it publicly noticed in a newspaper. But I am sure that no sensible Japanese present at the concert will hesitate to express his sincere sympathy for the distressed lady who acted on the night as ticket-receiver, trying in vain to persuade her alarmed friends and visitors that nothing extraordinary was happening,—a lady, European, but, it deserves mentioning quite Japanese, as far as her mastery of our language goes. Neither can he forbear feeling infinitely *kinodoku* for a portion of the European audience who were literally frightened out of the hall by the loud yellings uttered by the boys in the galleries at the first pathetic sentence recited by the *Biwa* player. And the fear, shared by many present at the scene, that similar experiences repeated might convey a very mistaken notion of Japanese sense of music, makes it but incumbent upon any one who can to say a word in explanation of the affair. Every one knows, as no doubt do the Japanese gentlemen directly concerned in the project, that the wording of all *biwa* songs is highly excitable, especially

with sensitive Japanese boys, but also that these boys, even while crying themselves hoarse at every pitch of the player's voice, are conscious that they are prompted by pure love of drollery. If they pay their small admission, it is not for music, for which they have no appreciative ears, but for the hoisterous account they find for themselves in the *biwa* performance. Their manner is anything but decent and ought to be cudgelled, but that is a question apart. The wonder is why the Japanese section of the projectors had allowed the *biwa* to be included in the programme of a concert essentially polite in purpose. As matters stand, the *biwa* is avowedly the music of *satsuma* (not *Satsuma*, please mind) men, as the *koto* is that of the polite Japanese, and a Tokyo paper's synonym for *satsuma* is barbarism. Ask an intelligent Japanese what is his opinion of the *Satsuma Biwa*, and he will answer that it is no music but a relic of the feudalism such as flourished in the dominion of Lord Shimazu. It must be observed, therefore, that a concert that appeals to the purses of *shosets* whose nomenclature of musical instruments begins with the *Satsuma Biwa*, is, to say the least, a very low-toned concern and practically intercepts the patronage of the gentler Japanese.

Yours respectfully,

TEMPLE.

Tokyo, November 28th, 1897.

(The *Satsuma-biwa* is to the Japanese pretty much what the harp was to the Welsh of old. The songs sung to it are full of passionate patriotism, and we have ourselves experienced emotion in listening to them. We do not think that the term "barbarous" is applicable in any sense to the *biwa*. It may be called the "music-hall" instrument of Japan, and many of the popular ditties shouted by music-hall audiences in London belong to a lower range of sentiment than the compositions for the *biwa*. But the concert on Saturday seems to have approximated to a bear-garden at one time. The disappointment of the students when there seemed to be a chance of their being deprived of the promised *biwa* performance made them vociferously intolerant of everything that appeared to stop the way. A little more of that kind of thing would effectually deter foreigners from lending their assistance at concerts for Japanese.—Ed. J.M.)

BRITISH CONSULAR REPORT FOR HYOGO AND OSAKA.

In his report on the trade of Osaka and Hyogo for the year 1896, Mr. Hall, Her Majesty's Consul at Kobe, writes:—

The trade of this port in 1896 continued to increase at its usual rapid rate, as a comparison with the previous year shows.

	1896.	1895.
Imports	£ 9,461,263	£ 6,180,250
Exports	4,434,594	4,219,333

Total

£13,895,857 £10,399,583
Difference about £3,500,000 sterling, being an advance almost exclusively in imports of over 33 per cent. Ten years ago, in 1887, the total trade of Yokohama was under £61,000,000, and last year it had grown to somewhat over double that amount, about £135,000,000, whereas the trade of this port, which, in 1887, was under £27,000,000, had grown in last year to more than four and a-half times that amount, about £123,000,000. It seems pretty clear, then, that this port is fast catching up to Yokohama in the volume of its trade, and is bound, unless some totally unforeseen change occurs, to become before long the leading port of Japan. In fact, Kobe has already definitely outstripped Yokohama as regards imports. Ten years ago the imports into Yokohama were double those of Kobe; five years ago they were hardly more than equal; for the last four years Kobe has kept steadily ahead. It is only in exports that Yokohama excels Kobe, and as half the export trade of Yokohama consists of raw silk, hardly any of which goes to England, it is obvious that, as regards the interests of British manufactures, this port is the most important in Japan.

Kobe is, in fact, the third in importance amongst the ports of Eastern Asia. Shanghai is, of course, by a long way first, Yokohama comes second, Kobe a close third, being, as regards trade, shipping, and foreign population, considerably ahead of such ports in China as Tientsin, Canton, Hankow, Fenchow, or Amoy. From having been, as regards trade and importance, an intermediate port, Kobe has now definitely taken its place as one of the three leading emporia of the Far East.

TRADE SURVEY.—During the first half of the year trade was brisk, during the latter half, owing mainly to excessive rains and agricultural disasters from floods throughout the country, trade was nearly stagnant. A sure sign of dullness in trade in Japan is an increase in the number of applications for surveys of goods alleged to be not equal to sample, and there were twenty-seven such applications made to this Consulate last year, mostly in the latter half, as against a previous yearly average of less than a third of that number. When the Japanese merchant finds that the goods he has

ordered through a foreign merchant resident here will arrive on a falling market, he becomes very exacting as regards perfect correspondence between the goods and the sample, attaching great importance even to a minute variation in the shade of a colour. He therefore objects to take delivery of the goods unless an abatement is made in the price on account of the alleged inferiority to sample. The foreign merchant is consequently obliged to apply to the Consulate of the home manufacturer's nationality for a survey by experts in that line of goods, with the general result that the manufacturer has to stand the loss of the abatement allowed, as well as of the surveyor's fees. Annoying as this practice must necessarily be at times to the home manufacturer, it is obvious that the cure for it is not to be sought in the direction of dealing at first hand with the Japanese import merchant.

TEXTILES.—By far the largest increase has been in the textile fabrics, especially cottons. In 1896 cotton manufactures, inclusive of yarn, were imported to the amount of over £1,000,000 sterling, as against less than £700,000 worth the year before. Moreover, this increase in the manufactured article was coincident with a still larger increase in the import of raw cotton, of which about 86,000 tons were taken, value close on £3,000,000 sterling, as against £2,000,000 sterling worth, 75,000 tons, the previous year. Five years ago—i.e., in 1891—the cotton manufactures were under £700,000 in value, whilst the import of raw cotton had risen to over £1,100,000 sterling. This rapid development of manufacturing energy in this country was mainly owing to the stimulus of cheap silver, now enhanced by the abolition of export duty. Now that Japan has, in the course of the present year, shifted the basis of her currency, in the hope of permanently securing the enormous advantage thus undesignedly bestowed on her by the monometallic legislation of the West, it may be confidently predicted that if silver continues to fall below the par of exchange, 1 to 32, which Japan has fixed, the advantage she has hitherto enjoyed will pass to other silver-using countries, such as China and India. The improvement was very marked in yarns of the higher and costlier counts—twofolds and gassed—and that in spite of the fact that the imports from Bombay have rapidly dwindled away. It is worth noting, too, that American cotton, raw, is in growing demand, the long stapled variety being indispensable for the better grades of yarn. The value of this American import was about £360,000, nearly double that of the previous year.

WOOLLENS.—In woollen textiles the increase has been even greater proportionally than in cottons, £865,000 worth having been imported last year, as against £443,000 the year preceding, an increase of about 90 per cent., principally in the leading woollen staple, mouseline de laine. But there was much over-speculation in this article, for the statistics of consumption show a bare increase of 6 per cent., whilst the increase of importation was 70 per cent. The import of wool was over 1,300,000 lbs., value £26,000, as against 867,000 lbs., value £12,000, in 1895.

METALS.—Iron and steel manufactures were imported to the value of just £750,000 sterling, as against £588,000 worth in 1895, an increase of over 21 per cent. Fully half this increase is due to rails, of which over 20,000 tons, value £90,000, were taken, being more than double of the figures of the preceding year. It is in fact worth specially noting that for the first time rails made in America were imported to Japan during last year, the value thereof being about £37,000. In bar and plate iron increased imports of some 12 and 23 per cent. respectively are shown. The increase in plates is due to the demand for mild steel plates for ship, bridge, and boiler building. Of pig-iron there was an import of nearly 54,000 tons, as against 38,000 tons the year previous. This staple has hitherto been imported entirely from England, but there are indications that the United States is preparing to cut in as a competitor. The steady increase in wire nails must be placed entirely to the credit of the American article, German nails showing a falling-off as compared with 1895. Of galvanised sheet-iron the import was almost treble that of the previous year, the increase amounting to about £10,000. Very large quantities were required by the Government, particularly for Formosa. In the metal trade of this port England takes a close place, Belgium being first, and Germany second.

Of SUGAR nearly 44,000 tons, value £518,060, came in, as against over 44,000 tons, value £455,000, in 1895. There was thus an advance of nearly 19 per cent. in value upon a decrease of 2 per cent. in quantity. The decrease took place in white sugar, and the movement was concurrent with an advance in the import of beet sugars from Germany, of which some 6,400 tons

were sold at prices averaging about £12 per ton.

The total export trade shows an increase of only 5 per cent.

RICE.—The largest in value of the exports from this port last year was rice, to the amount of over £500,000 sterling. Notwithstanding the high rank of Japanese rice—second only to that of South Carolina—and the unrivalled skill of the Japanese cultivator in growing it, the export increases but slowly. All the rice that leaves the country goes from two places, this port and Bakan (otherwise better known as Shimonoseki).

The raw or unhulled rice is valued at £8 per ton, the polished at £10. The comparative export for the past four years is as follows:—1893, 67,583 tons; 1894, 117,918 tons; 1895, 84,052 tons; 1896, 84,200 tons. Every ton of this is for culinary use, none being employed for manufacturing, starch, &c., as is the case with the tropical rice exported from Saigon, Siam, and Burmah. The export is not likely to increase very much, the increase of the farming population being steadily drawn away from the land by the attraction of higher wages obtainable in the nascent manufacturing industries, or by emigration. The area under rice cultivation, therefore, increases but slowly, keeping pace with the requirements of home consumption. Three-fourths of the exports go to Europe, the remaining fourth being nearly equally divided between Australia and America.

MATCHES.—The second place in the list of staple exports is taken by matches, of which 17,654,000 boxes, value £531,000, were exported, an increase of about 14 per cent. on the preceding year. The market for these is virtually the whole of Eastern Asia, where the far superior but higher priced foreign article is driven out of competition. An attempt has been made to introduce Japanese made matches into American markets, but it is a field in which the parsimonious consideration which sway Asiatic populations have little or no place.

COTTON YARNS.—The third place in the list of exports was taken last year by Japanese cotton yarns. I append the values of this new staple export for the last four years:—1893, £516; 1894, £73,600; 1895, £81,116; 1896, £332,420. Other cotton manufactures, piece goods, flannels, and crapes, were exported to the value of £176,000, and putting these along with the yarns, the total, £508,030 gives to cotton manufactures a close third place in the list of the staple exports of the port.

Next comes MATTING, of which only £322,000 worth were exported as against £374,000 the previous year. Nearly all of this goes to the United States, and the falling-off is due entirely to the manufacture. Neither as producer nor consumer is British trade much concerned with this commodity, but the cognate manufacture of carpet, hemp, and cotton is deserving of some notice, notwithstanding that the export of these likewise shows a slight decrease, the number exported being about 660,000 pieces, value about £150,000, for each of the last two years. The seat of this industry is the town of Sa'kai, about eight miles south of Osaka. The rugs are made principally of jute. There are 2,400 looms to each house, and each loom is attended by four persons. The warps of the rugs are of cotton, but the welt is thick jute yarn, and the filling thin jute yarn. The designs are mostly Turkish and Persian (imitated), very few of the old flower (Japanese) designs being now made. The price ranges from 2d. to 4d. per square foot, according to the quantity of material used. When the weavers are fully employed in filling orders, they can turn out 4,800 square yards daily. The yarn used in this manufacture is principally imported from Calcutta.

WOOL RUGS.—In the course of last year the Sa'kai weavers have made a step forward by turning their attention to the manufacturing of wool rugs, and they are now able to turn out a very creditable article, which in appearance and durability, is almost equal to a Turkish carpet. The warps and welt are cotton, the filling wool yarn, and the prices range from 6d. to 1s. per square foot. Most of the wool yarn is manufactured from Chinese raw wool spun in Osaka. An important improvement in the rug business is the attention now paid to dyeing colours.

COPPER comes next to matting in value, the export in 1896 being over 7,000 tons, value £350,000, as against 6,600 tons, value £316,000 in 1895.

TEA.—The export of tea was 7,000 tons, value £240,000, a falling-off of over 30 per cent. from the previous year. Direct export of this staple by Japanese merchants is slowly increasing, amounting to nearly one-fifth of the total. Fully half the crop is brought into this market in the months of May and June, giving employment under the foreign merchants to over 10,000 Japanese in firing, sifting, sorting, and packing

the leaf. The fliers are principally women and children, earning about 4d. a day; the silters, sorters, and packers, men and women, earn about 8d. a day.

STRAW-BRAID continued to expand, the export amounting £130,000 worth, nearly double of the previous year; the higher grades have been in great demand for both the American and European markets.

CAMPOR, for which this port used to be the leading market of the world, fell off last year to under 1,000 tons, value £118,000, barely a third of the figures of seven years ago. The supply from Formosa was shipped to Hongkong, which is now likely to become the permanent depot for that island.

DISTRIBUTION OF TRADE.—It appears that half of the total imports are British, and of those more than half are from the mother country; Chinese come next, amounting to nearly a sixth; American next, nearly a tenth; German next, over a twelfth; French, about half the German. As compared with the figures of the preceding year imports from the United States show the largest increase, 86 per cent.; next come French imports, increase over 49 per cent.; next comes the British, increase, over 46 per cent.; then the German, nearly 40 per cent.

Only one-tenth of the exports goes to Great Britain, but almost four-tenths more goes to British dominions. China receives a fifth of the exports, the United States rather less than a fifth, leaving about a seventh for all other countries, the share of Korea being nearly equal to that of France and Germany combined.

Though the total increase in the export compared with 1895 was only 5 per cent., the fluctuations in the trade with the various countries were so considerable as to be well worth noting. The largest increase was in the exports to China, amounting to 68 per cent.; to Great Britain an increase of 22 per cent. The greatest decrease was in the exports to Germany, amounting to 58 per cent.; those to the United States fell off to the extent of 30 per cent.

SHIPPING shows an advance of nearly 7 per cent. in the number of ships, and nearly 13 per cent. in the tonnage. The most notable feature in the movements of shipping was the increase under the Japanese flag from 116 ships, 685,29 tons, in 1895, to 397 ships, 411,935 tons in 1896, due to the return of the transports to the commercial service consequent on the conclusion of the war with China, and the starting of new lines with the ships bought during the hostilities and since. The shipping under various foreign flags therefore shows a decrease, amounting in the case of British shipping to over 4 per cent.; of German shipping to over 30 per cent.; of French, under 4 per cent. On the other hand, American shipping advanced from 56,587 tons in 1895 to 77,159 tons in 1896, an increase of over 36 per cent. Notwithstanding this new Japanese departure, however, British shipping retains its wonted preponderance, being fully 60 per cent. of the total tonnage of the port, whilst Japanese is only one-third of the British.

FOREIGN POPULATION.—There are now well over 2,000 foreigners, including children, residing at this port, the Chinese furnishing more than half and the British more than a quarter. Next to the British, 515, come the Germans, 141, then the Americans, 126. In Osaka, where the foreigners number over 500, the Chinese furnish four-fifths, and there are 70 Americans as against 40 British, most missionaries. Of foreign firms there are in Hyogo 68 British, 28 German, 23 American, and 7 French, few of which have branches or even agencies in Osaka, as the tendency of business is to gravitate more and more towards this, the better seaport. Five-sixths of the business of the port passes through the hands of these foreign middlemen, to the mutual benefit of the Japanese buyer or exporter and the European or American manufacturer or importer. The Japanese Customs returns show a much larger proportion of so-called direct trade; but in many cases the foreigner finds it convenient to transact business in the name of a friendly Japanese firm, while retaining the substantial interest and the control of the documents in his own hands.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

ENGLAND AND FRANCE IN AFRICA.

London, Nov. 26.

Reuter has received a despatch from Lagos to the effect that a French expedition had arrived at Nikki, and that the

Governor of Dahomey had started for the hinterland with a considerable force.

Further news has been received from Uganda of a reassuring nature.

A rumour has reached the Colonial Office to the effect that a conflict has taken place between 400 British and a French force near Nikki, but it is officially discredited.

The rumour, contained in a recent Reuter's despatch from Lagos, of a conflict between British and French forces near Nikki, is unfounded.

GERMANY AND CHINA.

The statement that Prince Henry of Prussia will command a squadron of cruisers bound for China waters is confirmed. He will probably sail on the 10th of December.

It is reported that Russia has acquiesced in the occupation of Kiao-chow by Germany, providing that she is allowed a free hand in Korea.

The demands of Germany on China include the payment of a large indemnity, the erection of a cathedral, the punishment of officials, a railway monopoly in Shantung, and the cession of Kiao-chow as a coaling station.

China refuses to discuss the matter until Kiao-chow is evacuated.

CONFLICT IN THE AUSTRIAN REICHSRATH.

Indescribable scenes of violence have occurred in the Austrian Reichsrath, culminating in a quarter-of-an hour's hand-to-hand fight.

Thirteen deputies of the Austrian Reichsrath have been suspended. They were removed by the police, after storming the platform of the President, who fled during the tumult.

The Austrian Cabinet has resigned, and this afternoon Dr. Baron P. Gautsch, Minister of Public Instruction, has been charged with the formation of a new Ministry. Renewed demonstrations have occurred in front of the Reichsrath, and a force of Police and Hussars having charged the mob with drawn swords, many were wounded. The demonstrations ceased when the resignation of the Cabinet became known.

MORE TROUBLE FOR TURKEY.

The Albanians have revolted, and in the severe fighting with the Turkish forces that followed heavy losses were incurred by both sides.

MEETING OF PARLIAMENT.

The meeting of Parliament has been fixed for February 8th.

CRICKET IN AUSTRALIA.

London, Nov. 29.

Stoddart's eleven, playing a team of thirteen in Queensland, scored 636 in the first innings.

The Queensland thirteen made 316, with eight wickets down, when the game was drawn.

RUSSIA AND TURKEY.

Russia, supported by France, urges the Porte to commence the evacuation of Thessaly.

THE GERMAN NAVY.

London, Nov. 30.

The German Naval Bill has been published, and provides for the building of seven battleships and nine cruisers before the close of 1905, increasing the annual

expenditure by four million marks, but without any new taxation.

NEW RUSSIAN MINISTER TO CHINA.

London, December 1.

Mr. de Speyer, Russian Consul-General at Seoul, has been appointed Minister to Peking.

INDIA COUNCIL BILLS.

The total applications for India Council Bills amount to 1,233,000 pounds sterling. Tenders of £98 11s. 6d. receive about twenty per cent. above that in full, the average realised being £2 15s. 2d. discount.

NEW GOVERNOR OF HONGKONG.

Sir Henry Arthur Blake, K.C.M.G., Governor of Jamaica, has been appointed Governor of Hongkong.

HEAVY GALE AND LOSS OF LIFE.

A terrific gale has swept the British coasts, resulting in the loss of twelve vessels with all hands, besides thirty others being wrecked. The piers at Broadstairs and Sheerness have been destroyed.

(FROM TOWERS PAPERS.)

THE PARIS BUTCHERS STRIKE.

Paris, November 10.

The butchers' strike has terminated.

FRANCE AND ENGLAND IN AFRICA.

Lord Salisbury in a speech said that England aimed at freedom for trade on the Niger, the Nile, and the Zambesi, and that she would maintain her rights in her negotiations with the Powers.

Paris, November 11.

The French journals express themselves fairly well satisfied with Lord Salisbury's speech. They say the ideas developed by the speaker with respect to commercial freedom in Africa are those which have always been entertained by France.

ABOLITION OF SECRECY IN CRIMINAL PROSECUTIONS IN FRANCE.

Paris, November 13.

The Chamber has adopted the proposal for the abolition of secrecy in criminal proceedings. An advocate will assist at the preliminary examination.

TRAIN BLOWN UP BY CUBAN REBELS.

Paris, November 14.

The Cuban rebels have blown up a train with dynamite near Nuevitas. Twenty persons were killed and twenty-seven wounded.

THE DREYFUS CASE.

Paris, November 15.

Great excitement has been caused by the publication in the *Figaro* of an article stating that the report which M. Scheuer-Kestner has sent in to the Government shows that the acts charged against Captain Dreyfus continued after his condemnation and that some other officer must have been guilty. The papers call upon M. Scheuer-Kestner to state the name of this officer, as it is impossible to allow suspicion free play.

(FROM THE JAPANESE PAPERS.)

THE EXPORT OF RICE FROM KOREA.

Seoul, Nov. 29.

The regulations for prohibiting the export of rice will not be issued.

NO MORE BAD TEA FOR CANADA.

Kobe, Nov. 29.

According to a telegram from New York received by the Tea Exporting Company yesterday the Canadian Authorities have prohibited the import of low class tea, the same as the United States have done. If the report is true exporters will suffer greatly.

FATAL RAILWAY ACCIDENT.

Sapporo, Nov. 29.

To-day a man was accidentally run over and killed by a train at the Sapporo Station.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at 184, Creek side.

The Tokyo Chess Club holds its meetings at 3, Uchi-Saiwai-cho Ichome (next to the Tokyo Club).

PROBLEM No. 349.

By WILLIAM O'HARA.

(First Prize Belfast News Letter Tourney.)

White to mate in two moves.

GAME No. 349.

Lasker declares that the K B Gambit is unsound. He says: "The idea of the gambit, if it has any justification, can only be to allure Black into the too violent and hasty pursuit of his attack." The following game, known as "The Immortal Partie," is given by Lasker in his "Common Sense in Chess." He says that it is unsound in the highest degree, and yet of an exceptionally brilliant character.

- White—Anderssen. Black—Kieseritzky.

HONGKONG.

We learn from the *Hongkong Telegraph* that the Hongkong Chess Club will in future meet every Monday, Thursday and Friday afternoons, at the Public Library in Bank Buildings (No. 18), instead of the Grill Room as hitherto. The moribund chess clubs of the Japan ports will no longer be able to call us "Salamanders," remarks our contemporary. We don't know how the Kobe Club is progressing, but we can assure the *Telegraph* that the Y.C.C. is far from moribund now that new blood has come along "to stir the lees."

"Black Bishop" taunts us with depending too

much upon scissors and paste in filling our column, and extends his gentle commiserations. We return our grateful thanks. Of late we have done our best to remove such a slur—if it ever really existed—by giving as much local news as we could gather together. But Yokohama players are very devoted to their "ain firesides" in the cold, cheerless winter evenings and it is impossible for men who have their bread to earn to foregather of an afternoon as they do down south. Hence local topics are scarce and difficult to come by.

WOMEN'S CHESS TOURNAMENTS.

Mr. Buckley, chess editor of the *Birmingham Weekly Mercury*, writes on the recent Ladies' International Chess Tournament as follows:—We promised to tell our friends about the ladies' tourney, but last week we lacked the space. The Masonic Temple of the Hotel Cecil never looked so fairy like before. There at the ten tables sat the twenty competitors, all dressed in tasteful summer robes, many of them distractingly pretty, each and every one with some particular charm. It was like wandering in a garden of roses, and the humble representative of the *Mercury* for once felt like a thirteen-stone butterfly flitting from flower to flower. We name no names, dreading invidiousness, but we noted that the prettiest women, and not necessarily the strongest players, had the largest group of masculine lookers-on. One delightful creature, with a killing hat, and a complexion like a peach, was particularly favoured in this respect; and, truly, she was worth looking at, whether as a chessist or in any other character. Her calmness was exemplary, and the sweet way in which her fan undulated, while the clever brain thought out subtle combinations, was of itself sufficient to place the Ladies' Tournament among the classical events of chess. Presently the jewelled hand came forth with decision, and a knight swooped down on a pawn. The antagonist winced and said:—"O, how stupid of me!" from which it will be seen that the fair sex, like the unfair sex, are apt to attribute misfortune rather to their own oversight than to the superior strategy of their opponents. At another table a sweet creature played a move, and then, perceiving that the move would be disastrous, took it back with a caressing "Do you mind?" to which the other sweet creature replied:—"O, dear, no. Certainly not!" from which it would appear that some ladies are unable to see that agreeable laxities under such circumstances constitute a gross injustice to the other competitors. Taking the quality of the chess, by and large, as the sailors say, it was decidedly poor as compared with any masculine tournament whatever. Two or three of the competitors were tolerable players, and one or two really good—for ladies. But, as a whole, the games were not worth serious notice, which fact we regret to place on record. One feature of the contest was eloquent of the players' lack of experience and skill. It was the lengthy protracting of utterly hopeless games. What of the players who calmly continued when, with the worst position, she was also a queen and a knight to the bad? What of the lady who went on with the lone king against a bishop and two united pawns? What of the fair chessist who, having lost the queen for a rook, proposed to recommence, as the calamity was "quite an oversight?" And what of the foreign representative who explained to the lookers-on that she lost her games because she had not sufficient time to practise with strong players? The occasion was memorable as the first international chess tourney for ladies only, but the interest attaching to this unique circumstance was unable to extend itself to the chess, and, despite the Right Hon. Horace Plunkett, we do not expect that ladies will ever be able seriously to compete with men in open tournaments for both sexes. We remember the famous mates in thirty-six moves or so, which Mrs. Gilbert, a score of years ago, sent to us over the Atlantic, but correspondence play, with its facility of exhaustive experiment, is a very different matter from competition in a public arena; and we repeat that we do not expect to see the day when ladies will be able to seriously dispute the palm in international tourneys open to both sexes, nor do we wish to see it. Of one thing we are absolutely sure. Should any lady succeed in beating Lasker, Tarrasch, Pillsbury, and the rest, no man on earth, chess mad or otherwise, could ever be persuaded to marry her.

We (*Japan Mail*) desire to supplement these remarks. Just thirty-one years ago there was a lady in Hongkong who played a really fine game provided that the Evans' Gambit was always chosen. She had studied that particularly fine system of strategy for years, and what she did not know about it, no one need have cared to know.

The following is a specimen game in the Ladies'

International Tournament which reached an abrupt termination:—

WHITE—Miss Field.		BLACK—Miss Hon.

"PAWN AND MOVE."

He escorted her home from a party,
 Together they had joined in the dance;
 Mamma gave a welcome quite hearty,
 And he—he was killed by a glance.
 She told him she doted on chess,
 It was such a delightful old game;
 This was pleasing to him, you may guess,
 As he challenged the young lady's fame.
 He inquired, "Pray, do you love men?"
 Of course to the chess he referred;
 But—Papa, just coming in then,
 Kicked him out, without saying a word.
 Most chess players a moral will find,
 No doubt, in these verses fantastic:
 If ladies they play, let chess be combined,
 With a knowledge of matters gymnastic.

T. R. DARRY.

NOTES.

In an old book on chess, printed in London, 1650, the moves are given after this manner:—
 White king's pawns one house (P to K3).
 Black king's knights pawns two houses (P to K Kt4).

White queen to the contrary king's rook's fourth house (Q to K R5).

A Vienna telegram dated 20th October announces the death of Berthold Englisch. The cause of death was brain affection. Englisch withdrew from the recent Berlin tournament, declaring that his head was not clear. Rumour accused him of accepting a bribe from a weak opponent to withdraw, but his death disproves the report remarks Black Bishop.

We have received, says the *Literary Digest*, a number of original problems lately, requiring Castling as the key-move. We have expressed ourselves on this subject; but it seems that many of our friends did not see the article. There has been considerable discussion over the legality of Castling as the key-move; and, while there are those who believe it to be perfectly legitimate, the majority is against it. We do not consider it legitimate simply on account of the fact that it is impossible to demonstrate that White has the right to Castle. You can not prove to a certainty that neither the Rook nor King has been moved.

Brown Canton	3.45 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

There has been a moderate amount of business transacted during the past week, at slightly reduced prices, but the holders of stock are combining to prevent any further fall in rates and as a consequence at the close the market is dull. Total settlements from Nov. 18th to Dec. 1st amounted to 2,522 piculs, and stocks were put down on the 1st instant at 11,300 piculs all kinds. Shipments during the week have been 804 bales by the M.M. steamer *Ernest Simons*, for Europe; 1,131 bales per *Doric* and 410 bales per *Empress of India*, for America.

QUOTATIONS.

WASTE SILK.

The market is fairly active at strengthening prices, dealers holding out for an advance for the best grades, of which there is little in stock. About 2,000 piculs have been sold during the week and stocks are estimated at 11,000 piculs. The *Ernest Simons* shipped 626 bales for Europe on the 28th ult.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courtes, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a resplendent Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR HALLAM BURNETT, of "Newlands," No. 156, Bluff, Yokohama.—SATURDAY, DECEMBER 4, 1897.

The Japan Weekly Mail.

"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 11TH, 1897.

BIRTHS.

On the 28th of November, 1897, at Sans Souci Terrace, Bubbling Well Road, the wife of A. D. Lowe, of a son.

DEATHS.

At No. 9, Seward Road, Shanghai, on the 2nd instant, CATHARINE SOPHIA, widow of the late Robert Joseph Arnold of Southampton, aged 70 years.

At Tokyo, Hongo, Kiga-yashiki, No. 1, on Thursday, December 9th, MARGARET THERESA, beloved wife of EDWARD DIVERS, M.D., F.R.S.

At Anoy, China, on the 11th of November, 1897, from aneurism of the heart, FREDRIK WILNAU, Chief Light keeper, I.M. Customs, aged 40 years.

MARRIAGES.

At Shanghai, on the 1st December, at Trinity Cathedral by the Rev. H. C. Hodges, M.A., JAMES GIBSON of Chinkiang, eldest son of the late Daniel Gibson, merchant, Glasgow, to Lydia, eldest daughter of the late Henry Martin of Canterbury, Victoria.

On 2nd Dec., 1897, at H.B.M.'s Consulate-General, by Sir Nicholas J. Hansen, and afterwards at the Cathedral by the Rev. H.C. Hodges, M.A., ALFRED FULLERTON, of Shanghai, to MARY MAUDE QUELCH, eldest daughter of Charles Bewick Quelch, of Shanghai.

SUMMARY OF NEWS.

GERMANY is re-inforcing her forces at Kiao-chow Bay, bringing up the number to 4,500 men.

THE Ministers of State will proceed to Yokohama on the 12th inst. to inspect the battle ship *Yashima*.

THE Korean officers who came to Japan to

witness the military manoeuvres were received in audience by the Emperor on the 7th inst.

POLITICAL quidnuncs say that the next Cabinet will be headed by either Count Saigo or Count Kabayama.

THE new Palace at Mozawaryo, Nikko, for H.I.H. the Crown Prince will occupy an area extending over 10,000 *tsubo*.

AUSTRIA-HUNGARY is very much disturbed politically, constant quarrels breaking out between the German and Czech elements.

A FRENCH expedition, under Major Marchand, bound for the Nile, has been massacred at Bahr Ghazal, and only a remnant escaped.

AGITATION against the Business Tax is being busily fanned by various Chambers of Commerce in different parts of the country.

MARQUIS ITO will leave Oiso during the course of this month for the Ise Shrines, whence he will return to his native province, Yamaguchi.

A PROJECT is on foot to establish a horse and cattle market in Tokyo, at a cost of 25,000 *yen*. An office has been opened in Shiba, Tokyo.

FIGHTING still continues in the hills of the Indian frontier, though General Lockhart is gradually restoring peace and order among the tribes.

THE Meiji Fire Insurance Company, at its half-yearly general meeting to be held in January next, will declare a dividend of 15 per cent. per annum.

A MOST important memorandum upon the financial affairs of Japan has been handed by Count Matsukata to the Business Men's Association during the week.

COUNT MATSUKATA, Premier, proposes to issue Loan Bonds of small denominations, ranging from *yen* 20 to *yen* 50 to meet the requirements of small investors.

IT is reported that the silver *yen* now accepted by the Formosa Authorities in payment of taxes and Customs duties, will cease to be legal tender after the 1st of April next.

JAPANESE tailors of Tokyo and Yokohama have made, to the order of Messrs Illies & Co., some 700 suits of warm clothing and over-coats for the German force at Kiao-chow Bay.

THE members of the *Kokumin Kyokwai* (National Unionists) held a general meeting on the 5th inst. and decided to present a note to the Cabinet suggesting its immediate resignation.

THE opinion in favour of shortening the term of exchange of silver *yen* is increasing largely among the Authorities and a Bill in that sense will be laid before the coming session of the Diet.

AN extensive coal bed was recently discovered at Yokuyama, Ibi-gun, Gifu Prefecture. The examination of the mineral proved that its quality is excellent and the seam extends deep under ground.

THE authorities received a telegram on the 6th inst. to the effect that the revised Treaty between Austria and Japan was signed at Vienna on the 5th inst. by the respective plenipotentiaries of the two countries.

THE Governor of Niigata Prefecture, where the rice crop has utterly failed, has entered into negotiations with Messrs. Samuel Samuel & Co. of Yokohama for the speedy delivery of 5,000

tons of foreign rice to be distributed in the distressed districts.

On the 6th inst. the Spanish Minister in Tokyo presented to the Emperor a high Order bestowed by the Queen of Spain on the Crown Prince. His Imperial Highness was subsequently invested with the Order by the Emperor.

SOME 120 Korean students who have been studying at various colleges in the capital since the termination of the China War, were recently called home. Many of the students left Shimobashi for the Peninsula a few days ago.

THE estimated prison expenses this year are set down at about *yen* 3,600,000. The proposal will be laid before the Diet by the Home Department, but the Authorities are said to be inquiring as to where the money is to be obtained.

CAPTAIN WILLIAM WADDILOVE, for many years Master of the steamer *Yuen Sang*, running between Hongkong and Manila, committed suicide in the Club Hotel, Yokohama, on Thursday morning by cutting his throat with a razor while temporarily insane.

COUNT INOUE, who has now recovered from the carbuncle from which he suffered, will leave the capital in a few days for Shichirigahama at Kamakura, and after a short stay there will proceed to his villa at Okitsu, Suruga Province, where he will pass the cold season.

On the 6th inst., fire broke out in Higashimoto-machi, Fukagawa, Tokyo, and over 80 houses were reduced to ashes. About 3 a.m. on Monday, another fire occurred in Higashiryukan-cho, Kanda, Tokyo. The flames spread rapidly and over 40 houses were destroyed. During the fire four firemen are reported to have been injured more or less severely.

REUTERS says that it is understood that China regards the occupation of Kiao-chow as unjustifiable and contrary to international law. China will never consent to the Germans remaining on her territory, and will regard as an unfriendly act the recognition by the Treaty Powers of any annexation of territory by Germany without China's acquiescence.

BUSINESS prospects are not improving as the year draws near to its end. Indeed, matters look anything but promising in nearly all branches of the import trade and importers seem generally to have made up their minds to be content with a small hand-to-mouth business until such time as present stocks are worked off and the Japanese money market assumes a more tranquil appearance. A little business was done during the past week in yarns, at nominally the same prices as have been ruling for the past few weeks. Nothing was done in shirtings, fancies, or woolsens. The metal market was stagnant, but quotations are reported nominal. Considering the time of year, the kerosene market is abnormally quiet, and offers have been made by dealers at rates considerably below the market. But holders remain firm and refuse to budge. Sugar has seen a steady business, most being done in Brown at slightly increased rates. Stocks are low and the market firm. White refined was steady. Towards the end of last week and beginning of the seven days under review, quite a boom took place in raw silk, about 6,000 piculs changing hands at gradually hardening prices. Stocks are now down to 6,500 piculs. In Waste, similar activity prevailed, but quotations remain the same as before. Tea is almost finished now, only a few small purchases being recorded. Exchange remains steady.

SPIRIT OF THE VERNACULAR PRESS.

Foreign politics occupy the attention of a majority of the Tokyo journals at present. On the side of newspapers favourable to the Cabinet there is a disposition to regard the Kiaochow incident as a serious menace to the tranquillity of the East, and as a reason for abandoning internal dissensions and uniting the strength of all parties in the cause of the empire. On the side of the Opposition prints there is an emphatically declared conviction that such a view is not inspired by genuine solicitude for the national interests, but that it has origin in the crafty hope of diverting public notice from the faults of those in power. The *Nichi Nichi Shimbun*, for example, writes in that strain. Count Okuma, it says, fortunately for himself, was not called upon to deal with any international crisis. Minor matters did, indeed, demand his management, and he made more than one failure in connexion with them; but he escaped anything like a really serious situation. Baron Nishi, therefore, has been able to succeed to his predecessor's policy without making any marked change. But this apparent absence of trouble is very deceptive. The course of events in Korea is calculated to inspire profound uneasiness. A foreign State has managed to obtain control of the sword and the purse in the little kingdom, and unless Japan can do something to change the situation, she might as well step out of the field of foreign politics altogether. Her attitude towards China is also a matter of the greatest importance. Much depends on it. Here, then, are two regions in which Baron Nishi is required to show energy and sagacity. The Japanese are loyal and patriotic. In the face of a national peril, they forget everything but the interests of the State. Their representatives abroad, too, are worthy of the country. But there is one national fault: the people do not know their own value. They are apt to be perturbed by rumours that have no real importance. Advantage seems to have been taken of that defect at the present juncture by journals that support the Government. They magnify the German occupation of Kiaochow into something much greater than it professes to be, and employ it as a device for diverting men's observation from the faults of the Cabinet. Such a stratagem is most unpatriotic. It signifies that the interests of the empire are subordinated to those of a group of statesmen. It is to be sincerely hoped that the prestige of the State and the cause of peace will not suffer. In such a strain does our contemporary write at considerable length, being evidently uneasy lest this agitation, connected with Germany's occupation of Kiaochow, should weaken the arguments of those that deny the need of expanding the Army to the dimensions at present officially contemplated.

The *Fiji Shimpō* writes in a very different strain. It discusses, with an evident tendency to belief, the latest rumour, namely, that Russia, Germany and France have made a secret agreement to partition China, and that France's share of the spoil is to include Formosa. Such a programme seems difficult to credit, but, on the other hand, it must not be dismissed as incredible simply because it sounds astonishing. It would certainly be in strict accord with the spirit that animates the nations of the west at present. They stand watching each other, armed to the teeth. Might is right. International law is evidently considered to have lost all real influence as a guide of interstate action. We have to remember, too, the friendly meetings that recently took place between the Emperors of Russia and Germany and the President of France. Who will venture to assert that some understanding was not then come to with regard to the policy that the three Powers should pursue thereafter in the Far East? The occupation of Kiaochow may be the opening of the ball. At all events, Japan can not be too watchful. There is absolutely nothing for her to rely on but her own ability to defend herself. At such a crisis the squabbles of political parties

and the jealousies of cliques of statesmen are conspicuously inappropriate. The empire stands in urgent need of all the administrative talent it possesses. It will not do for Marquis Ito to look on unconcerned. It will not do for Count Okuma to wait smilingly until the mistakes of his opponents create an opportunity for his return to power. To these men and the other *Meiji* statesmen the country turns. Let them hold a grand council and organize a government worthy of the occasion. A man's sons may differ in their views about this question or that; may even be on hostile terms with one another; but when their father lies sick, they waive all personal considerations, and combine to minister to his sufferings. The *Fiji* urges this, its familiar advice, with much eloquence and persistence.

The *Mainichi Shimbun* asks its readers to consider the real causes that make Turkey and China the object of so many foreign aggressions and interferences. In China's case it will probably occur to every one to speak at once of her disorganised condition, of the inefficiency of her troops, of the absence of patriotism among her people, and of the incompetence of her administration. Such factors undoubtedly have their influence. But the most important of them cannot be said to exist in Turkey's case. There is no want of patriotism among the Turks; the administration of the country cannot be called radically defective for purposes of national defence, and the bravery and high quality of the soldiers are beyond question. What, then, places Turkey in the same category with China so far as concerns the treatment extended to her by foreign States? It is the fact that Turkey and China alike persist in remaining outside the pale of Western civilization. They are absolutely unprogressive. They differentiate themselves from all the nations of the Occident by turning their backs upon the enlightenment and advantages of Western moral and material civilization. That is the prime reason of the special attitude assumed towards them by the Great Powers of Europe. If the fact be clearly recognised, people will, at the same time, recognise the error of falling into a state of perturbation because Germany has seized a portion of Chinese territory by way of pledge that satisfaction shall be given for the murder of two missionaries. Such incidents are always liable to occur so long as China remains in her groove of stagnation; they do not indicate any new departure. Some people cry out that this Kiaochow affair is a warning to Japan, and that it shows the necessity of at once carrying out her programme of military expansion in all its entirety, and the necessity of proceeding vigorously with the fortification of Formosa. As to the fortification of Formosa, every one is agreed. Those that are opposed to military expansion on the basis now adopted, were precisely the persons to insist from the first on the advisability of rapidly pushing on the defences of the new territory. But so far as the general question of military expansion is concerned, the situation is not in the least altered by the Kiaochow incident. The causes that expose China to such misfortunes have existed always, and were taken fully into account by the publicists who contend that the doubling of Japan's Army is a needlessly large expansion.

While not placing implicit confidence in the rumour of a partition treaty under which France would take Fuhkien and Formosa, the *Nippon* nevertheless thinks that the mere circulation of such stories is significant. Japan flattered herself that she had gained admittance to the company of conquering nations, and that, in any future division of Oriental territory her claims would receive full consideration. But it now appears that she herself is included among the spoils to be divided. The advocates of military expansion point to this conjuncture with an air of triumph. They claim that it justifies their contention and demonstrates the importance of extensive warlike preparations. Do they, then, imagine that the march of events is to be sus-

pended until all their preparations are complete? On the contrary, everything points to the fact that Western Powers are determined not to wait for the consummation of Japan's *post bellum* programme. They will strike before large capacities for resistance have been developed. The lesson really taught by these incidents is that Japan should prepare herself to meet at a moment's notice the powerful forces already at her disposal. When she went into the war with China the Treasury had a large reserve ready to its hand. It was chiefly owing to that fact that the early operations of the war could be undertaken with the celerity so essential in these days of swift strokes and rapid collapses. None the less the nation had to be asked to contribute a hundred and twenty million *yen* for military expenditures. The people are patriotic. They will spare no effort on behalf of their country. But they can not give what they have not got to give. They were able to contribute in 1894 because they had the means to contribute. If, however, the resources of the state are to be exhausted for the purpose of expanding armaments which can not be ready for use in the time of emergency, and if the financial strength of the people is to be wasted by increased taxation in the interest of such military development, the country will find its arm paralysed at the supreme moment by that most enervating of all maladies, impecuniosity. Better a small force that can be utilized, than a big host that can not be employed for want of the sinews of war.

The *Kokumin Shimbun's* writing is dictated by the conviction that the preservation of peace in the Far East depends, not upon the division, but upon the union of China and Japan. The war undertaken by Japan against China in 1894 was not prompted by a desire to weaken the Middle Kingdom or to obtain possession of any part of its territory. Apart from the questions that directly precipitated the struggle, the two main purposes of the undertaking were to rouse China from a lethargy that must eventually render her an easy prey to any strong State with aggressive ambition, and to demonstrate to her in the most convincing manner the superiority of the civilization that she despised. The interference of Germany, Russia and France opposed an obstacle to the achievement of those objects, but Japan did her part. It may indeed be said that the object lesson furnished by her successes has received a rude extension at the hands of the Three Powers which, under pretence of preserving the integrity of the Chinese empire, are seeking in its dismemberment a reward for their protective benevolence. In the affairs of individuals a temporary falling out generally preludes the renewal of stronger friendship. Such ought to be the case with rational men and such ought also to be the case with nations. Japan's aim now should be to re-cement amicable relations with China, and to extend a helping hand to her neighbour in the latter's hour of need. The advisability of such a policy points also to the advisability of so strengthening Japan's armaments that her voice shall have weight in the councils of peace. She must follow up her original purpose, too, by impressing upon China the significance of the Kiaochow incident. It is palpable that the sympathies of the Occident are with Germany. All the foreign journalists in the Far East write in support of Germany. They scarcely pause to consider whether her procedure has been opposed to, or consistent with, the principles of international morality. It is enough for them that her hand is raised against China. What is the explanation of that fact? It is to be found unquently in China's unprogressive policy and in her anti-foreign prejudices. The civilized world is against her because she is against the civilized world. She ought to be able to learn the lesson so plainly taught by events and to profit by it. Even Japan, too, may derive advantage from such instruction.

The statement now industriously circulated, that the Cabinet intends to invite all the *Meiji* statesmen to a conference for the purpose of discussing the situation created by the Kiaochow

chow incident, furnishes a text to the *Chuo Shimbun* (National Unionist organ). It ridicules the incapacity that drives the Ministers of the Crown to have recourse to the clan statesmen in the hour of emergency, and to seek to shift the burden of responsibility from their own shoulders. If they are not competent to deal with a crisis like the present, let them stand aside and surrender the management of affairs to the hands of abler men. There is nothing novel or unexpected in the situation created by Germany's action at Kiao-chow. Such an incident might have been anticipated at any time during the past two years. It merely emphasises the indications long ago apparent to careful observers. The question was not whether China's integrity would be maintained by the Three Powers which had put themselves forward as its ostensible guardians, but how long they would refrain from becoming themselves its assailants. Let one stretch out its hand and the others would surely hasten to follow suit. Germany, Russia and France are the three Powers that now menace the East. As for England, it would be a great mistake to interpret her apparent quietude in the sense of either indifference or unpreparedness. England is never precipitate. She acts deliberately, is unfailingly watchful of her own interests and strikes hard when she does strike. Her action with regard to the Transvaal last year is an illustration. The Emperor of Germany attempted to interfere between Great Britain and the Boer Republic. He apparently thought an opportunity had arisen to make a display of German prestige and that England would not be moved from her pacific attitude. But England suddenly mobilized a powerful squadron and despatched it at almost a moment's notice to South Africa. It was like a thunderbolt in a clear sky, and the Emperor of Germany drew back at once. England is not asleep in the Far East. The recent movement of her China Squadron to Sansha was full of significance. But her hands are pretty full at present. She is confronted by possibly serious complications with France in Africa. She is conducting a difficult campaign in the Soudan. She has just grappled with a terrible famine in India. She is in the act of quelling a formidable revolt of frontier tribes on the northern marches of her Indian empire. It is a good opportunity for those that seek an opportunity to steal a march on her. But the fact is that England, Japan and China are in the same boat. England and Japan are vitally interested in maintaining and developing the commerce of the Chinese empire, and in repelling aggressions that would interfere with it. What is needed is a clear understanding between the three. There lies the key of Japan's foreign policy. If the present Cabinet Ministers are unable to comprehend the situation and to deal with it, let them make way for better men.

THE CIRCUS.

Willison's Circus still continues to receive a fair share of public patronage, in spite of several counter attractions in the way of entertainments. The programme on Tuesday evening contained several new acts, which proved the versatility of the leading artistes of the troupe. Amongst other novelties little Elsie St. Leon gave a pretty exhibition on the high trapeze, Silveni the Silly caused much amusement in his act with the Jerusalem Cuckoo, Miss Ida Vernon and Alf. St. Leon performed a double act of equestrianism on bareback steeds; the Virets brought down the house with their wonderful contortions, and Miss Freda Willison performed with skill and grace on the slack wire. The clowns Silveni were as funny as ever and in conjunction with their three well trained "mokes" gave the spectators many a hearty laugh. We understand that there will be no public performance this evening, Wednesday, the ring being given up for a grand rehearsal of amateur equestrians and gymnasts who are to take part in Mr. Bert Willison's benefit performance on Friday evening.

THE KIMBEI RAILWAY.

This line, which is now in course of construction, is the shortest route between the central part of the Kiushiu collieries and the port of Moji (the port of export). It crosses two valleys separated by a mountain pass, known as the Kimbei Pass, which necessitates a tunnel of 1,300 metres in length.

Six years ago, several Railway Companies, such as the Kinshiu, the Hōshiu, and the Chikuhō, were rival applicants for a Government charter to build the line; but the Authorities being uncertain as to the progress of the collieries, and moreover apprehending great difficulty in cutting such a long tunnel, refused to grant a charter.

Since then, the coal-mining industry having received a great impetus on account of the marked appreciation in the price of the mineral, the numerous mine-owners situated on both sides of this line have been anxiously looking for its completion, as it will provide an easy and cheap route for the carriage of the mineral, the daily export of which will then certainly exceed 6,000 tons.

The apparent difficulty attending the making of the long tunnel has been removed by a discovery—after boring two intermediate shafts—that the portion of the mountain to be cut through is a continuous stratum of limestone of the softest kind, so that the work can be executed much more easily, rapidly, and cheaply than was at first anticipated.

The total length of the line is 27 miles (43 kilometers), the gauge, 1m. 06, the maximum gradients (on the side of the heavier trains) 0.013, and (on the side of the lighter trains) 0.025. One locomotive of 34 tons, with 3 coupled axles will pull up a train of 220 tons dead-weight on a gradient of 0.013 at a speed of 30 kilometers an hour. On a single line the quantity of outgoing coal that can be carried is estimated at 2,600 tons per day; and with passengers and incoming goods, the gross daily receipts will amount to 1,527.56 yen. The present scheme is only for a single line, but when the necessary resources are obtained, the line will be doubled.

The capital is 3,000,000 yen and the annual profit is expected to be 13.6%; should the capital be increased to 4,000,000 yen so as to admit of doubling the line, the expectation is that a profit of 20 per cent can be realized. It will be observed that the former of these estimates is based on the calculation that the working expenses of the line amount to only 27 per cent. of the gross earnings. From another point of view, however, the figures are probably reasonable, since they allow 5,600 yen per mile, in round numbers for working expenses. At all events, the projectors are so confident in the soundness of the enterprise that they are pushing it vigorously, despite the exceeding tightness of the money market at present. We make special allusion to the matter because it seems to offer a sound and profitable investment for foreign capital. In our opinion Japan has reached the end, or very nearly the end, of her domestic stores of capital. Indeed, the wonder is, not that she has reached the end now, but that she did not reach it long ago, for she has been carrying out all kinds of enterprises during the past thirty years almost without foreign aid, and the majority of observers imagined that she would be obliged to turn to the money markets of the West about the year 1887 or 1888. She has outlasted expectation by some ten years, but the time of pressure has finally arrived, and with it the opportunity for foreign capitalists. The stock of the Kimbei Railway ought to be very valuable, one of these days. We should add here, lest we appear to be puffing a special enterprise, that we know nothing of the matter beyond what has been set down above, and that the particulars have been furnished by Japanese interested in the line. They are, however, men of high reputation.

TRIAL TRIP OF THE "SANUKI MARU."

On Monday, in beautiful autumn weather, the trial trip of the *Sanuki Maru* (Capt. W. Townsend), one of the magnificent 6,000-ton ships that the Nippon Yusen Kaisha have had specially built for the European trade, came off over the measured course on the Boshu side of Tokyo Bay. The *Sanuki Maru*, which was built by Messrs. Napier, Shanks, and Bell of Yoker, is of 6,117 tons register, with a gross displacement of 9,610 tons. She is 455 feet long, with a beam of 49 feet, a depth of 29.7, and her two sets of triple expansion engines develop an indicated horse-power of 3,500 (nominal 550 horse-power). The day was perfect for such a trip, the strong north-easterly breeze that was blowing when the *Sanuki* left harbour at 10.40 a.m. dying away almost to a calm before the measured mile was reached. The vessel was drawing 13 ft. 2 in. forward and 16 ft. 8 in. aft.; she was loaded with 1,488 tons of coals, 350 tons of water, and 158 tons of provisions. The conditions attaching to the trial-trips of vessels that seek to qualify for the Government subsidies awarded under the Navigation Encouragement Act are rather severe, the ship being required to keep steaming at full-speed—no allowance being made for turning—for six hours, and the three-mile marks have to be passed six times. The *Sanuki Maru* acquitted herself well, however, developing an average speed of 14.58 knots per hour. The revolutions made by the port engine totalled 83, those of the starboard engine 88, with a pressure of 200 lbs. per square inch. The first mile was started at 11.26 a.m., and the last mile was notched at 2.53 p.m., the vessel being back in harbour by 4 o'clock.

A very large company assembled to witness the proceedings, including Mr. Kondo, President of the Company, who was accompanied by sixty guests; Mr. Tamio Hayashi, Manager of the N.Y.K. in Yokohama; the N.Y.K. agent in Hongkong; Capt. Kimotsuke of the Imperial Naval Bureau; the examining board of the Teishinsho; Mr. Tanaka, Mr. Kagami; Capt. Efford and Mr. A. F. McNab, Lloyd's surveyors in Yokohama; Mr. Shibata, and many others. These gentlemen sat down to a splendid luncheon served in the pretty saloon, after the trip was over, under the presidency of Capt. Townsend, and afterwards the usual toasts were given and responded to.

We have already given a full description of the sister ships of the *Sanuki Maru*, so we need not detain our readers with a *resumé* of her passenger accommodation and internal fitting. Suffice it to say that she is one of the handsomest boats trading between London and Yokohama.

SENATOR PETTIGREW AND THE GOLD STANDARD IN JAPAN.

Senators Pettigrew and Dubois are now in Hawaii—or were there at the date of our latest advice, Nov. 12th. Interviewed by a representative of the *Hawaiian Gazette*, Mr. Pettigrew said:—"The change from a silver to a gold standard in Japan was forced by the banking or creditor element. The manufacturers now see that they have been hit hard. Their trade with China has been ruined and their commerce as a whole will be seriously injured." This dictum is a little perplexing. Senator Pettigrew seems to place the creditor class in Japan in the same category with the creditor class in England. It is very distinctly to the interest of Englishmen who have made large investments of capital in silver using countries that the interest and principal of the debt should be payable in gold, which is a constantly appreciating medium. But Japanese capitalists have no investments abroad. Their investments and loans have been made in silver and they are not interested in having either the interest or principal paid in gold. It can not be truly said, we think, that the creditor class had anything to do with the adoption of the gold standard in Japan.

THE KIAO-CHOW AFFAIR.

Now that China's consent to open negotiations has been announced, Germany remaining at Kiao-chow the while, public interest centres mainly on the course that the Berlin Government will decide to pursue after all its demands have been conceded. We say "after its demands have been conceded," not "if they should be conceded," because it is beyond doubt that China, having descended from the position originally assumed by her and having agreed that her opponent shall retain his clutch upon her throat, during the conversation, will confine herself to very small talk. She will do what Germany asks her to do. We assume that the occupation of Kiao-chow will then come to an end. Indeed, we have assumed throughout the whole affair that Germany's procedure has been regulated by the elementary tenets of international law. It is difficult, certainly, to construct a working theory altogether consistent with that assumption, but on the other hand, no newspaper has a right to prefer charges of uncivilized conduct against a civilized state without conclusive evidence. In this case the evidence is far from conclusive. It is quite within the range of possibilities that Germany convicted Peking of a shuffling, equivocating mood before she sent her squadron to Kiao-chow, and since if she reversed that order of action, she was guilty of a flagrant outrage, we are bound to believe that she did not reverse it—bound to believe it, at all events, so long as belief is possible, though so many commentators have showed no manner of hesitation in accepting the opposite hypothesis. It remains now to be seen whether she will quietly evacuate Kiao-chow after the satisfaction of her just demands. If she does, the manner of the place's original seizure will not be very closely scrutinized, and she will emerge from the complication with full honours. As for the demands themselves, many of the tales circulated about them are probably nothing more than wild rumours. That is especially presumable with regard to the story that mining, railway-building, and cognate privileges in Shantung have been asked for, and that a permanent naval station is also among the requirements. The murder of two missionaries by a band of robbers or bandits could not be made a basis for territorial and industrial demands without such a forfeiture of dignity as the German Emperor is not at all likely to contemplate. It may be presumed that the demands are a substantial indemnity, the arrest and execution of the leading assassins, the degradation and punishment of the local officials who failed to protect foreign life and property, the rebuilding of the mission house, and, perhaps, an Imperial proclamation denouncing such outrages and declaring that the missionaries are under national protection. Of these demands, the only one likely to cause any special difficulty will be the degradation and punishment of the local officials. The Chinese Government has always shown much hesitation in taking measures of that kind at the dictation of foreign Powers. Yet the fundamental principle of Chinese administration is the responsibility of individual officials. The central Authorities never show the slightest hesitation about applying that principle in the con-

trol of domestic affairs. An admiral is degraded if he loses his ships, a general is decapitated if he bungles a campaign, a diplomat is thrown into prison if he misconducts a negotiation, and a governor is sent to work on the post roads if he fails to preserve order in his district. Precedent of that nature has been piled upon precedent during the past two thousand years and it would be idle now to tell the inhabitants of a province that their governor had acted in opposition to the Imperial wishes if he were suffered to remain unrebuked in the discharge of his duties. We may be permitted to hope, therefore, that Germany will insist on that condition. As to the amount of the indemnity, a great deal of indignant surprise has been expressed by Japanese journals. Six hundred thousand taels, they say, is a monstrous sum to demand by way of *solatium* for the families of two missionaries. With regard to that, our vernacular contemporaries appear to forget that there is such a thing as imposing a monetary fine on a State as well as levying compensation on a locality. It is not necessary to look beyond the pages of Japan's modern history for an example. When Mr. Richardson was killed and Messrs. Clarke and Marshall were wounded by armed *samurai* at Namamugi on the 14th of September, 1862, her Majesty's Government exacted a sum of £100,000 from the Japanese Government by way of penalty on Japan, and a further sum of £25,000 from the Satsuma Fief for the relatives of the murdered man and for those that had escaped the swords of the *samurai*. A hundred and twenty-five thousand pounds sterling is the equivalent of \$1,250,000 at the present rate of exchange, and Germany's demand is only \$850,000 (600,000 Tls.). There is nothing extravagant in the amount. The very much smaller sums hitherto levied from China in like cases have not been felt.

The Kiao-chow incident occupies the attention of Japanese journalists almost to the exclusion of any other topic. We have summarized leading articles only in our Summary of the Vernacular Press paying no attention to paragraphs and notes. To attempt any epitome of these minor utterances would be to overtax the patience of our readers. It is noteworthy that the rumour about France's designs upon Formosa has found considerable credence among the Japanese, especially from the *Fiji Shimpō*, a newspaper which certainly might have been expected to discriminate more wisely. We venture to say that not half-a-dozen foreigners in Japan attached the smallest importance to the story. Every one dismissed it as a veritable "bunder." Some curiosity may have been felt about the author of the tale, but the assertions it embodied were not even thought worthy of ridicule. The *Fiji*, however, says that the source of the information imparts to it undeniable importance. What the source is we are not told, and on the whole our impression is that the *Fiji* owes its credulity to the propensity which the retailer of a story so often develops, the propensity to become its champion instead of merely its transmitter. The French were the chief demonstrators of the value of the *Pescadores* as an anchorage; they carried on a painful and fruitless campaign against Formosa, and the tomb of their brave Admiral Courbet stands on one of the

little islands. All that is very true, and it is equally true, as the *Fiji* remarks, that many Frenchmen have not yet learned to discriminate clearly between China and Japan, that a still greater number regretted their country's failure to obtain possession of Formosa at the time of the "Three Powers' intervention," and that all would rejoice to see the tricolour floating over the island. But there is an immense gulf between such facts and a deliberate scheme on the part of the French Government to brave a war with Japan by attempting the seizure of Formosa. It is not worth while to discuss the *canard*.

Another point which occupies attention is the Japanese Government's abstention from sending a man-of-war to Kiao-chow Bay. That is explained by the *Yomiuri Shimbun*. It says that if a foreign man-of-war went there, it would have to choose between saluting the German flag which floats over the fort, and mortally offending Germany. The former course would seem like a recognition of the German occupation. The latter is to be avoided, as a matter of option. Thus all Powers alike are careful not to send a ship.

Now that China has agreed to negotiate, leaving the Germans in possession of Kiao-chow pending a settlement of claims, allusion may be made to a phase of the affair which seems to have either escaped attention or been left purposely unnoticed. Suppose that China had declared war in consequence of the violation of her territory, and then quietly folded her hands and left Germany to work her will. What could the German squadron have done? Its potentialities for raiding the coast of China would have been strictly limited to the quantity of coal now in the bunkers of the ships. Fresh supplies could not have been obtained. Moreover, the *squadron* of German cruisers now *en route* for the Far East must have stopped on the way: all the coaling stations would have been closed to it. It is at a crisis like this that the immense advantages possessed by a Power like England in the East become appreciable. People talk of a combination on the part of France, Russia and Germany to partition China. Assuredly the presence of France in such a combination would be essential, for without her Tonquin mines, the ships of the allies would be powerless. Even with her Tonquin mines, however, the coadjutors would fare ill. To have to go such a distance for coal would be bad enough, but much worse would be the fact that access to the solitary coaling station could easily be prevented by Great Britain. If, at the same time, England and Japan were allies, sorry indeed would be the plight of their enemies. The Germans at Kiao-chow appear to be drawing their supplies from Shanghai at present—an extraordinary phase of modern naval operations, it must be confessed: a foreign Power making a foreign settlement in China its basis of operations for a hostile seizure of Chinese territory. How the steamer, or steamers, that act as tenders for the German Squadron manage to obtain their clearance from the Imperial Chinese Customs, we are at a loss to conceive. The ineffable contempt for China that all these proceedings evince is paralleled only by her own utter incapacity to resist them. Will she ever awake? One imagines that a slumber so troubled as hers must have quite ceased to be enjoyable.

TREATY REVISION.

The revised Treaty with Austria-Hungary was to have been signed yesterday. A very long time has been occupied in the negotiations, partly owing to delays incidental to the dual nature of the Austro-Hungarian Administration, and partly because Austria-Hungary showed a persistent desire to conclude a Conventional Tariff on her own account, whereas the paltry dimensions of her trade with this country did not seem to warrant any such arrangement, according to the view of the Japanese negotiators. Japan, however, finally yielded to the wishes of her *vis-à-vis*, probably thinking that the same reason which made her unwilling to concede an independent tariff on account of a trade of four or five thousand pounds sterling, constituted also a reason for not showing much obduracy. The issues at stake were too small to be a serious obstacle. We learn, further, that the committee of the French Senate has reported favorably on the revised Treaty with France. Our readers are aware that the Treaty has already received the approval of the Chamber of Deputies. Its endorsement by the Senate also now seems certain, and the work of Treaty Revision will then be consummated, for the ratification of the Austro-Hungarian Treaty is not likely to involve any delay.

Concerning the prospect of the revised Treaties going into operation in 1899, as originally contemplated, we see no reason to anticipate a difficulty. The remaining portions of the Civil and Commercial Codes have still to be passed by the Diet, it is true, and if, as seems very probable, the Diet is dissolved, there may be no time for these bodies of law to receive the attention of the Legislature until the re-assembly of the Houses after the general elections. But the dates are practically subject to the control of the Government. The only constitutional provisions bearing on the subject are that the new House of Representatives must meet within five months at latest from the day of dissolution, and that an interval of forty days must separate the meeting from the issue of the rescript convoking it. If dissolution takes place in January, there is nothing to prevent the holding of the elections in March, and the re-assembly of the Diet in April. Even though the full interval of five months were allowed, the Houses would come together in May, and since the remaining portions of the Codes need not go into force until the middle of July, there will evidently be ample time for their adoption and promulgation. At first sight it may seem a somewhat precipitate procedure to carry such a body of laws into effect within a few weeks from the date of their promulgation. But two things have to be remembered in connexion with that apparent difficulty. They are, first, that there is question, not of the whole Codes, but only of the remaining portions, the larger part having already become the law of the land; secondly, that these Codes have been in the hands of Japanese judicial officials and barristers for nearly eight years, and that their provisions may be said to have been applied during all that time. The bench and the bar alike are perfectly familiar with them. We may take it for granted that every possible effort will be made by the Japanese Government to complete all the preliminaries essential to the operation of the Treaties

at the appointed time. After so many years of persistent effort, the nation would be bitterly disappointed by any postponement. Besides, there is the practical consideration that the work of revision would have to be undertaken with countries which, like America and Spain for example, have concluded treaties to become operative from a fixed date, independently of any contingencies connected with the Codes. Such treaties could not go into force if the operation of the treaties with other Powers were still in abeyance.

It may be worth while to repeat here what we have already stated more than once, namely, that Japanese journalists and Japanese officials do not speak, and never have spoken, of "enforcing" the Treaties. The word used is *jissshi*, which means "actual carrying out," i.e. "operation." Last year when a committee was appointed to make preparations for the operation of the Revised Treaties, one of the local English journals, misled by a defective translation, complained that the Japanese were taking a step which indicated their animus in the matter: they were preparing to "enforce" the Treaties. What they were really doing was devising measures to remove anything that might prove irksome to foreigners, or give cause for complaint, when the time arrived for putting the Treaties into operation. The reality was exactly the opposite of the fiction suggested to the local newspaper by its translator's imperfect knowledge of English. We pointed out the misapprehension at the time, but the newspaper in question took no step to correct the false impression produced by its previous writing. Another local English newspaper, speaking in a recent issue of the Revised Treaty, calls it an "objectionable instrument which the Japanese press delights in telling us will be enforced." The Japanese press does nothing of the kind. It has never used with reference to the Revised Treaties an expression bearing any resemblance to "enforced" in the sense of our local contemporary's version.

FRANCE AND FORMOSA.

It really seems to be a fact, incredible though it be, that an editor, or sub-editor, or paragraphist of the *Yiji Shimpō* attaches credit to the absurd rumour recently circulated about France having entered into an agreement with Russia and Germany for the partition of China, France's share to be Fokien and Formosa. The *Yiji* remarks that the foreign residents of Formosa—chiefly French and German—have been for some time occupying themselves busily with investigations into the administrative mistakes committed by the Japanese, and that the officials of the Government were disposed to suspect them of seeking to obtain materials for organizing a campaign against the operation of the Revised Treaties in 1899. It would now appear, however—in view of the aggressive designs attributed to France—that the real object of the investigators has been to find a pretext for the annexation of the island by that Power in the interests of civilization and humanity. It may interest the *Yiji* to hear that the query suggested to foreigners by this story about France and Formosa is, who can the Pinto be that manufactures such "bunders."

A FOREIGN LOAN.

There is a very strong movement among the business men of Tokyo in favour of a foreign loan. A similar idea seems to prevail in Osaka, but at a meeting of merchants and manufacturers held in that city on the 2nd instant, it was decided that the project of obtaining foreign capital for the Industrial Banks throughout the empire should be postponed, and that the need of the moment ought to be met by extending the note-issuing power of the Bank of Japan. In Tokyo, however, it would appear that unanimity virtually complete exists in mercantile and manufacturing circles as to the advisability of at once raising a foreign loan of 200 million *yen*, and applying the money to redeem bonds now held by the people. Some fifty-four of the most prominent business men of the capital assembled in the Imperial Hotel on the 2nd inst. to discuss the financial situation—not the financial condition of the Treasury but that of the people. Several speeches were delivered—by Messrs. Oye Taku, Manaka Chuchiyoku, Suyenobu Michinari, Inouye Kakugoro and Umakoshi Kyohei—all in the same strain, namely, that the country has urgent need of foreign capital. The general contention was that the Government had withdrawn a large sum—150 or 160 million *yen*—from the capital owning class for warlike purposes, and instead of restoring the money by means of the Indemnity, had applied the latter also to unproductive ends. Practically that was the whole argument. Arguments, indeed, were not needed, for the meeting had evidently made up its mind from the first. It unanimously passed a resolution in favour of a foreign loan, and appointed a committee of twenty to promote the project. A still more influential gathering of prominent merchants and manufacturers took place on the 5th instant, when an essay of great interest and weight was read, advocating a reduction of the military expansion programme, and the raising of a foreign loan of two hundred million *yen*, the proceeds to be devoted to redeeming War Bonds and other State securities. This movement is now developing such importance that the Government will scarcely be able to resist it. In our opinion, the sooner steps are taken to introduce foreign capital, the better. It must be confessed that the time is not very favourable. We doubt whether Japan could place a five-per-cent. loan on better terms than 94 or 95 in the London market at present if she offers only the national credit as security. But if she could persuade herself to lay aside all sentiment and to approach this purely business question in a purely business spirit, she might get what she wants much more cheaply. On the security of the customs duties, which will reach some twelve million *yen* annually when the new Tariff goes into operation, she could doubtless raise a four-per-cent. loan of two hundred million *yen* at par. That security, supplemented by her national credit, would be unimpeachable. It would be a most hopeful sign did the leading merchants and manufacturers advocate the floating of a loan on that basis. Japan can not afford to be romantic just at present. The time will come—before many years, too—when her credit will suffice without any tangible security to attract foreign capital, but she is at a crisis of her career now, and she ought to

put her pride in her empty pocket and face the situation bravely. It would be incomparably more creditable for her to place a 4-per-cent. loan at par on the security of the customs than to float a 5-per-cent loan at 94 on the security of her national faith. In every-day life men offer their personal security only when they have nothing else to give, and they have to pay correspondingly dear for accommodation. There is no valid reason why the conduct of States should be different.

DEVELOPMENT OF JAPAN.

The growth made by Japan since she began to receive the sunshine of foreign material civilization has very naturally surprised the world and furnished an interesting theme for many pens. During the first twenty years of her remarkable progress, she was regarded chiefly as an entertaining phenomenon, which Europe and America might contemplate without any disturbing thought of competitive contingencies or other troublesome eventualities. People looked at her, in short, much as indulgent parents or guardians look at a precocious lad who rapidly outgrows his frocks and jackets and develops capacities disproportionate to his years and opportunities. But just as the youth gets into man's garb, one fine morning, and becomes a disturbing factor in the life of his elders, so Japan has suddenly attained such a stature that she now obtrudes herself inconveniently upon the observation of the world instead of remaining an object of unconcerned though interested scrutiny. What people ask themselves now-a-days is, how far she may be expected to go, not how much she has already accomplished. Surprise that she has already done so much has been replaced by anxiety lest she should do a very great deal more. The *Shogyo Shimpō*, which, under the direction of its new and able editor, Mr. Saito Shuichiro, is now not only one of the most instructive but also one of the most thoughtful journals in Japan, looks back eighteen years, and marvels a little at the retrospect. It recalls how people opened their eyes in 1880 when the Mitsubishi firm invested a million *yen* in the Takashima coal mine, an example of enterprise that nearly took away the breath of the public of that era. A few years later, the Mitsui House paid four million *yen* for the Miike coal mine, and more recently the Iwasaki House (Mitsubishi) purchased the Sado and Ikuno gold and silver mines and the Osaka Smelting Works from the Imperial Household at an outlay of some three millions. All these incidents familiarized the people with big transactions, so that the recent investment of 17 million *yen* in Osaka Harbour Works Bonds by the Third Bank has failed to elicit any special comment. It has been the same in nearly all directions. Thus, the foreign trade of the empire, which totalled 73 million *yen* in 1880, rose to 289 millions in 1896; in other words, the volume of trade quadrupled in sixteen years. Turning to the question of facilities of communication, we find that whereas the tonnage of the mercantile marine in 1880 was 41,215 tons, and the mileage of railways in operation was 72 miles 98 chains, the tonnage in 1896 was 224,509 tons, and the length of railways in operation was 2,290 miles 41 chains. The

mercantile marine had quintupled and the length of the railways had been multiplied by thirty during that period. The *Shogyo* includes in this retrospect the figures relating to the revenue and expenditure of the State. In 1880, the public income and outlay stood, respectively, at 63 million *yen* in round numbers, whereas in 1896 the corresponding figure in each case was 239 millions. But such a cursory statement, as we have frequently pointed out, is quite misleading. In our review of post-bellum finance, published some months ago, we showed that the country is now engaged carrying out a programme of extraordinary expenditures which aggregate 555 million *yen* in round numbers. The portion of these expenditures and the income provided to meet them that appear in the Budget for each year, must be eliminated before we regard the Budget as a statement of normal public finance, or compare its figures with those of years antecedent to the inception of the programme. Apart from that criticism, however, we are compelled to endorse the conclusion of the *Shogyo Shimpō* that the progress of Japanese industry, commerce and finance during the past sixteen or seventeen years has been such as to dispel any apprehension of a seriously retrogressive movement. Periods of stagnation there will be, of course, but a regular set-back need not be feared. The real question is, where will it all stop.

THE NIPPON YUSEN KAISHA.

It appears that Mr. Arai Shogo is at the head of the clique of shareholders who desire to reduce the reserve appropriations of the Company in order to provide funds for paying a dividend. Mr. Arai made a considerable mark in the first session of the Diet. He had acquired a great reputation during the years of pre-Constitution agitation, and when the Diet met, he showed himself to be a debater with a remarkable command of language and a strong determination to harrass the Government. Then he suddenly lapsed into silence, and remained silent. Session after session the House heard his voice no more. Such phenomena are not altogether infrequent in Japanese political life, but how to explain them we do not know. The Reserves of the Nippon Yusen Kaisha are of three kinds, and the amounts that have to be added to them annually before any dividend is paid are fixed by the rules. There is the insurance reserve, to which 5 per cent. of the value of the fleet has to be carried each year; the repairs reserve, which takes 3 per cent., and the deterioration reserve, which calls for 5 per cent. Thus a total of 13 per cent. of the value of the fleet has to be set aside from the profits before any dividend is declared; which means a sum of 1,560,000 *yen*, taking the value of the fleet at 12 millions. Mr. Arai is reported to advocate reducing the reserve appropriations from 13 to 6 per cent., and he has found a sufficient number of supporters to warrant the calling of an extraordinary general meeting on the 22nd instant. Of course, if he succeeds in carrying his point he will ruin the Company. It would at once become an unsound concern.

THE TSUKIJI LITERARY AND MUSICAL SOCIETY.

A very successful meeting of the Tsukiji Literary and Musical Society took place from 8 o'clock on the evening of the 4th instant. The hall was crowded, and an excellent programme was rendered. Miss A. Page and Miss G. Page opened the proceedings with a duet on the piano, which was followed by a song from Mr. Arnold, a new arrival, happy in the possession of a fine baritone voice. Miss Spencer, of the Ei-wa Gakko, then recited a humorous piece—the adventures of four American children in the absence of their parents—and delighted the audience by her really skilful rendering of this ideal page of nursery naughtiness. A violin quartette by Miss Page, Miss A. Page, Miss H. Page and Master Page, the piano accompaniment by Mrs. Page, was given with admirable taste and finished execution, and the programme concluded with a song by Mrs. Garst, whose beautiful mezzo-soprano voice it is always a treat to hear. His Excellency Colonel Buck, the United States Representative, then took the chair, and after a few appropriate remarks expressing his sympathy with the objects of Society and the pleasure it gave him to assist at the meetings, announced that the pastimes of the evening having now been concluded, the business would be proceeded with. A somewhat desultory discussion ensued, in the course of which it was explained that the association had hitherto existed as the Tsukiji Literary and Musical Society, and that a desire to extend its scope so as to make it the Tokyo Literary and Musical Society was the main object of that evening's meeting. Some of those present were in favour of then and there elaborating a scheme of reorganization, the difficulty of impromptu work being counterbalanced, in their opinion, by the advisability of taking advantage of such an unusually large gathering of actual and possible members. It was finally decided, however, that a committee of three should be nominated by the President, Colonel Buck, with instructions to prepare a revised constitution and set of rules for submission to another meeting on Saturday the 18th instant, those present being invited, however, to signify at once their conditional willingness to join the new Society. The President named Mr. R. T. Kirby, the Rev. E. Leavitt and Captain Brinkley to serve as a committee of organization, and the Committee subsequently added to its number Miss Terry.

JAPANESE AFFAIRS IN ENGLAND.

An examination of the British journals reaching Japan by each mail, shows that the affairs of this country attract wide and intelligent notice in the United Kingdom. From time to time the flippant editor of a society journal or the jaunty paragraphist of a serio-comic periodical, tells us something wonderful and startling about the "Japs," but, on the whole, it may now be confidently asserted that in no part of the world is Japan taken more seriously or considered more soberly than in Great Britain. By way of illustration, we may refer to the notices appearing in the newspapers of England and Ireland between the 14th and the 19th of October, the interval covered by our last batch of exchanges.

No less than twelve journals devote a part of their columns to Japan, and the great majority of them write in an appreciative and intelligent manner. The *Bury Guardian*, the *Birmingham Post*, the *Cork Constitution*, the *Cork Weekly News*, the *Dublin Express*, the *Dundee Advertiser*, the *Hull Eastern Morning News*, the *Liverpool Journal of Commerce*, the *Manchester Courier*, the *Newcastle Leader*, the *Nottingham Express*, the *Southport Visitor*, all believe that their readers are sufficiently interested in the Far Eastern empire to welcome any new facts about it. The Nagasaki Consular Trade Report evidently attracted much attention in consequence of the statements it contained about strikes among Japanese labourers and mechanics. It was a surprise to people in England to learn that "the 'gentle Jap' had now become truculent, arrogant and exacting as any of his fellows throughout the world." It is somewhat of a surprise to us also to learn that such is the case, but the Consular Trade Report is responsible for the exaggeration, not the journals that comment on it. We observe with some amusement that several of these journals speak of "Mr. Consul Lowther" in connexion with the trade reports for several places. The idea that H. M. Chargé d'Affaires does not necessarily write the documents forwarded by him, has evidently not entered the conception of these newspapers. The *Cork Weekly News* is the only one of the twelve that takes a bold flight of fancy. We quote a paragraph from it, and recommend the Emperor's translators to submit it for his Majesty's amusement:—

The Mikado of Japan is bent on improving the native strain of horses, for his agents, who have recently been all through Europe for the purpose of buying horses, are now travelling in the United States with a view to purchasing twenty more horses for the Imperial stables. His Majesty is passionately fond of horses and racing, and owns about 3,000 animals, 2,000 of which are kept at the Imperial farm in Niccap, 600 at Simoussa, and the remainder at Sotoyama. Racing, however, is pursued solely in the interests of sport, for no betting rings are allowed on any of the courses, as the Emperor is opposed to gambling. Horse racing evidently remains the sport of kings in the land of the chrysanthemum, for only the upper class attend the races, admission to the course being fixed at three dollars, a sum which probably represents many weeks' wages of the average workman.

"ENFORCEMENT."

It is urged, we observe, by a local contemporary, that "it was not at all worth the while of the *Mail* stating (*sic*) that the word 'enforced' was not really used by the Japanese newspapers with reference to the Treaties." That is a quaint kind of rejoinder. If it was not worth our while to make the correction, why was it originally worth the while of our contemporary, as well as of another local English journal, to call attention to the fact that such a word had been used? To accuse a man of employing a harsh expression, to invite the public to take the expression as an indication of his mood, and then to declare that it really is not worth his while to deny having employed any such expression, is a variety of logic to which folks in general are not accustomed. We are also accused of having made the correction merely because we saw "an opportunity to have a pick at our contemporaries." Our contemporaries are nothing to us. Our sole object in this matter is to correct a false impression from which mischievous consequences might ensue. All foreign journalists in Japan are more or less at

the mercy of their translators. When a newspaper finds that it has been misled by its translator, and that it has thus been betrayed into unjustly attributing to the Japanese an unfriendly disposition towards foreigners, we should imagine that its straightforward course would be to acknowledge that error and seek to correct the injustice. But that is not the way with some journalists.

THE KAGA YASHIKI THIEF.

It appears the dishonest cook who abstracted a large sum of money and several thousand yen worth of bonds from the bureau of Dr. Divers some time ago, and whose arrest was effected last month, has not yet been sentenced, fuller investigation of the details of his crime being necessary before bringing him up for final trial. The statement that he had been condemned to only ten months imprisonment came to us from a source which ought to have been eminently trustworthy, and accepting it with implicit confidence, we commented in strong terms on the inadequacy of such punishment. We, of course, withdrew our comments and express regrets for their injustice though since the man had not been tried, the strictures that we expressed now prove to have been without applicability to any tribunal. No one was libelled since no one was concerned.

THE RISE IN WAGES.

According to the *Mainichi*, the wages of artisans and labourers appear to have been raised in proportion to the prices of commodities, which rose considerably for a while, but now begin to show some signs of falling. Investigations show that the wages of work people in the capital have risen more than 30 per cent. since 1895. The following comparative table shows the differences between daily wages paid in November this year and in November of the year before last:—

Occupation.	Nov. 1897.	Nov. 1896.
Carpenter	70	40
Plasterer	80	60
Mason	80	50
Sawyer	70	60
Roofer	70	50
do (tile)	70	50
Bricklayer	60	40
Tatogu-shi (maker of doors, screens, etc.)	60	50
Mat maker	70	60
Paperer	75	60
Joiner	70	50
Cooper	40	25
Clog-maker	40	25
Show-maker, first class	1.20	.90

do third-class	1.00	.70

RELIANCE WHEELMEN'S SMOKER.

For the second time since their organization the Reliance Wheelmen of Yokohama have entertained the community right royally with a smoking concert of a more than usually high grade of merit. Some days before the concert came off, tickets—which could only be obtained on the personal invitation of a member—were at a premium. Consequently on Saturday evening the Hall was filled with a crowded and appreciative audience who appeared to thoroughly enjoy the good things—whether of song, music, recitation, or those pertaining to "the creature comforts," that were laid before them. The choral singing in the first half was exceptionally good, displaying to the full the care and attention that had been bestowed upon the training of the voices. The "side-talks" of the corner men were very up-to-date, the local topicalities being very acceptable, though at times the personalities were limned with a board-pointed brush. But the utmost good humor prevailed and the older the joke—in some instances—the better its reception. Of course, *encores* were the order of the evening from the beginning, but some performers were specially honoured. Mr. R. C. K. Johnson was recalled so heartily that he responded with a favourite of other days, "In Old Madrid"; the string quartette was so taking in its first selection that the performers had to return twice, when they gave the "Jesamine Polka." Then Mr. E. H. Morse's inimitable characterization as an Irish railway-ganger was applauded time and again: applause in which the "ball-pup" shared—and apparently also enjoyed. Lack of space precludes our noticing the concert at greater length, but we give the programme in full:—

PART I.

RELIANCE MINSTRELS.

Interlocutor H. K. A. Onderdonk.
 Tambos L. E. McChesney and H. Gunn.
 Bones F. M. Gowey and C. H. Bain.
 Chorus W. R. Matteson, M. L. Ellis, R. C. K. Johnson, I. J. Cohen, B. J. Jackson, and H. Goldman.

The Coon Overture M. M. Ellis.
 1.—Opening Chorus... "In the evening by the moonlight" Chorus.
 2.—"I'm happy, my baby's come to town" L. E. McChesney.
 3.—"We'll have a Jolly time" End Men and Chorus.

4.—Serenade B. J. Jackson.
 5.—"When Miss Maria Johnson married me" F. M. Gowey.
 6.—"Carry me back to Old Virginia" Chorus.
 7.—"A hot time in the Old Town" H. Gunn.
 8.—Medley Chorus.

PART II.

1.—Reliance Wheelmen March M. M. Ellis.
 2.—Recitation... "The Fireman's Wedding" F. L. Elliott.
 3.—Song... "The Old Brigade" R. C. K. Johnson.
 4.—Reliance String Quartette. "Andalusia" W. C. Vaughan, L. E. McChesney, M. L. Ellis, I. J. Cohen.

5.—Song... "Bowery Girl up to date" F. M. Gowey.
 6.—Recitation... "Flannigan to Finnigan" E. H. Morse.
 7.—Song... "No more Fancy Balls for me" B. J. Jackson.
 8.—Boxing Kay Smith, H. Gunn, M. L. Ellis, C. H. Bain.
 9.—Song... "What dy'e think of Houghnan?" L. E. McChesney.

Before concluding we cannot help extending our congratulations to the Club on their obtaining the services of such an accomplished pianist as Mr. M. M. Ellis, a new arrival. His accompaniments were perfect in every way, while the March of his special composing that introduced the second half was very spirited and excellently conceived. We hope to hear him again very soon.

Says the *Daily Press* of November 29th:—The passenger list of the P. & O. steamer *Mirapora* contains the names of six Russians, who, we hear, have come out to join the Chinese Customs Service. This, if correct, may be taken as a sign of the times.

JAPAN'S ARMAMENTS.

THE discussion now going on with reference to the expansion of Japan's armaments seems to be vitiated by a certain confusion of ideas between the feasibility and the utility of the programme. It will have been perceived, of course, that there is no difference of opinion as to the necessity of increasing the Navy up to the full limits of the Government's scheme. All parties are agreed upon that point. The question centres solely upon the Army. Should the Army be doubled, or is an increase of fifty per cent. sufficient? That is the only matter in dispute, and it is there that the confusion of which we speak presents itself. The opponents of military increment appear to question, not the possibility of using an army of such dimensions as the Government's programme contemplates, but the possibility of utilizing any considerable army at all. In support of their argument they point to the fact that France, despite of her immense military forces, was unable to make any serious impression on China in the "state of reprisals" twelve years ago, and that Germany, though she possesses a colossal army, has been obliged to rely on her Navy for the Kiao-chow *coup*. We confess that we do not clearly understand this contention, and may, therefore, be misrepresenting it. But if such illustrations have any significance, it appears to us that they point to a conclusion diametrically opposed to that deduced from them by some Japanese writers. There can be very little doubt that had France been able to place thirty or forty thousand men in the Far Eastern field in 1884, she would now be in possession of Formosa and of a materially "rectified" Indo-Chinese frontier. She made nothing of the war—nothing, we mean, in comparison with what a Power like France ought to have achieved—simply because she had no troops available for land operations. At sea she was absolute mistress of the situation. The Pei-yang Squadron, nearly just as powerful then as it was when Admiral ITO entrapped it into a combat ten years later, lay carefully *perdu* in Wei-hai-wei and Port Arthur, contributing nothing to the defence of the country unless, indeed, we place to its account the occasional disturbance that its potentialities produced in Admiral COURBET'S plans. In short, France achieved nothing tangible or memorable, not because there was no occasion for her to use both arms, but because the occasion demanded the use of both and she was unable to use more than one. As for Germany at Kiao-chow, it is true that the affair has hitherto involved ships only, but that is precisely where the weak point of the situation exists for both sides. If China possessed an army of even the most moderate capacity, the Germans could not have essayed such a *coup* as the invasion of her empire with a

band of six hundred men. The fact is that the weakness of Occidental Powers for belligerent purposes in the Orient consists in the almost insuperable difficulty of conducting military operations at such an immense distance from their prime base. France and England, uniting their strength in 1860, managed to land twenty thousand men at Peitang for a campaign against Taku, Tientsin and Peking. England supplied nearly two-thirds of the force, drawing upon her Indian Army for the purpose, and England also supplied the greater part of the transport. The dimensions of that effort furnished a tolerably accurate gauge of the offensive capacities of Occidental States in the Far East. What such experiences teach Japan is, not that she has no need of a powerful army, but that her situation gives her an opportunity to be strong where her competitors are weak. Were her organization such that she could land an army of a hundred thousand men at any point on the continent of eastern Asia, and maintain it at that standard throughout the course of a campaign, she would be mistress of the situation. No other Power could compete with her. We do not here take into account the question of preserving maritime communications. That is a necessity vital to the safe prosecution of all over-sea enterprises, whatever be the numerical strength of the land force employed. Our point is that if Japan aims at exercising a really potent influence over the destinies of the Far East, she should have an army of a hundred thousand men ready for use beyond her own borders, and that ability to launch such a force in any given direction at brief notice would give her an immense advantage in all complications at present conceivable. On the other hand, any greater effort not only seems superfluous but would overtax her capacity. To transport a hundred thousand men to the opposite continent and keep them supplied with munitions, reliefs and provisions would require a fleet of at least eighty steamers. It is not impossible, at any rate it will not be impossible a few years hence, for Japan to get together such a fleet. But suppose that the expeditionary force were a hundred and fifty thousand strong, and that a hundred and twenty transports were needed. Where are they to be obtained? There are no signs at present of any preparations to provide them. It appears, in short, that Japan is organizing an army in excess of her means to utilize it. For home defence, including the garrisoning of Formosa and Yezo, an army of a hundred and twenty thousand men would be amply sufficient. Thus, allowing eighty thousand men as a casualty reserve for the two armies, the army of offense and the army of defence, the conclusion is that if Japan's programme aimed at a war footing of three hundred thousand men, or three hundred and fifty

thousand at most, she would be amply prepared for all contingencies. Her present programme, however, is four hundred and sixty thousand.

Of course, no discussion of this character would have any value unless it included the question of finance. Can Japan afford a naval and military equipment of the dimensions now contemplated? The difficulty in answering such a question is to find a basis of calculation. It will not do merely to say that Japan spends so many million *yen* a year, and England so many sovereigns, or France so many francs. We must know something about the spending capacities of the various Powers before we compare the amounts spent by them. There are two ways of looking at the problem. One is to consider what ratio the military and naval outlays bear to the income of the State; another is to examine the cost per head of population. According to the Government's estimates, the annual outlay on account of the Army when it is raised to the contemplated strength of twelve Divisions and the Imperial Guards, will be 27 million *yen*, in round numbers; and the annual outlay on account of the Navy (when its establishment is 67 ships with an aggregate displacement of 258,300 tons, 11 torpedo-catchers and 115 torpedo-boats) will be 16 millions. To the latter figure, however, we must add 13 millions as a maintenance fund, so that the total naval expenditures become 29 millions, and the outlays on account of the two services aggregate 56 millions. The corresponding revenue of the State—that is to say, the revenue that will be available, on the present system of taxation, when the armaments expansion programme is consummated—will be at least 160 millions. Hence we find that the total expenditures for the two services will be $\frac{56}{160}$ of the State income; the Army expenditure being $\frac{27}{160}$, and the Naval $\frac{29}{160}$. Now the expenditure on account of the English army is 18 millions sterling, in round numbers, and the expenditure on account of the Navy, 19 millions, the State revenue being 100 millions, approximately. Hence the expenditures for the two services are $\frac{37}{100}$ of the State revenue, the Army expenditure being $\frac{18}{100}$, and the Naval, $\frac{19}{100}$. This comparison does not show any startling contrast. The advantage is on Japan's side. It will be observed, too, that as between the Army and Navy, Japan spends proportionately more on the latter service than Great Britain does. We need scarcely point out, of course, that we are dealing with ratios only. If a direct comparison be instituted, it appears that England spends 6½ *yen* upon her Navy and nearly 7 *yen* on her Army for every one *yen* that Japan contemplates spending. Turning, now, to the second method of comparison, it will be seen that Japan's naval and military expenditures amount to 1.33 *yen*

per head of her population, and Great Britain's to 9.75 *yen*. Each inhabitant of the United Kingdom has to pay a little more than seven times as much on account of military and naval expenditure as each inhabitant of the Japanese empire. Is that a proper ratio? To answer intelligently we must know something about the comparative wealth of the two countries. In England's case information on that point is easily accessible. We know that the accumulated wealth of the nation may be set down as nine thousand millions sterling, without much risk of error. But in Japan minute and trustworthy statistics are still difficult to obtain. The latest estimate formed by competent calculators gives ten thousand million *yen* as the sum of the national wealth. We are disposed to think that the figure is below the truth. It is obtained by assessing the value of the agricultural and building land at eight thousand million *yen*, and adding two thousand millions on account of all the remaining property of the people. For the moment, however, we must be content with the estimate as the closest approximation immediately procurable. Our comparative figures then become nine thousand million pounds sterling for the United Kingdom and one thousand millions sterling for Japan. In other words, a British subject can afford to spend nine *yen* for every one *yen* that a Japanese subject spends. If that be a correct contrast, it follows that the Japanese subject over-taxes his financial capacities when he devotes to his Army and Navy one *yen* for every seven *yen* devoted by a British subject to the same purpose. The discrepancy is not great, however.

We may refer, *en passant*, to the empirical notion which has long prevailed among foreigners residing in Japan that a *yen* in this country is the equivalent of a sovereign in England. Our statistics show, it will be observed, that the comparison is remarkably accurate. The accumulated wealth of the United Kingdom represents 237 pounds sterling per head of population; the accumulated wealth of Japan, 238 *yen* per head.

There is another point calling for notice in connexion with this problem. It is that whereas immense sums of floating capital are always available in Great Britain for the conduct of a war, Japan's resources in that respect are comparatively meagre. Fortunately when the war of 1894 broke out, she had in the Treasury accumulations of surplus revenue aggregating more than thirty millions of *yen*. But she is threatened now with deficits rather than surpluses, and it is important to consider whether, in the event of a war, she could hope to raise a domestic loan with anything like the ease that marked her last transaction of that nature. Her people will not put up any money now on account of the Railway and Public Undertakings Loans that

ought to be floated during the current year. A large fleet and a great army would be useless affairs without money to support them. Some retrenchment in the case of the Army would appear desirable, for a small army and a full purse are incomparably more efficient than a big army and empty coffers.

THE COLONIES AND THE TREATIES.

WE observe that the question of the British Colonies and the Revised Treaties has been taken up by a newspaper of this settlement, which writes as follows:—

Article 19th, states that the stipulations of the British treaty shall be applicable to all British Colonies and possessions, excepting "India, the Dominion of Canada, the Cape, Natal, and Tasmania, Australia, and New Zealand." Some trouble having been experienced by the mother country in consequence of the Colonies having responsible government, claiming a free hand to deal with Oriental, more particularly in respect to Chinese immigrants, however conflicting Colonial action might be with Imperial policy in regard to China, the framers of the treaty concluded to leave to the Colonies mentioned the option of declaring whether they would agree to bind themselves by the stipulations generally contained in the British treaty, and two years from the time of the exchange of ratifications, was the period fixed within which the necessary declaration had to be made. We believe we are correct in stating that not one of the Colonies mentioned accepted the opportunity offered, as apart from other considerations that, if they did so, they might find themselves hampered in resorting to legislation to limit or exclude altogether the admission of Japanese in common with Chinese who perhaps would be found availing themselves of the advantages which the Australian group of Colonies offer to emigrants from the East who might flock in in such numbers, as would be considered to be unadvisable to admit. Had such an option been given to British residents in Japan,—for quite a number of cogent reasons,—of declining to accept the in several respects objectionable instrument which the Japanese press delights in telling us will be "enforced," they would gladly have availed themselves of the opportunity of rejection.

The Japanese seem to have taken umbrage at the Colonies mentioned holding themselves aloof, and as far as indicated, appear to desire to vent their spite on any Colonist presuming to make application for the granting of letters patent to protect from piracy any invention deemed to be sufficiently valuable to require it. Already we know of one refusal on the above ground, and there may perhaps have been more for aught we know to the contrary.

Turning to the first Article of the British treaty, we find, that British and Japanese subjects "shall have full liberty to enter, travel, and reside in any part of the dominions of the other contracting Party, and shall enjoy full and perfect protection for their persons and property." Now because it has not pleased the Governments of the Colonies previously adverted to, to accept the provisions of the treaty, the position is taken up, which we hold to be untenable, that the rights conceded by it to British subjects in general, shall be withheld if any of them chance to reside in the Colonies mentioned, and we fore-see that in attempting such distinction much trouble will ensue, and it serves no rational purpose whatsoever. It is surely the merest folly to discriminate against individual Colonists, as though it could make any possible difference whatsoever as to a British subject's nationality by the place he happens to reside in. He cannot be deprived of his birth-right by any such flimsy plea, and he surely cannot be held to be personally responsible for the act or default of a Colonial Government, any more than for the conduct of the mother country.

It appears to us that the Japanese Government is exceedingly ill-advised to raise the petty-fogging plea which has been advanced in bar of the granting a Canadian's application for a patent, for which, as a British subject, he has a right to have awarded him, should no objection be found to his application. Are we to understand by the present complexion of this affair, that British subjects coming from the Colonies have no treaty rights whatsoever, and that such persons are to be relegated to the position of strangers from any country which has no treaty with Japan? for that appears to be the predicament they will find themselves to be placed in. Is it likely that trade will be increased between Japan and the Colonies referred to by the pursuit of so paltry a policy of exclusion. If the restriction is persisted in, it will be easily evaded, which alone furnishes a forcible argument against its adoption. It most assuredly is of infinitely more importance to Japan that its people should have freedom of access to those Colonies, and be permitted to reside

and trade in them, than the new fangled treatment, is to the Colonists who when they discover that such a narrow and altogether illiberal spirit is displayed in interpreting and applying the provisions of the treaty, will most likely be moved to make reprisals in the shape of restriction on the immigration of Japanese subjects, and the levying of increased duties on imports from this country.

These paragraphs contain some errors of fact and several strange theories. In the first place, it is incorrect to say that none of the British colonies has come into the new arrangement. Two of the Australasian Colonies have done so. In the second place, it is not true that the Colonies are deterred by a fear lest they should be "hampered in resorting to legislation to limit or exclude altogether the admission of Japanese in common with Chinese" who might flock into the colonial territories in inconvenient numbers. That difficulty has no existence. Japan has treated the question with liberality. In concluding treaties with the colonies, no obstacle is offered to the insertion of a clause reserving to each of the contracting parties the legislative right of limiting or forbidding the immigration of labourers or artisans. Such a provision appears in the treaty with the United States and in the treaties with the two Australasian Colonies referred to above. Under the circumstances, we are unable to understand why all the Colonies do not subscribe to the Revised Treaties. The reason of their hesitation is not discernible.

As to Japan's attitude, very little reflection is needed to show that the charges brought against her in the article quoted above have no basis of fact. It is not Japan that adopts an exclusive policy; it is the colonies themselves. They refrain from establishing with her the same friendly relations that their mother-country and the other great Powers of Europe have established. Is it fair then, to accuse her of a petty-fogging and illiberal spirit when the difficulty is wholly on the side of the colonies and not at all on hers? Is it reasonable that she should be expected to extend to the colonists privileges for the enjoyment of which they decline to qualify themselves? The writer of the paragraphs reproduced above declares Japan's position to be untenable if she contends that the privileges conceded by the Treaty to British subjects in general do not extend, *ipso facto*, to inhabitants of British colonies. He apparently forgets, though he himself states at the outset of his article, that this discrimination was made by the British Government itself, not by Japan. Japan was perfectly willing that the Treaty should be operative for the whole British empire. It was by the wish of the British negotiators that the colonies were excluded. England does not undertake, and, indeed, has not the power, to make commercial treaties on account of her colonies. That is a right reserved for their own independent exercise. There is not the smallest obstacle to their joining the States that have concluded revised treaties with Japan. They can do so without forfeiting any part of

their legislative competence to restrict or suspend Asiatic immigration. But so long as they are explicitly excluded from the scope of the treaty, and so long as they refrain from any steps to bring themselves within its scope, no one can reasonably contend that they are entitled to its privileges. It is quite true that to discriminate against them altogether is practically impossible, even if it were desired or desirable. For all ordinary purposes of residence or travel in this country after the abolition of the settlements and of Consular Jurisdiction, no effective scrutiny can be made into the nationality of any one coming from over-sea. The country will be open to all strangers alike. But imports from British colonies that have not entered the treaty circle will, of course, be treated as imports from a non-treaty country, and wherever official recognition of nationality is necessary for the enjoyment of a treaty privilege, such privilege will not be enjoyable by a non-treaty national.

Among privileges of the latter nature the registration of patents and trade-marks is included. It is essentially a reciprocal concession. Japan promises to protect the patents and trade-marks of Western nations which, in turn, engage to give similar protection to Japanese trade-marks and patents. Manifestly if a British Colony has not entered into any engagement of that nature *vis-à-vis* Japan, Japan can not be expected to treat the colonists exactly as she treats the subjects or citizens of States that have entered into such engagements. It is really very silly to accuse her of "venting her spite" on the colonists because she discriminates against them under these circumstances. A Japanese could not register a trade-mark or take out a patent in Canada. Why should a Canadian inventor be entitled to do so in Japan?

We should probably convey a false impression if we dismissed this subject of patents without repeating what we stated several months ago, namely, that the privilege of taking out a patent in Japan is of extremely limited value to foreigners at present. The Japanese Law of Patents and Trade Marks was framed entirely for Japanese subjects. At the time of its enactment, there was no thought of extending its scope to foreigners. The result in that, pending some alteration of its provisions, the Law can not be invoked to secure protection for a patent which has been already registered in a foreign country. The framers of the Law, thinking solely of patents to be taken out by Japanese subjects, inserted a provision that no patent which had already been registered in a foreign country would receive recognition in Japan. and this provision, the original purpose of which was to protect foreign patents against plagiarism by Japanese, now

operates to prevent foreign patent-holders from registering their patents in Japan. It is a curious and unfortunate position. Much disappointment and misunderstanding will certainly result, for the average foreigner will count it little short of a farce that unless he takes out his patent in Japan first of all, he can not obtain protection for it. But here again the fault is not Japan's. She has merely yielded to the premature pressure put on her by European Powers. They did not wait until her law could be revised so as to adopt it for the full protection of foreign patents, and the result is an equivocal situation. Of course the amendment of the law is only a question of time. We believe that the revised draft is already complete. But, on the whole, it might have been better to await until revision was effected before applying the law to conditions not contemplated by its framers.

COUNT MATSUKATA'S MEMO-RANDUM.

Count Matsukata has delivered a long reply to a deputation of the Merchants' and Manufacturers' Association which waited on him with reference to the financial situation. The Minister having reduced his views to writing, it is possible to lay them, *in extenso*, before our readers. We proceed to do so, at the same time acknowledging some indebtedness to the *Japan Times*, with regard to the translation of the first part of the Memorandum:—

There exists between social phenomena, especially economical, a relation so close that to separate any one of them and examine it independently is likely to lead to deceptive results. Hence, in examining the economic condition of Japan, it is necessary to take account of the vicissitudes of the public finance; above all in view of the fact that the *post bellum* undertakings of the Government constitute one of the causes of the present economic disturbance.

As the result of the war of 1894-5, which was an affair of unprecedented magnitude for this country, the public expenditure, which had hitherto been about 80,000,000 *yen*, increased to 190,000,000 *yen* in the 29th fiscal year (1895-96), and in the next year to 250,000,000 *yen*. Moreover, in order to meet the exigencies of the war, a sum of over 130,000,000 *yen* was taken from the floating capital of the nation in the form of a War Loan, and devoted to purposes other than productive, the inevitable result being that the purchasing power of the masses was suddenly increased. On the one hand, in order to meet the increase in the ordinary expenditure of the Government, various taxation measures were introduced in the ninth session of the Diet, namely, the Business Tax (estimated to yield 7,500,000 *yen*), the Leaf Tobacco Monopoly (10,000,000 *yen*), the Registration Tax (6,000,000 *yen*), and the *Saki* Tax Amendment (9,000,000 *yen*). On the other hand, large items of extraordinary expenditure were required for the manufacture of arms, am munition, and warships, the construction of barracks, the erection of offices and stores connected with the Tobacco Monopoly, the building of Naval Depot Offices, and so forth. These items footed up to such a sum that, after employing all the money raised by the War Loan, it was necessary to bring over a part of the Indemnity. Even then a deficiency still existed. The extraordinary expenditures actually exceeded the ordinary, and, in addition, the outlays on account of Formosa proved much larger than had been anticipated. The money re-

quired up to the time when the island was placed under civil administration in March, 1897, reached over 30,000,000 *yen*. The sum needed for the 29th fiscal year (1896-97) was 22,000,000 *yen*, while that of the current fiscal year is put at 24,000,000 *yen*. Then again, the fund for the Encouragement of Navigation, originally estimated at about 1,000,000 *yen*, had to be raised to over 6,000,000 *yen*. Thus it has been necessary for the Government to provide appropriations much larger than those originally fixed.

In presenting the Budget for the current year to the Diet in its tenth session, the necessity of providing a large extraordinary revenue to meet the expenditures caused much anxiety. The plans that had already been settled could not be hastily altered, and only a very brief interval had elapsed since my assumption of office. Under these circumstances, I considered that the heavy responsibilities of my office would best be discharged by pursuing a policy of gradual adjustment. What caused special anxiety at that time was the raising of loans. The amount of loans that had to be floated in order to meet the requirements of the increased armaments and other *post bellum* measures, was 8,000,000 *yen* in the 29th fiscal year (1896-7), 60,000,000 *yen* in the 30th fiscal year (1897-8), and 49,000,000 *yen* in the 31st fiscal year (1898-9). Whether the resources of the people would permit the raising of such large sums, was a point very difficult to determine. The only thing that afforded some solace was the fact that the sums to be raised would show a gradual decrease after the 31st fiscal year, and would cease altogether with the 36th year (1903-4). Persuaded, then, that no course offered except to maintain the *post bellum* schemes of finance, despite the addition they involved to the pressing burden of the nation, I adopted that policy. But the action of the Diet in the tenth session led to a decrease in the revenue, namely, 1,300,000 *yen* by the amendment of the Registration Tax, and some 2,300,000 *yen* by the abolition of contributions to the warship construction fund by Government officials. Moreover, the actual yield from the Business Tax shows a decrease of 2,000,000 *yen* as compared with the estimate. Similarly, the income from the tobacco monopoly may show a decrease of over 3,000,000 *yen*, because, owing to the delay in putting into operation the new Tariff, the importation of foreign manufactured tobacco tends to increase. Thus, while increased outlay is necessary on account of Formosa and the Encouragement Bounties, the revenue shows considerable reduction. Farther, owing to the rise in the prices of commodities, any considerable reduction of the administrative expenses is not possible. In short, the management of the public finances at the present juncture is no light task, whoever be placed in control of them.

Shall we, then, alter the *post bellum* programme which received the universal consent of the nation in the ninth session of the Diet, and shall we adopt the policy of reducing the military expansion? This question was undoubtedly worthy of serious consideration before the scheme of expansion was approved by the Diet in its ninth session. But to introduce a change in the national policy at the present juncture not only would be prejudicial to the credit of the country, but is also inadmissible under the circumstances of the time. Even supposing that a reduction of the scheme of military expansion were undertaken, the economy thereby effected would be found to be smaller than is imagined, the greater part of the programme having been already carried out.

How, then, is the discrepancy between the expenditure and income of the State to be adjusted? No one that has the real and permanent interest of the country at heart will approve the adoption of a temporizing policy, such, for instance, as the appropriation of the fund set apart for purposes of armaments expansion, or the postponement of the period of the redemption of loans, or the raising of a new loan. Of these expedients, that of meeting the deficiency by borrowed money is particularly objectionable, as its effect would be to aggravate

the origin of the malady. Its immediate result might possibly be to alleviate the suffering, but a relapse to the old state would be inevitable, especially as the floating of a loan in the present condition of the home and foreign markets seems to offer little prospects of success. It might not be altogether impossible to obtain the required amount, if the loan were issued at a low rate; but the result of withdrawing a further sum from the nation's capital fund would impair the progress of productive undertakings, and would at all events be followed by a sudden depreciation of even the best securities, thereby increasing still more the embarrassment now experienced by a section of the industrial world.

Under these circumstances, it is beyond dispute that the only course to be pursued is to increase the taxes. If recourse were had to the creation of new taxes, it would take some time before their incidence could be equitably arranged, and moreover, the multiplication of taxes producing small yields not only causes confusion but is disadvantageous to both Government and people. The sources on which we can rely for the future increase of income are only the Land Tax and the *Saké* Tax. Not only is the Land Tax the principal source of revenue in this country, but also, there is reason to believe that the price of rice will be maintained at about 10 *yen* per *toku* as the result of the adoption of the gold standard. It is but reasonable, therefore, that a certain increase should be made in the amount of agrarian taxation. As to the *Saké* Tax, an increase was only recently effected, but since the burden does not fall on the shoulders of those who pay the tax, it cannot be asserted that they are unable to bear a further increase. Besides, the increased income of the lower classes in consequence of the rise of various industries and undertakings has been followed by an increased consumption of *saké*. The quantity brewed this year, for instance, shows an increase over that of last year, notwithstanding the fact that the incidence of taxation was raised since 1896. It therefore seems justifiable to effect a further increase in this tax, at the same time taking steps to exercise proper checks upon the brewing of liquor for family consumption, and to correct any other circumstances that tend to decrease the demand for *saké*. It has to be borne in mind, too, that the increase of these taxes will have the effect of reconverting into capital the money now distributed among the lower classes, and also of checking the growth of luxurious habits of living. A further result of the proposed taxation will be to avert any increase of burdens upon those engaged in productive industries. I believe that these measures will prove of no small benefit to the national economy. If the tax-payers sacrifice their self-interest for the sake of the permanent good of the country, and if the Diet be impartial enough to give consent to these taxation measures, an addition of about 20,000,000 *yen* will easily be made to the Revenue. If, also, the revision of the Treaties be carried out as anticipated, it will be practicable to put the new Tariff into operation from July, 1898, the consequence of which will be an addition of 7 or 8 million *yen* to the Revenue, and by effecting some improvement in the method of levying the Business Tax and managing the Tobacco Monopoly, while, at the same time, the tax paying capacities of the people improve, a general augmentation of the public revenue may be not unreasonably expected. Even the adjustment of household economy requires time: how much more must that be the case with regard to the reform of national finance? If both Government and people be united, if no errors of procedure be made, if the difficulties of the situation be patiently encountered, and if the exigencies of the time be recognized, there is no reason to fear that the *post-bellum* measures can not be consummated though the effort will be severe, especially since, unless unforeseen emergencies arise, the volume of the extraordinary expenditures will gradually decrease, and the difficulty experienced in drawing up yearly estimates will proportionately diminish. If it be alleged that the people's resources are not adequate to bear an increased burden of 20,000,000 *yen*, the question would

be different. But if not, I am convinced that the best course under the existing circumstances is an increase of taxation.

This expansion of the *post-bellum* finance has led to an increase of various works under the Government, and these, supplemented by a general development of private industries, have produced great disturbance in the economic condition of the country. One of the most conspicuous consequences has been a sudden and extraordinary increase of the purchasing power of the people. This circumstance, together with the fall of silver, has brought about an unprecedented rise of prices. Believing that such an abnormal rise of prices was injurious to a healthy and permanent economic development of the country, the Government carried out the monetary reform, so that the national finances might be placed on a sound basis. Since then, there have been constantly accentuated fluctuations in the price of silver. It dropped at one time from 29 pence as far as 23 pence per ounce, and rose again to 27 pence. Although these fluctuations have not ceased, our foreign exchanges have remained almost invariable since the coming into operation of the new monetary system. As a consequence, almost unprecedented activity is noticeable in the silk trade. It was urged by the opponents of the monetary reform that under the new system our silk trade would be stolen from us by China; but the point of chief importance in foreign trade being stability of exchange, there does not appear to be any sign of our silk trade's being invaded by China. Altogether our export and import trade has made rapid progress. It is true that imports continue to be in excess, but it must be borne in mind that the excess is in a large measure caused by the purchase of machinery and raw material, which will in course of time materially contribute to increased production and export. There is, therefore, nothing in the condition of our foreign trade to cause any anxiety. The depreciation of silver has caused more or less disturbance in our export of cotton yarns to China and other silver countries, but the disturbance will subside with the cessation of exchange fluctuations (*kawase hendo no shisumaru to tomo ni kuwafuku subashi*). Not only that, but since we shall be able to buy raw material cheaply from silver-using countries, our temporary loss will be compensated. Already, indeed, there are signs that trade with these countries is beginning to recover. As to the redemption of silver *yen*, no large sums have been presented for exchange such as were foretold by some excited persons. Not only has the amount exchanged not yet reached the estimated limit, but there is even a tendency toward the coming in of foreign gold.

It is a matter of public knowledge that more or less inconvenience is felt at present in the field of national economy, the prices of commodities having been forced up by a sudden increase of the people's purchasing power, the prices of shares having depreciated owing to the fever for new enterprises, and the demand for capital having produced a tightness in the money market. Three remedies only suggest themselves in such a situation. They are:—

- (1) To refrain from interference and leave matters to right themselves.
- (2) To raise the rate of interest and reduce the volume of the currency.
- (3) To increase the volume of the currency and satisfy the demand for capital.

It is essential that economical plans should not be based merely on theory. One of the above three courses has to be selected and vigorously pursued. But before fixing upon a future policy in a matter of such great importance, we have to consider the causes that have brought about the present state of affairs; we have to examine the state of society; and we have to take care that we are in touch with the time. The origin of the present malady seems to consist in:—

- (1) An increase of the people's purchasing power.
- (2) A sudden development of industrial fever.

- (3) Deficiency of capital for various enterprises.

These seem to be the only causes. It follows, therefore, that the objects upon which attention must be fixed are the utmost possible reduction of all unproductive expenditures, apart from the outlay on account of armaments which are essential to the very existence of the State; the prosecution of efforts on all sides to restrain purely speculative enterprises; the provision of capital to meet the needs of profitable undertakings; the adoption of measures such as shall avert undeserved misfortune from necessary enterprises that have already been established or are on the point of being established, to say nothing of new schemes; and the protection of the general credit against disturbance. To consummate these aims we have to ask for the co-operation of the Diet in several matters of which the following are the most important:—

The work of revising the Treaties with France and Austria-Hungary has made rapid progress and the exchange of ratifications may take place during the year. That being the case, it is necessary that the Diet should lose no time in giving its assent to the new Codes which are essential to the operation of the Treaties in 1899. Without that assent, the new Treaties can not go into operation; a result that would be humiliating to the country in the eyes of the world. Not that alone, but if the Treaties become operative, the new Tariff also will go into force, as already explained, bringing an increase of public revenue; the present extravagant expenditures of the people will receive some check, and—which will appear much more important to many people—facilities for the inflow of foreign capital will be afforded, to the great profit of the country. It is a matter of course that foreign capitalists should hesitate to invest any large amount of money in Japanese industries under treaties that impose so many restrictions as the present do. A market was indeed found abroad for a considerable quantity of Loan Bonds, after the introduction of the gold standard; and even before the Revised Treaties go into operation there will be more or less demand in foreign markets for Government Bonds and for the shares of trustworthy companies, especially those of the Industrial Bank, which give their holder a right to a part of the profits. Still, so long as the present Treaties remain in force, foreign capital is not likely to come in large quantities. It is thus plain that the Diet's consent to the remaining parts of the Codes in its next session is almost an essential step towards supplying the future demand for capital. Some people affirm that the Government's credit should be pledged for the purpose of bringing in a large sum of foreign capital, but such precipitate devices, conceived in the interest of individuals, are to be avoided as much as possible; for it must not be forgotten that they involve a serious risk of causing economical disturbance, and that foreign capital, unless wise measures be adopted for introducing it, may produce effects the reverse of beneficial. Briefly speaking, unless an occasion offers for obtaining foreign capital in a suitable way and employing it in productive enterprises, its introduction may produce incalculable disturbance, may bring about a panic, and may simply have the effect of augmenting the borrowers' burdens without contributing anything to their advantage. If order be introduced into the State finances, if the national economy be firmly based, if credit be sound and if the fiscal system be duly arranged, capital will come to us without our going in search of it.

In the next place, were a redundant currency responsible for the appreciation of the prices of commodities, some reduction of the volume would doubtless be necessary. Now, speaking in terms of the new gold coin for convenience of comparison, the volume of hard money in circulation in June 1890 was over 330 million *yen*, whereas the volume in circulation in June of the current year was about 300 millions. Again, the paper money of various kinds in circulation at the end of 1894 aggregated 185 million *yen*, and at the end of last month (Nov.)

it aggregated 215 millions. Thus there has been no marked expansion of volume. Even if there had been more or less increase, it certainly could not be held entirely responsible for the appreciation of prices, in view of the augmented demand for currency produced by industrial development, and of the fact that no small quantity of coin has gone to Korea, to China, and to Formosa. The only trouble is that the ownership of the currency has changed. It has gone out of the hands of productive manufacturers and passed into the possession of the labouring classes—no less than eighty thousand men are employed upon one branch of works—and of the consuming classes. To collect it and bring it within reach of productive enterprises is of prime importance at present. For that purpose, it is proposed to issue public bonds of small denominations, so as, on the one hand, to increase the supply of capital available for industrial purposes, and, on the other, to promote a spirit of thrift among the people. Thus not only will relief be afforded to the present stringency of the money market, which is due not so much to the want of capital as to its defective circulation, but the purchasing power of the labouring classes will be somewhat diminished and the interests of the producing classes promoted.

Nothing conduces so much to economic progress as credit and confidence. At present, however, issues of convertible notes in excess of the legal limit has become an ordinary occurrence. Business men live in constant apprehension lest the Bank of Japan should raise its rate of interest, a state of affairs very far from being conducive to the development of enterprises the maintenance of which presents any difficulties. The reason that a necessity arises for thus exceeding the ordinary limits is that the point fixed by the present Convertible Note Regulations, namely 85 million *yen*, is too low, especially in view of the fact that large quantities of cheap money are needed for the purpose of foreign bills of exchange. It consequently appears necessary to effect some amendment of the present Convertible Bank Note Regulations.

All the above projects call for the enactment of new laws or the revision of those now in force, and can not, therefore, be carried out without the co-operation of the Diet. If, on the other hand, that co-operation be obtained, I believe that the condition of the national economy will be greatly improved and the present embarrassments removed. If may possibly be questioned whether this programme is not inspired by a desire to increase the volume of the currency. By no means. Is it to be supposed that the error would be committed of needlessly swelling the currency and thus producing an appreciation of the price of commodities? This point was elaborated more than once in connexion with the change of the monetary standard. It is governed by the same considerations that forbid as highly injurious such proceedings as the sudden introduction of a large quantity of foreign capital or the investment of money in vast enterprises without making any inquiry into their nature or soundness. It is sufficient to promote profitable enterprises and to provide necessary capital. I can not possibly agree with those that advocate an increase of the volume of the currency. Nay more, I consider that every effort should be made to restrain extravagant enterprises and to maintain sound and profitable undertakings, and that nothing is more to be avoided than the production of a new access of industrial fever by suddenly augmenting the circulation. At the same time, I am fully sensible of the great injury that may be caused by running to the other extreme of contraction, and thus causing the failure of profitable enterprises and destroying credit. It is necessary to avoid both extremes, that of restraint and that of impulse, and to strive after the happy mean.

Finally, there is one point demanding close attention. This is a time of demand. Care is therefore taken that the resources of supply shall not fall behind. The fact that machinery and raw materials are being vigorously imported is

well known. But demand will gradually grow less hereafter, and if producers, carried away by the prosperity of the moment, take no precautions and fail to reduce supply in due proportion, they may be overtaken by embarrassment greater than that now suffered by one class of industrials owing to the decline in the market price of shares. It is most desirable that manufacturers and bankers should unite in adopting precautionary measures, so as to guard against the evil of excessive supply. For the purpose of averting that great calamity, leading business men should agree to subject to the severest scrutiny all new projects, and should be content to devote their strength to the consummation of such undertakings only as can be certainly trusted to mature. There may be cases at present in which the temporary suspension of projects involves more or less difficulty; but to shrink back to-day is to stretch out to-morrow, whereas to advance recklessly now may mean complete ruin hereafter. Arguments of this kind may perhaps be called inconsequential, since they have no connexion with any of the three propositions advanced above. But to be guided by mere rules, to attach prime importance to quibbles of irresponsible controversy, to apply moribund principles to living economical society with all its changing phases, is not merely to stultify oneself but also to incur the risk of working grievous injury. Thus, though the general policy of the Government is positive, it will, at the same time, be an object to restrain anything hurtful, to encourage everything profitable, above all and before all to prevent failures, and to promote general economic progress. It must not be forgotten that this is a time demanding the sacrifice of selfish considerations and personal aims, the circumspect avoidance of rash enterprise and steady advance in safe directions.

PROPOSED ADJUSTMENT OF FINANCES.

The following essay was presented to the united Chambers of Commerce of Japan at their last meeting:—

The expenditures for the administration of our country after the war of the 27th and 28th years of *Meiji* increased very considerably. In the 28th year of *Meiji* (1895), the gross expenditures did not exceed 89 million *yen*, but in the 29th year the amount rose to 190 millions and by the 30th year to the enormous sum of 240 millions. The expenses for the 31st year have not yet been accurately ascertained, but they are estimated at no less than 230 million *yen*. Under these circumstances it is alleged that a deficit in revenue of several tens of millions can be made up only by resorting to increased taxation. Should the question be asked how a successful war with a foreign Power could have brought about such an unexpected increase of expenditures for administration, it must be answered by the statement that the scheme of *post bellum* armaments expansion is the direct cause of the augmentation of expenditure. The expansion may be indispensable, but the question of the period during which it can be carried out has to be considered. The most important *post bellum* undertaking should be to strengthen the national resources exhausted by the war; the question of armament expansion being of secondary importance. Unfortunately, however, the various schemes adopted by the Government have reversed this order of things. We gained a splendid victory, but now find ourselves destitute of sufficient means to carry on the administration. We obtained 300 million *yen* indemnity, yet the national finances are still in a state of disorganisation, and the business community is fast sinking into a grievous condition. All this must be attributed to the ill-advised policy of the Government. Some persons are disposed to entertain the notion that since the greater portion of the cost of the expansion of armaments is to be supplied by the indemnity, the scheme has no connection with the vicissitudes of national resources. Such a notion must be regarded as resulting from ignorance of the general course of events; inasmuch as the financial resources of our country have not been increased by the late war, but decreased. The public is aware that the actual outlay for war expenses exceeded 200 million *yen*, but the losses indirectly sustained by the people in connection with the war were incalculably greater. For instance, a large number of young men having been sent out of the country to serve as soldiers and army coolies, the productive power of the nation was considerably decreased, while various domestic manufactures were utterly neglected in order to supply stores for the war, and increase of imports was the inevitable result. If the losses arising from these circumstances were calculated, the amount would be far larger than is imagined. The injuries thus sustained remain still unremedied. If before providing a remedy for these injuries the whole amount of the indemnity is appropriated to unproductive expenditure for the expansion of armaments, when can we expect to see the national resources consolidated? There is a natural growth in the development of national strength, and it is necessary that the amount of expenditure for administration should correspond with this growth of national strength. The sudden augmentation of expenditure in the 29th year of *Meiji* to double the amount of the previous year was a serious blunder in the administration of the country. The measure evoked much adverse criticism at the time from the more enlightened members of society, but the Government having taken no notice of these criticisms, the administrative expenditure was allowed to expand far beyond the revenue before two years had elapsed. According to the Budget issued in the 30th year of *Meiji*, showing the estimates for the ten following years, the revenue for the 31st fiscal year was fixed at 211 million *yen* and the expenditure at 206 millions, the balance indicating an excess of five millions in revenue. Contrary to these calculations, we now find a deficit in revenue of over twenty millions, showing that the future of our financial administration is extremely precarious.

The anomaly thus noticeable is the result of our having failed to keep the administrative expenditure within the limits of the national resources. Unless the finances are properly adjusted at once, Japan can not escape the calamity which appears about to befall her. We therefore beg to express our opinions on the subject to the authorities concerned.

1.—The administrative expenditure should be arranged in proportion to the national resources. Extravagant state expenditure, beyond the resources of the nation, invariably endangers the foundation of financial administration. Is there no cause for anxiety on this point at present? It is of course impossible to show all the actual financial details, owing to the want of accurate statistics, but it is beyond question that no nation can double its resources in one or two years. Nevertheless the expenditure in the 29th year was doubled and in the 30th year trebled. Even supposing that the amount of expenditure for the previous years was proportionately small, its sudden enormous augmentation could hardly fail to impede the progress of the nation. Still more must this be the case when it is known that the former expenditure was far from being regarded as small in proportion to the national resources. The wealth of our country cannot be shown by statistics; but as it is a general rule that the larger portion of national wealth consists of immovable property, an agricultural country like Japan is sure to have most of its resources in land. Even granting that the actual value of land is five times the nominal rate assessed, the country's wealth in this respect does not exceed eight thousand million *yen*. This, added to the cost of buildings, and movable properties, will hardly reach a total of ten thousand millions. In Europe and America the ratio of administrative expenditure to wealth is 1 or 1½ per cent. only. A rate of over 2 per

cent. is seldom reached. England, with less than 1 per cent. of her wealth devoted to State expenditure, is predominant in the world, both in power and opulence, while Italy, which appropriates over 2.3 per cent. of her wealth to State expenditure is in a grievous state of decline. From these facts it may be inferred that the State expenditure ought not to exceed 1 or 1½ per cent. of the national resources, and that any excess of that limit is likely to be attended with a decline of national strength. Thus it is plain that the State expenditure for our country is far in excess of the legitimate amount. Unless it is curtailed in proportion to the national resources, it will be impossible to secure a perfect adjustment of the finances, while the progress of the nation will be impeded.

2.—In curtailing the administrative expenditure it is absolutely essential to decrease the expenses for armament. When the army and navy acquire excessive influence through victory in war, it often happens that persons holding high positions in them exceed the proper bounds of influence and endeavour to interfere in the administration, the result being an increase of unproductive expenses for armaments. Instances of that nature abound in the history of various nations. They are by no means matters for congratulation. Is our country at present free from this abuse? That an army and a navy are indispensable for the maintenance of independence is beyond all doubt, but at the same time it is necessary that as the administrative expenditures ought to be fixed proportionately to national wealth, so the expenses for armament must be determined in such a way as to be in equilibrium with other State expenditures. The present military and naval expenses of our country amount to more than 50 per cent. of the total State expenditure. The ratio which armament expenses bear to the State expenditure in Europe and America is less than 20 per cent. and seldom exceeds 40 per cent. at most. Each nation has a peculiarity of its own, and a single instance can not be taken as a standard for general adoption. But the excess of expenditure for armaments in our country is clear. Advocates of the expansion scheme are disposed to assert that the extravagant excess of armament expenses as compared with those in Europe and America is but temporary, and that when the fixed period expires the ratio will considerably decrease. That theory may be true, but it is also to be borne in mind that armament being unproductive, its expansion, when once undertaken, requires additional expenditure each year for maintenance. The heaviest augmentation in the armament expenditure has been caused by the excessive expansion of the army. Japan being surrounded on all sides by seas and oceans, it may be indispensable for her to devote her energies to her coast defence. But how can we justify the extraordinary expansion of the army as at present planned? We do not pretend to be perfectly familiar with affairs connected with the army, but we need not hesitate to assert our views on the general merits of the question. We consider that the armament for our country ought to be based on defensive principles, inasmuch as the resources of the nation do not yet permit the adoption of any schemes for offensive operations. We believe this to be a fact, and we suppose that the authorities directly concerned in the armament scheme are also fully sensible of it. The excessive expansion now undertaken not only tends to impair the financial strength of the nation, but excites the suspicion and jealousy of other Powers. There can be no ultimate good in such a course. Moreover, the extravagant expansion of the army not only directly increases unproductive expenditure to a very large amount, but also lessens the productive power of the people by the enlistment of a great number of youths for military service. A reduction of the number of troops in actual service has the effect of increasing the productive power of the people.

3.—Appropriate distribution of State expen-

ditures:—To assist the development of national resources by adjusting the finances of the country, it is not only necessary to curtail the State expenditure, but also to distribute the same in proper proportions. The existing system is greatly prejudicial to our development. The armament expenses, for example, are extravagantly estimated, little attention being given to the means of raising the money. Railways, postal, telegraph, and telephone services, which are conducive to the development of the national resources, lack proper improvement or extension in consequence of the insufficient appropriations allowed for them, the result being delays and great inconvenience in communications. We mention only the most prominent facts, but these we believe will suffice to show that the administrative expenditure is not properly distributed. The immediate reform of the administration is therefore of paramount importance, in order that by placing the State expenditure on an equitable footing, unproductive expenses may be curtailed, productive enterprises developed, and the progress of the country stimulated to the fullest extent.

4.—The necessity of simplicity as well as accuracy in the annual accounts:—The budget of a State ought to be so simple and clear that any person may at once understand its contents. The budget of our country at present is not only extremely intricate, but also, owing to the improper system adopted in its compilation, an enormous amount of surplus sums brought over from the previous account appear each year, though these amounts can not properly be included in the next year's resources. Any deficiency in the estimates of revenue for the coming year must always be supplied from an entirely distinct source of revenue.

The annual estimates, as the term clearly indicates, are nothing but a forecast of the amount of State expenditure required for the twelve months. Any extraordinary difference arising between actual revenue and expenditure must be attributed to defective knowledge on the part of the authorities concerned.

That a surplus is allowed to lie idle in the vaults of the Treasury for months or years is evidently the result of an improper system adopted in the settlement of accounts. Greater simplicity as well as accuracy in the budget can be secured, and greater facilities afforded in the management of national finances. The genuine system of accounts is to regard receipts during the 12 months as revenue and the disbursements for the same period as expenditure, and the accounts being balanced at the end of the year, any surplus or deficiency which may exist should at once be adjusted. That is to say, if there is a surplus, public bonds may be purchased, and if there is a deficiency bonds may be sold to make it good. By the adoption of this system the Government will be enabled to escape the embarrassment of allowing a surplus to lie idly in the vaults of the Treasury or having to find means of supplying a deficit. As for continuing expenses, the general programme at the outset to explain their purpose is sufficient, and there is no necessity for securing a vote for the total expenditure in the first year: the amount needed in each year can be submitted for the approval of the Diet that year.

5.—The necessity of securing simplicity in dealing with national finances.—The means of securing credit in financial administration lie in making the details publicly known to the people. If, apart from the Central Bank, the Central Treasury, or Deposit Department, which resembles in nature a banking institution, is conducted solely by the Government, the people are likely to entertain feelings of suspicion. So far as the Central Bank is concerned, it is advisable that the management of business relating to the receipts and payments, as well as deposits, of the Treasury should be entrusted to the Bank, no interference or restrictions being allowed. Should any restriction be imposed for the convenience of the Treasury, the advantages of the system of convertible notes will be lost, and instead of securing beneficial results by its operation, incalculable evils will arise.

6.—The advisability of raising a foreign loan with a view to liquidate domestic loans:—

The main cause of the distress into which our economic community has fallen is to be found in the fact that the people were required to bear all at once an enormous increase of expenses, while the indemnity was entirely appropriated for the expansion of armaments. It is obvious that if the Government had from the outset endeavoured to restore the national resources by liquidating domestic loans with a part of the indemnity, the financial embarrassment of the country would not have been so serious. It is no use arguing the point further. The best scheme is to raise a foreign loan of 200 million yen to be appropriated for the redemption of domestic loans. The amount defrayed directly as war expenses has not yet been ascertained, but it is said that it will be no less than 200 millions. The introduction of foreign capital and the redemption of domestic loans will not only enable the people to become possessed of funds, but will have the effect of placing them in a situation to meet any sudden burden of war expenses. Thus they can be relieved from the present distress, while the amount of national debt is in no way increased. Indeed, the scheme under notice is destined to restore activity in financial circles and to secure further development of productive industry, without entailing loss to the Government. We do not advocate the introduction of foreign capital except from urgent necessity. It is worth while to note that the loan so obtained should, under no circumstances, be appropriated for armament expenses or other unproductive expenditure, but should exclusively be employed in the liquidation of domestic loans. Any appropriation for armament expenses would have the effect of throwing the financial administration into disorder, for a foreign loan must be raised for the sole purpose of securing the development of national resources. As regards the process of redeeming domestic loans, the work may be consummated by purchasing the same, or accepting bonds for redemption the period of maturity of which has arrived. There is no necessity for selecting bonds in regard to classification. Some persons labour under the apprehension that a foreign loan is attended with serious danger. Such a notion, however, is simply the outcome of ignorance. If the national resources of our country are fully cultivated and our financial foundations firmly consolidated, there can be no cause for apprehension. The most urgent need at present is to promote the country's progress. The introduction of foreign capital being requisite towards that end, the plan ought to be undertaken without a moment's delay. The conjoint operation of the schemes enumerated above will alone secure proper financial adjustment. The consummation of our schemes of coast defence is, of course, a matter eagerly desired. Thus there are three things most needed in our country. The first is money; next comes a navy; the army ranks third.

Unless these three things are taken in due order the practical development of the nation's armament can never be expected. Some sections of the public clamour that the armament scheme has been considerably expanded; yet whether its efficiency has not been reduced is a question. In the late war with China a great army of six Divisions was maintained over seas for more than half a year, yet our public bonds were not suffered to fall below 95 yen. We wonder if we could do the same thing at present. Possessed of an army of 500,000 troops, we can not rely upon them unless we are convinced of our financial strength and are supported by a strong and efficient navy. We would rather maintain an army of 200,000 men than fail to obtain at a moment's notice a loan of several hundred of millions from the people. It is certain that what other Powers regard is not the magnitude of our armament but our financial strength. If, in utter disregard of these circumstances, the extravagant expenditure proposed for the expansion of the army—which the geographical position of Japan seems in no way to demand—is adhered to, and if we fail to adopt any schemes for the promotion of national resources

as well as for the extension of our commercial power outside the limits of our country, the day on which such an aimment is perfected will be the moment when the country will fall into a state of decline. In short, the proper measure to pursue is to curtail the administrative expenditure, facilitate financial adjustment, and so lead to the promotion of national resources. Without recourse to such a scheme, the so-called *post bel'um* undertakings can in no way be brought to perfection.

JAPANESE FACTS AND COMMENTS.

A railway clearing house for the whole Empire will shortly be established in Osaka after the style of similar clearing houses in Europe and America.

Census returns completed at the end of last year and published in the *Hochi* show that the number of families throughout the empire tallied 8,004,849; the total population was 42,708,264, of which 21,561,023 were males and 21,147,241 females.

Owing to the scarcity of stocks in Yokohama, quotations for sugar have risen considerably. Information has lately been received, however, from Luzon stating that the probable export for this season will reach two million cetties, so that rates will soon fall again.

The tea market, which opened so briskly this year, is now approaching its close. No orders have lately come from abroad and transactions are almost at a standstill as most of the buyers have left for America. Dealers in Yokohama are in no way pressing sales, and quotations remain as firm as ever.

The business of the Tokyo Tramway Company since July has been exceedingly prosperous. The figures for this year show that 11,810,940 passengers were carried, an increase of 27 or 28 per cent. over last year; while the receipts, amounting this year to 261,925 yen, have increased by 37 or 38 per cent. over last year.

Statistics of longevity in Japan published in the *Tokyo Asahi* are as follow:—

Age.	Men.	Women.	Age.	Men.	Women.
100	10	65	101	12	33
102	6	36	103	7	18
104	4	7	105	2	4
106	—	5	107	1	1
108	1	1	109	1	1
110	—	—	111	1	—

The *Mainichi* quotes a paragraph from a Chinese journal insinuating that the pro-Chinese party in Formosa recently despatched a representative to the Russian Minister in Peking, with a message to the effect that should negotiations be opened by the Chinese Government with Japan for the restitution of Formosa, efforts might be made by the Minister in question to aid China in consummating her object.

The *Tokyo Shimbun* states that Mr. Takenouchi, who lives at Minami Nakadori, Yokohama, recently entered into contracts for the direct import of rice, and 3,000 bags of Rangoon cleaned rice, out of 15,000 bags, arrived on the 29th ultimo, while 2,000 more were received on the 1st instant. The grain, it is said, is saleable at prices ranging from 4.80 yen to 4.84 yen per picul.

Count Okuma is reported by the *Chuo* to have enquired of the Premier in a recent interview, whether the latter would resort to the scheme of dissolving Parliament in order to ascertain the real feeling of the nation at the present juncture. The Premier replied that he would resign his post if the increased taxation scheme was not approved by the Diet. He is also said to have made a similar statement to Marquis Ito. But, adds the *Chuo*, the Premier's statements as to his action under certain circumstances are scarcely to be relied on.

Since regulations were promulgated by the *Daijokwan* in the 13th year of *Meiji* (1880), with regard to the imposition of the butchery tax, each prefecture, asserts the *Yorodsu*, has

collected from 50 sen to 1 yen per head on cattle, besides which the town or village tax was also leviable on the beasts. Butchers and sellers of meat were also obliged to pay the trade tax. Persons following these occupations were therefore required to pay taxes twice over. Steps are now being taken to present a petition to the Government urging the necessity of abolishing the butchery tax.

Counterfeit silver yen, asserts the *Shogyo*, are being imported for exchange. The spurious coins detected by the Yokohama Specie Bank are reported to be of exactly the same size and quality as the genuine yen, the only difference being in the characters borne on the face. Whether these coins were manufactured with a view to realizing the profit from the difference in the relative values of gold and silver or to facilitate circulation in districts where there may be a scarcity of silver yen, is a question still shrouded in mystery. Nevertheless, it seems probable that the counterfeiting was undertaken somewhere near Canton.

According to the *Mainichi*, silver and notes exchanged for gold during the month of November at the Bank of Japan and its branches in various parts of the empire amounted to 5,115,225 yen, showing an increase of 203,795 yen over the previous month. The aggregate total of exchange undertaken since the enforcement of the gold system on the 1st October reaches 10,266,655 yen. The figures for last month were as follow:—Tokyo, silver exchanged, 77,845 yen; notes, 25,840 yen; Yokohama, silver 54,579 yen; notes, 1,735,851 yen; Osaka, 182,000 yen and 2,167,100 yen respectively; Bakan, notes, 37,350 yen; Nagoya, 11,880 yen; Hakodate, 7,390 yen.

According to the *Fiji*, foreign rice imported through Yokohama amounted during November to 241,717 bags, equivalent to over 9,100 koku, valued at 888,866 yen. The total import from January this year for Yokohama alone exceeds 430,450 koku, valued at 3,447,600 yen. The import of cotton aggregated 2,295,640 cetties, valued at 421,066 yen, which, added to the sums paid since January this year, makes a total of 4,919,000 yen. The figures for spinning, electric, and locomotive machinery were also considerable, showing an excess in the middle of November of two million yen. The export of silk reduced the excess of November imports to about 500,000 yen.

Referring to the transfer of capital that may take place during this month, the *Osaka Asahi* says that while receipts at the Treasury will be limited to the mining tax alone, outgoings will amount to 8,812,173 yen. The figures are as follow:—Salaries, 1,780,846 yen; pensions connected with decorations, 527,522 yen; interest on Consols, 4,301,543 yen; interest on War Bonds, 1,982,812 yen; yearly installments of old loans, 219,455 yen. Payments on shares in various railway companies will be as follow:—Sanuki, 60,000 yen; Sanuki (6th payment) 30,000 yen; Hankoku (6th payment) 240,000 yen; Sanyo (new shares) 1,080,000 yen; Karatsu Industrial Railway (6th payment) 120,000 yen; total 1,530,000 yen.

The amount of convertible notes in circulation, remarks the *Mainichi*, was considerably reduced about the middle of last month. Subsequently the number again increased, and at the end pressing demands for loans brought about an enormous augmentation. On the 29th ultimo, these notes aggregated 200,743,601 yen and the issue above legal limit did not fall short of 20,289,810 yen. That convertible notes have been steadily increasing since the late war is not to be denied, but the amount never exceeded 200 millions, except in August this year, when it reached 20,015,000 yen. At the end of last month an abnormal excess of 740,000 yen was noticeable, and it may reasonably be expected that as pressure increases towards the close of the year the issue of notes above legal limit will exceed 40 millions.

The annual increase of students in primary schools is not met by a corresponding increase

in teachers. The Educational Department accordingly ascertained the views of the High Education Council and have now fixed the number of teachers at one per seventy students. But Normal Schools have hitherto been conducted on a much smaller scale and are therefore unable to accommodate from 120 to 200 students. Another step in advance had thus to be taken, and it has now been determined that the accommodation for students in Normal Schools will be doubled, except in four or five prefectures. Iwate will be required to increase its scholars from 120 to 250, and Tokyo from 160 to 320. It is estimated that should the present scheme be successful 3,500 or 3,600 graduates will be available from the fourth year after its going into force.

Marquis Ito is reported by the *Hoshi* to have made the following remarks upon the Kiao-chow affair when a certain gentleman called upon him at Oiso:—"The recent telegram touching upon the Kiao-chow affair seems to have taken the public by surprise. But it is beyond question that a secret alliance such as is shadowed in the telegram can by no means be concluded. There is nothing in the rumour worthy of credence." On being questioned how the Kiao-chow affair was progressing, the Marquis replied:—"China has but two courses to adopt at the present juncture. The first is assume an implacable attitude towards Germany, urging that no negotiations can be opened until the troops are withdrawn. Steps would, in that case, be taken to prepare the army for action, and a note sent to the commander of the German troops urging him to evacuate the forts and withdraw his fleet, with the proviso that failure to comply would immediately be attended with open hostilities. If this plan be deemed hopeless, there can be no alternative but to open negotiations in the form of a diplomatic question and to grant appropriate concessions. I suppose China will adopt the second course. As to the probable issue of the affair, it may be remarked that so far as actual conditions indicate, the complication can scarcely be a cause for aggression or rivalry among various Powers or create an incentive for the dismemberment of China. Presumably China will pay a certain indemnity for the barbarous deeds of her people and so settle the affair amicably with Germany. Japan, as a friendly neighbour to China, ought to expostulate with the latter against repeating these horrible massacres of foreigners."

The proposed welcome meeting in honour of Mr. Takano came off on the 1st instant at the Nakamura Restaurant, Ryogoku. The *Mainichi* introduced its report by observing:—"Among the various unconstitutional proceedings of the present Cabinet, the most prominent was the order placing Mr. Takano on the retired list. But the candour and steadfastness of the ex-Chief Judge have had the effect of strengthening the public spirit of the people. Many distinguished personages, indignant at the Cabinet's procedure, took part in this meeting without previous appointment. They numbered altogether 160. Evidently they had come, not for the sake of Mr. Takano alone, but with the intention of supporting the Constitution and also to demonstrate that they valued the honour of the country in all matters in which aliens are concerned, by urging the strict maintenance of the safeguards provided for the independence of the Judiciary. Mr. Iida Kosaku, projector of the meeting, delivered a short address. Then Mr. Takano introduced Mr. Hamasaki, ex-Judge of the Formosan Court. This gentleman spoke about the condition of Formosa and then passed on to the real object of the meeting. He said that the present Cabinet had not only trampled the Constitution under foot but also destroyed the security provided for the independence of the Judiciary; it issued a notice of dismissal to him (Judge Hamasaki) without pursuing the proper procedure—trial before a Disciplinary Court. If these unconstitutional acts were allowed to pass without protest, Japan's honour as a constitutional country would certainly be impaired, and the personal safety and well-

fare of the people would be in constant danger. Viscount Soga then rose and spoke as follows:—"The amount of corruption and demoralization that exists at present among the people is really startling. The whole population is given up to the pursuit of temporary profits. No one is brave enough these days to sacrifice himself for the cause of the country, or to propound his views for the empire's good. When the Tokugawa Shogunate, after maintaining peace for three hundred years, found itself without power to remedy the general dissipation of the people, the upright *samurai* of Aiko rose in the Genroku era and by their noble deeds revived the knightly spirit. Mr. Takano's conduct in the present case may fairly be compared to that of the champions of the Genroku period. It is in this spirit that I partake in the present meeting." Mr. Taguchi was the next to speak. He said:—"The influence of the late war is not limited to Formosa alone. Unfortunately the island is overwhelmed with abuses brought about by maladministration, and odious habits of corruption have set in. The attention of the Foreign Powers is apparently concentrated on this newly-acquired territory, and owing to these lamentable circumstances adverse criticisms are coming in from all parts of the globe. Mr. Takano virtually sacrificed himself with a view to effecting a cure, but his efforts brought serious misfortune upon himself. He was looked on by the Cabinet as an obstacle that must be got out of the way. The intention of the Cabinet, it seemed, was to allow Formosa to decay. When, in the days of Lord Palmerston, war was about to break out between England and China, John Bright justly observed that China was an arrogant, barbarous country, and suggested the necessity of inflicting severe punishment. "As for me, I would like to say," remarked the speaker, "that the Cabinet, being so arrogant and barbarous, ought to be destroyed by all means." These words excited the laughter and applause of the whole audience.

According to investigations completed by the Bank of Japan and published in the *Shogyo*, the prices of domestic staples in October and November this year compared with those for November last were as follows:—

Commodity.	Nov., 1897.	Oct., 1897.	Nov., 1896.
Timber	309	309	227
Eggs	250	240	227
Oil	243	238	212
Barley	227	200	155
Matting	221	211	206
Copper	207	205	184
Wheat	205	186	—
Wood	204	170	—
Miso	200	189	163
Flour	198	188	151
Leather and skin	184	181	169
Charcoal	180	175	195
Window glass	179	166	134
Manure	156	144	141
Say	156	151	128
Sugar	141	138	107
Tea	127	125	116
Lacquer	115	113	106
Nails (foreign)	108	108	—
Dried bonito	257	281	199
Salt	242	245	236
Shittings	202	202	201
Iron	188	196	164
Oil cake	185	191	179
Cotton (for spinning)	138	142	145
Silk	134	137	107
Cotton yarn	130	131	117
Wax	125	126	121
Bleached cotton stuff	123	130	95
Silk thread	121	125	125
Silk floss	120	124	107
Cotton thread	117	126	123
Kerosene oil	109	112	122
Lining stuff	103	104	102
Rye	—	258	—
Rice bran	—	178	—
Cut tobacco (Japanese)	—	142	116
Hemp	—	—	133
Average	174	173	152

(In the above table 100 is taken as the standard of value for the 20th year of *Meiji*). It will be seen that the prices of commodities in November this year rose 74 per cent above those for January, 1887; one per cent over the previous

month, and 22 per cent over the corresponding period of last year. The annual average of prices since 1887 is as follows:—1887, 103; 1888, 107; 1889, 112; 1880, 117; 1891, 109; 1892, 115; 1893, 119; 1894, 126; 1895, 135; 1896, 146. From those figures it can easily be seen that prices have been steadily rising ever since 1893. The appreciation was slow but steady, although investigations as to each individual article show that five have fallen since September; eight fell in October, and fifteen or sixteen in November.

DYNAMIARDS IN TOKYO.

The *Tokyo Shimbun* says that, on the 3rd instant, a *soshi* presented himself at the police station in Tokyo, and made a strange confession. He called himself Horikawa Masao and explained that the conduct of the Ministers of the Crown had for some time been a source of dissatisfaction to him. He therefore planned to kill Viscount Takashima, and for that purpose manufactured a bomb with the intention of using it against the Minister of War on that day. But when the time came to consummate his murderous project, something—he does not seem to have explained what—let him to change his mind, and to proceed to the police-station carrying with him the bomb, which, as well as his own person, he surrendered. He also indicated as his accomplice one Takigawa, an assistant clerk in the post office. The latter was immediately arrested, and the two are now undergoing examination. Such is the story.

CONSUL-GENERAL KENNY IN HONOLULU.

Mr. Kenny has been received with all the honors in Honolulu. The *Hawaiian Gazette* writes thus of his arrival:—

Her British Majesty's new Acting Consul-General and Commissioner to Hawaii arrived quite unexpectedly yesterday. He came direct from Japan by the steamer *Rio de Janeiro* and is temporarily domiciled at the Hawaiian Hotel. W. J. Kenny is his name and he is an affable young man of very pleasing personality. Thos. Rain Walker, the present popular acting local representative of the Queen's Government, will doubtless present his successor at the Capitol in a day or two. Mr. Walker will then be able to make the journey abroad which was postponed on account of the sad and untimely demise of Capt. A. G. S. Hawes, who came here from Tahiti to act for Great Britain.

After it was learned that Mr. Cusack-Smith, who had been British Consul at Samoa was unavailable for this post, Mr. Kenny was instructed by cable to report here without delay. He said last evening that when his marching orders came he was up-country riding himself of Formosa fever. He was one of the few white men on the Island who fell a victim to the ailment, but fortunately was about recovered when the message sending him to Hawaii were received. He is now quite well again and with his graceful height and fine figure looks like an athlete.

For nearly twenty years has Mr. Kenny been in the service of his country. For ten years he was registrar and interpreter of the Consular Court at Yokohama. Then he was attached to the consulate at Hakodate and from there was sent to Tainan, Formosa. He speaks Japanese beautifully and has a valet in a kimono who understands scarcely a word of English. The new official says he is pleased to make a change and is certain he will like Hawaii. He cannot say whether he is to be in Hawaii indefinitely or not. His instructions were to come here as "acting" Consul-General.

Mr. Kenny was not expected before the 19th by Mr. Walker. He says he packed up on the instant and took the first steamer. If the first impression is to count, Mr. Kenny will be satisfactory to the resident Britishers and from his experience in Japan and his knowledge of the men and language of that country will be an especially capable man for Great Britain here at this time.

Assistant Paymaster Reginald C. Baker has been appointed secretary to Rear-Admiral Charles C. P. Fitzgerald, the new second-in-command of the British fleet in this station.

THE NEW MINISTER TO GERMANY.

We read in the *Yiji Shimpo* that it has been decided to send Mr. Tsuzuki Keiroku as Minister to Germany in succession to Viscount Aoki, who recently returned. Mr. Tsuzuki was Vice-Minister of Education while Marquis Hachisuka held the portfolio of that Department. He is one of the "coming men" of Japan.

CHINESE NOTES.

The death is announced of M. Imbault Huard, French Consul at Canton. M. Huard had been 19 years in China. He served as assistant-interpreter to the French Legation in Peking, as interpreter to the Shanghai Municipal Council, for the post of Captain-Superintendent of Police in Shanghai. The *N.-C. Daily News* is inclined to doubt the wisdom of the selection, on the ground that the Irish Constabulary is a semi-military body. We should have regarded that as a recommendation in a place like Shanghai, where the police may have to act at any moment in combination with the Volunteers.

Mr. Pierce B. Pattison, now on the staff of the Irish Constabulary at Clonmel, has been recommended by the Inspector-General of the Royal Irish Constabulary and by Mr. A. G. Wood, formerly Chairman of the Shanghai Municipal Council, for the post of Captain-Superintendent of Police in Shanghai. The *N.-C. Daily News* is inclined to doubt the wisdom of the selection, on the ground that the Irish Constabulary is a semi-military body. We should have regarded that as a recommendation in a place like Shanghai, where the police may have to act at any moment in combination with the Volunteers.

A correspondent writing to the *N.-C. Daily News* from Linching in Shantung, says under date of Nov. 3rd:—

The grain fleet has returned from the north and has reached Tungchang-fu, 110 li to the south-east of us. The experience of last year has brought them along in good time not to get shut in over winter. Here at Linching it is necessary to unload the boats and drag them over land, a hundred men or more tugging at the ropes of each boat. It is at such times that one gets an inside view of Chinadom. One view is not a cheering one; for along the bank are laid scores of coffins, each with its occupant, victims of the long journey. Passengers in the steamers from San Francisco are accustomed to such sights, but as the said coffins are either air-tight or their inmates have been embalmed, his reflection is solely confined to the fact that the Chinese have a longing for the mother country equalled by no other people. Here on the banks of the canal it is different, the chief thought being to get "betwixt the wind and their nobility" as soon as possible.

Mr. Gervais Cooke, who has been prospecting for minerals in Kiangsi and Anhui provinces, reports the discovery of extensive coal fields in the former province contiguous to the Yangtze. He has also found a six-foot seam of good quality close to the surface in Ningkuo prefecture, Anhui. Facilities of carriage are alone wanting to make these deposits valuable.

"General Chang Kao-yuan," says the *N.-C. Daily News*, "who was in command at Kiaochow Bay at the time of its seizure by the Germans has, according to a Peking despatch, been denounced to the Throne by Li Ping-heng, the retiring Governor, for cowardice in not resisting the invaders. General Chang is one of the most popular officers in the Northern army and our Newchwang correspondent wrote very highly of him during the war with Japan. It is said by the friends of General Chang that when the Germans appeared they notified him that the Emperor of China had handed Kiaochow over to the former and dared him to resist on pain of being denounced as a rebel."

China furnishes a good many surprises from time to time. The latest is an organized emigration of paupers from Kiangpoh to Soochow and Changchou. These people, some twenty thousand in number—men, women and children—, finding themselves without means of subsistence owing to the destruction of their crops by floods last summer, quietly migrated to more fortunate regions, and are now living

on the simple principle of helping themselves to whatever they can find. "They follow military rules in forming an encampment, such as posting guards, etc., at various points. When they arrive at a district two-thirds of the women and children at once spread themselves over the fields and pull up by the roots anything planted there—at the present time, generally vegetables, beans, etc.,—while a strong force of men form a covering party, armed generally with clubs and staves. The remainder of the women, children, and men in the meanwhile approach the villages and "beg" for rice or wheat, although in many cases it is not begging but actual taking what they can without asking "by your leave." In two hours after the arrival of the refugees at a village they are able to get rice and vegetables *ad libitum* and feed themselves to the full. They rarely stay more than forty-eight hours at any one place, moving from village to village, and going in a north-easterly direction with the intention, they declare, of appealing personally to the Governor at Soochow for the wherewithal to tide over the cold weather."

We take the following paragraphs relating to Kiao-chow from the *N.-C. Daily News* :—

On Saturday last (26th Nov.) a number of junks, belonging to local native hongs, which had loaded for Kiao-chow returned to port (Shanghai) with their original cargoes on board, and reported that they had been prevented by the Germans from entering the harbour limits of Kiao-chow, while Tientsin junks already in Kiao-chow harbour loading for the north were also prevented, according to the story of the local junkmen, from leaving the harbour.

Since the seizure of Kiaochow Bay by the Germans, a great increase of activity has been observed in the interior in the way of recruiting troops, says a native correspondent, and it is intended to double the number of battalions by the end of this Chinese year in all the maritime provinces. A telegram from Peking stated that the Emperor has been receiving no less than forty-eight secret memorials on the subject of the defence of the empire, not only from the Censors but also from the high military and civil officials in the empire. A change of policy will certainly be the outcome of all this, as great indignation is felt in the interior provinces at the action of the Germans. Not even during the late war with Japan was there such a united feeling that something must be done for home and country, as may now be observed everywhere amongst the educated people and the masses. This patriotic spirit is said by the same writer to be greatly due to the reading of the books published by the missionaries since the late war.

A decree has been issued by the Throne forbidding Li Ping-heng, the Viceroy designate of Szechuan, to leave his Governorship of Shantung until the case of the murder of the two German priests at Yenchen is settled satisfactorily. Another decree, issued shortly after, commands Chang Ju-mei, the Governor-designate of Shantung, who happened to be in Peking for his audience at that time, to start at once for Chinanfu, the capital of Shantung, to assist Li Ping-heng. Regarding the late decree a Tientsin dispatch reports that H. E. Chang Ju-mei passed through that city en route for Shantung on the night of the 20th instant, called upon Viceroy Wang the next morning, and had a conference with him which lasted all day and part of the night. At daybreak of the 22nd instant, H.E. Chang started for Chinanfu via the Grand Canal route. The same dispatch also reports the arrival at Tientsin on the 20th of Dr. von Prittwitz, Secretary of the German Legation, bound for Kiaochow Bay. It is further stated that Dr. von Prittwitz intends to visit the scene of the late murder in Yenchen prefecture.

Our German contemporary *Der Ostasiatische Lloyd* published in its last issue the account of the occupation of Kiao-chow Bay, together with a detailed description of the topography of the neighbourhood, from which we translate the following extract :—

Regarding the taking of Kiao-chow by forces from the squadron of cruisers we learn that it took place in the following manner :—

On Sunday, the 14th inst., at 8 a.m. a landing party was sent ashore to take possession of the heights surrounding the bay. At the same time the order was given to the *Cormoran's* landing party, she being farthest inside the bay and commanding the passes to the interior, to take the powder

magazine. Towards 9 o'clock these points having been secured, the Flag Lieutenant was sent to the Chinese General with an ultimatum that within three hours he must clear out of the camps. The soldiers were permitted within the same time to depart with their weapons and possessions.

The two ships *Kaiser* and *Princess Wilhelm* were so anchored outside of the port that they commanded the forts, the order having been given to fire on the same on a certain given signal.

After delivery to him of the ultimatum the General withdrew, as resistance, especially as his ammunition had been seized, would have been futile; the same was done by the soldiers, saving their goods and chattels as far as possible.

Toward 2 p.m. the German flag was hoisted on the East fort; the Admiral made a speech to the crews, these saluted and gave three cheers for the Kaiser.

While the flag slowly ascended a salute of 21 guns was given by the men-of-war.

The inhabitants behaved quite peaceably, in reality they were satisfied to be free of the native soldiers. The native soldiers withdrew behind the hills and erected a camp at a distance of 7 to 8 kilometres (about five miles).

The forts were then all occupied and measures taken to guard the country against plundering.

NEWS OF THE WEEK.

The Hawaiian steamer *China*, belonging to the Pacific Mail Company, has made another record, coming up from Kobe in the splendid time of 20 hours 14 mins.

Sir W. J. W. Bayne, who was chairman of the Old Oriental Bank Corporation previous to its liquidation in 1884, died on 26th Oct. at his residence, Forest Lodge, West-hill, Putney, at the age of seventy-seven, after having been for some months in declining health.

The new gun-boat *Surprise*, of the French navy, arrived at Colombo on the 3rd November. The *Surprise* is one of the vessels ordered out to augment the fleet in the Far East, but was delayed as she was ordered to proceed to Madagascar before coming on to her new station. From Madagascar she left direct for Galle.

It is reported that the British dollar is growing in popularity on the East African coast. According to the Bombay Mint statistics, in ten months from the institution of the British dollar, it had delivered 3,316,000 coins; but since the adoption of the gold standard by Japan, this mint has turned out British dollars at the rate of 200,000 a day—at a gross profit of 4,000 rupees per diem.

Pensioners are proverbially long-lived and we think that the palm must be given to one that died in America the other day. His name was Osea Brown, and he secured his pension for service in the war of 1812. At the time of his death the old man was 105 years of age, and it is said that up to the end his health was good and his memory remarkably clear.

The Monte Carlo budget, which has just been issued, shows that the profits for the year ending October 31st, were 5,000,000 francs below those of the previous year. No reasons are assigned for this falling off. The bank's outlay included 2,000,000 francs to the Prince of Monaco; police and grounds, 1,500,000 francs; salaries, 1,000,000 francs; orchestra and sports, 800,000 francs; payments to ruined gamblers, 100,000; and for the prevention of suicide, 100,000 francs. The number of suicides was thirty five.

It may be of interest to state, remarks the Nagasaki journal, that several hundred thousand roubles worth of new coinage has just been shipped from Marseilles for Vladivostok to the order of the Russian Government. The new currency has been specially designed for circulation in Manchuria and for the payment of labour employed on the Russian and East China Railways. On the one side the inscription is in Russian and on the other in Chinese.

Of many curious expresses that have appeared in Kobe the following, which emanates from the "Kobe Baker's Band," announcing that the

price of bread is now to be 7 sen per pound, is surely one of the best, remarks the *Hogo News* :—"Notice.—Dear Sir, We respectfully revision here that of the Bread value, because to add to materials rate henceforth 1st December, should be supplied on the following price."

A circular has been issued at Singapore, under the auspices of the local Engineers' Association, inviting the assistance of the engineers in the Straits towards the funds of the Amalgamated Society of Engineers in their prolonged struggle with the Federated Employers. A substantial sum has already been subscribed on the list placed in the Marine Club, says a southern contemporary.

Fire broke out in an unoccupied house in Yamamoto-dori, on the Hill, at Kobe, at 2 o'clock on Sunday morning and quickly spread to an adjoining house occupied by Messrs. Young and Grimble, who had to effect a rapid escape, and lost not only their furniture but most of their personal effects, none of which, according to the *Kobe Herald*, were insured. Another house, occupied by a Japanese, was also destroyed.

Kobe Reading Circle has started upon another season of work with splendid prospects. There are now 128 members on the roll, and a cash balance of yen 28.77. The office-bearers are :—President, Mr. T. W. Hellyer; Vice-President, Mr. C. Crowther; Hon. Sec. and Treas. Mr. R. H. Woolfall; Committee, Miss Atkinson, Mr. Bardens, Mrs. Lightfoot, Mr. F. Grimble, Mr. Hazeland, Mr. Feast and Dr. Atkinson.

Fire broke out in the waiting-room of the main block of buildings at the Suma Hospital at 8 a.m. on Thursday, says the *Hogo News*. Damages estimated to amount to over 10,000 yen were done to the property ere the fire was got under at 10.30. The outbreak is attributed to some defect in the fitting of one of the stoves that have been recently put in. Fortunately no person was injured. We are informed that the Hospital is insured, but that the present accident is not covered by the insurance.

The Marine Court of Inquiry, sitting at Singapore, has delivered the following finding in the *Moyune* case :—"We find that the steamer *Moyune* grounded on an uncharted shoal in the Sulu Sea on October 2nd, 1897, in about lat. 8° 6' N. and long. 118° 6' 30" E. The ship was navigated with proper care. The Captain and second and third officers took part in the navigation. They kept a proper record of all their observations, which agreed with one another. We hold the Captain and officers entirely free from blame, and consider that everything was done for the safety and benefit of all concerned after the stranding of the ship."

The *Times of Ceylon* of the 4th November says :—"We said recently that Mrs. Carew, the adjudged poisoner of her husband in Yokohama, would be passing through Colombo in the P. and O. steamship *Sumatra* now in our harbour. Mrs. Carew is going home second-class, and she is allowed liberty as far as coming up on deck is concerned. But it was noticed by a visitor that she had a police male warder on her left, and a female attendant on her right, and when the former found that someone was on board desiring to converse with his charge he signalled to the latter, who promptly took the prisoner below. Mrs. Carew, though, looked well after her Hongkong treatment.

Englishmen are interested in the fact that insanity is on the increase in Great Britain, and naturally discuss questions bearing upon the subject. In the last report of the Commissioners of Lunacy suggestions were made as to the effect of the segregation of lunatics. The asylums are increasing in size, and, while there have been great improvements in the methods of caring for the patients, results seem to show that the massing together of persons mentally diseased diminishes the percentage of cures. The recovery rate of 1896—38.53 per cent. of the total admissions—was actually 0.48 below

the average annual rate for the last ten years. It is becoming recognized that the innocent and healthful exercises and amusements provided for inmates of asylums in no wise compensate for the contact with the sane and the ordinary homely relations of life of which they are deprived.

The *Hai-Yung*, a cruiser just launched at Stettin for the Chinese navy, has a displacement of 2,950 tons, engines of 7,500 horse-power and a speed of nineteen knots. The battery is composed of three 6-inch and eight 4-inch quick-firing guns, and a secondary battery of 1.4-inch Hotchkiss and six machine guns.

A correspondent in Formosa writes, says the *Hongkong Daily Press*:—"The south is dead, but the north is booming. Building is going on on all sides, rates double and treble the old rates, and Jardines are erecting a place which will be the largest foreign hong in the island. Smith, Baker & Co. are also enlarging their quarters.

Messrs. Vickers & Company tested a newly designed six-inch quick-firing gun on October 21st, with satisfactory results. The projectile, weighing 100 pounds, started with a muzzle velocity of 2,784 feet per second and exhibited a power, according to ruling formulas, of penetrating 11½ inches of Harveyized steel armour.

For his new book entitled "Following the Equator" it is said that Mark Twain will receive \$40,000 (gold), the whole of which he will turn over to his creditors, to whom he owes about \$20,000 more. He has been invited by an English publishing-house to write his autobiography, and is said to be considering the offer.

The cruiser to be presented by Spanish residents in the Argentine to Spain is to be built at Havre. She will be of 1,775 tons displacement, 250 feet in length, 36 feet beam, and with 7,100 horse-power is expected to make a speed of twenty knots. The armament will be rather light and composed of small calibre guns.

At Foochow on the 13th November a cricket match was played between the *Alacrity* and the Foochow Cricket Club. The *Alacrity* scored 112, while Foochow made the small total of 36 in their first innings, but in the follow on made 131 for the loss of seven wickets. A return match was played on the 16th, when the *Alacrity* made 125 and Foochow 171 for nine wickets.

A Shanghai humorist has circulated the following topical express:—

"A private wire from Hongkong gives the following details of the Partition of China:
 "Germany: Shantung.
 "Russia: Korea, Manchuria, and Chili.
 "France: Formosa and Fukiien.
 "Japan: Hongkong.
 "The China Association HAS met."

Bert Willison's benefit takes place at the Circus this evening. We understand that the strength of the troupe has been augmented for the occasion by the addition of a dozen or more amateurs in various acts of athletics and equestrianism, and the new element introduced may confidently be expected to provide a fund of amusement, while the troupe itself will produce several novelties. A bumper house is expected.

In the course of his quarterly address to the Blackburn Chamber of Commerce the President (Mr. Henry Harrison) referred to the deputation appointed to the Board of Trade to obtain the adjustment of the preferential shipping rates to China given to America over England. It was stated that the difference in freight was so enormous that instead of being sent direct Lancashire goods were actually sent to New York and reshipped to Shanghai, *via* Liverpool, and money saved over the transaction.

An extraordinary condition of affairs has arisen, remarks *The Times*, in connection with the Atlantic mail service for next year. The Government have not received a single tender complying with the terms of the advertisement—namely, that the terminus west both in winter and summer should be at a Canadian port. The Allan and Dominion lines are willing to

continue their present service for another year, provided vessels are allowed to make Portland, Maine, their winter terminus. Public sentiment, however, is strongly opposed to building up an American port at the expense of Canada. The impression in official circles is that the Government will require the Beaver line to carry the heavy mail—parcels, newspapers, &c.—from St. John to Liverpool during the coming winter, and will send letters *via* New York until the proposed fast service is in operation.

The *Musical Standard* says that in the south walk of the old cloisters of Westminster Abbey there is an old simple gravestone lying flat on the ground, bearing this inscription:—"Muzio Clementi, called the father of the pianoforte; his fame as a musician and composer, acknowledged throughout Europe, procured him the honor of a public interment in this cloister. Born at Rome, 1752. Died at Evesham, 1832." The writer goes on to say that this tomb, which should be held dear and sacred by every musician, is so worn and dilapidated that the inscription is difficult to decipher. Thus runs the world away. The best man living, let him die to-day, to-morrow may be forgotten and his tombstone cracked and covered with moss.

The *Hongkong Daily Press* translates the following paragraph from the *Comercio*:—"The steamer *Churruc*, which arrived at Manila on the 21st November from North Luzon, brought in tow the new steamer *Tungkong*, recently acquired in Hongkong by the Compania General de Tabacos, which was picked up eight miles West of Matalvi Bay, without water, without coal, and with damage to her boilers that rendered her completely unmanageable. The vessel was commanded by a captain of the British mercantile marine, her crew being Chinese. We congratulate the captain and officers of the *Churruc* on the seamanship they displayed in getting the vessel into tow after the cable had broken three times owing to the heavy sea running and on having rescued the crew from certain death.

The first election of Greater New York is reported to have cost \$2,374,000. It cost the four boroughs constituting the new municipality \$497,000, and the cost to political organizations is thus stated by the *New York Herald*:—

Republicans.....	\$510,000
Democrats.....	412,000
Citizens' Union.....	318,000
Jeffersonian Democracy.....	120,000
All others.....	155,000
	\$1,515,000

The estimated cost to candidates is placed at \$362,000. There were 200 offices involved in the election and 854 candidates for them. The average cost of the election for each office is placed at \$11,870, and for each candidate \$2,662.

Among some Canton Notes contributed to the *Hongkong Daily Press*, we find the following:—

The four robbers who ransacked a nunnery named Po-Hing-um, in Ku-yan lane, as reported some time ago, and were arrested afterwards in a house in the neighbourhood, were decapitated in Tintaz-ma-tau on the 25th ult. The woman who knocked at the door under the pretence of engaging the nuns to go to her house to hold a mourning service was also arrested and was sentenced to death by strangulation.

A junk having no passengers on board was observed several days ago by a Chinese cruiser in Kuchow. The appearance of the junk aroused suspicion and the cruiser at once steamed up to her. On reaching her the captain of the cruiser wanted to make a search of the hold, which was nailed up, but the crew of the junk refused to open it. The hold was at last broken open by the captain and there were found three young women, four girls from ten to thirteen years old, and a baby. The crew were all arrested and on making enquiries one of the women said that she and her companions were kidnapped from Kuchow district. The captain of the cruiser took all the kidnapped persons back to Kuchow and delivered them to the local Magistrate, who will deliver them to their relatives and friends.

For some years past, remarks an exchange, the record drive at golf has stood to the credit of Lieutenant F. G. Tait, the amateur champion in 1896, who on a frosty day in Scotland managed to drive the ball a distance of about 328 yards. This record has, however, recently

been broken in the most complete and convincing manner by an amateur on the Blackpool links. While driving to the eighth hole this gentleman pulled his ball in the direction of the road which runs close to the links, and before the ball had ceased moving a distance of three miles had been covered. It is only right to explain that the ball in question was not bewitched; it only happened to drop in a passing open carriage, much to the consternation of the occupants, who retaliated by taking it on with them to Blackpool, three miles along the road.

About 8 o'clock on Friday morning, while rice was being discharged in Yokohama harbour, from the Mitsui Bishi Company's steamer *Fuyo Maru* into lighters alongside, the chain of one of the cranes suddenly broke, and striking a Japanese coolie on the head, killed him on the spot, and also severely injured an officer of the steamer, a German subject, necessitating his immediate removal to the German Naval Hospital.

The Finance Department having decided to exchange the Railway Loan Bonds hitherto issued for bonds of a new form, a Notification of the Department appeared on the 1st instant, directing the holders of old bonds to make application at the Bank of Japan or its branches in order that the exchange may be effected. In the case of unregistered bonds, various particulars have to be furnished in writing, but the process of exchanging registered bonds is very simple.

The Committee appointed at the meeting of British residents of Yokohama held on the 22nd March last, to carry out the resolution for the rebuilding of Christ Church, have issued a circular appealing for subscriptions and showing what has been done so far. About \$20,000 will be required, towards which sum rather more than \$7,000 has already been subscribed. Mr. Cecil Guinness is the Hon. Treasurer, and Rev. E. Champneys Irwine, Hon. Sec. of the Fund, and will be glad to receive the names of subscribers.

A Washington despatch under date, Nov. 10, says:—"The President has decided on the appointment of Charles Page Bryan of Chicago as Minister to China in succession to Col. Charles Denby. Mr. Charles Page Bryan is a native-born Chicagoan. He is a son of Thomas B. Bryan, a well-known local capitalist. The young man had his early education in Chicago, and completed his studies at the University of Virginia. He graduated later from Columbia Law School, and was admitted to the bar in 1878. He then went to Colorado and engaged in newspaper business in both Colorado Springs and Denver. Then he became president of the Colorado Editorial Association and served several terms in the State Legislature. Returning to Illinois, he engaged in politics, being elected to the State Legislature in 1890, and has been a member of it ever since. Colonel Bryan, as he is known, is a popular militiaman and served on the staffs of four different Governors. He was prominently associated with the working-up of foreign interest in the Columbian Exposition. Secretary Gage is given credit for the selection, the Gage and Bryan families being neighbours in Chicago.

"We have frequently heard," says *Industries and Iron*, "of the impending supersession of the chain in bicycle construction which would occasion something like a revolution in this important industry. A number of tests carried out under the supervision of Professor Carpenter at Cornell University do not, however, point to the probability of any general change in this direction taking place. The conclusion which has been arrived at is that no form of gearing can possibly equal the best chain for efficiency and durability. As a result of tests of chains which had been in severe use, it was found that friction varied from 2 to 5 per cent. The friction of a complete wheel was tested under working condition in several instances, and was found to vary from 5 to 40 per cent. of the power applied. For high-class wheels the value

ranged from 5 to 8 per cent. Tests were also made of bevel and other gears, but in every instance the chain gearing was found more efficient than any other form. A feature in the chain-gear bicycle which gives it an advantage over other forms lies in the fact that the friction in the former is practically constant at all loads, while in bevel gearing, for instance, the friction increases with the load."

We are asked to state that the opening day of the new Yokohama General Hospital has been postponed until Monday, the 13th at 4 p.m. Ladies are cordially invited to attend and inspect the handsome new wing and appointments generally.

At Hongkong Police Court on Nov. 27th, says an exchange, the hearing of a rendition case brought out the facts of an atrocious murder which was committed on the 14th June last in the village of Ko Chiu lin, district of Haifong, prefecture of Hueui. The victims were twenty-four men, two women (one of whom was *enclave*), and four children between eight and ten years of age. It appears that on the evening of the day in question the villagers were quietly reposing after their meal, when a band of robbers, 1,000 strong, led by a man named Lam Tai Kau, swooped down upon them from a neighbouring hill, murdering all those that came in their way. They then sacked the place and took away with them property and money to a value of twenty thousand taels. The matter was reported to the mandarins at Haifong, and soldiers were sent out to arrest the bandits. A reward was likewise offered for the capture of the leader of the band, Lam Tai Kau, but that personage mysteriously disappeared, and it was not until quite recently that information was brought to the official at Haifong that Lam Tai Kau was in hiding at Hongkong. Two lieutenants were instantly sent to the colony and they informed Hon. F. H. May, Captain Superintendent of Police, of the presence of the murderer in the colony. A warrant was issued, and Lam Tai Kau was arrested by a Chinese detective at Yaumati on the 19th November. Rendition proceedings were thereupon instituted.

The *Kobe Chronicle* says:—"It appears that the discovery of the defalcations which are reported to have taken place in the Kobe Customs arose from inquiries made by Messrs. Macy & Co. as to why a certain shipment of tea did not appear among the items in the Daily Report of Exports and Imports. They sent a Japanese employé to inquire how the omission had occurred, and it is alleged that he was "squared" by the Custom-house clerks in the conspiracy, who feared that any inquiry set on foot might result in inconvenient disclosures. He thereupon returned to his employers, it is said, and was able to satisfy them by some specious story why the particular shipment was omitted from the returns. It would be interesting to know whether the recent endeavour by the Customs to suppress the publication in the returns of the names of firms had any connection with this affair; the circumstances are certainly very suspicious. It is stated that to ensure the success of such a scheme, which is supposed to have been in operation since April or May last, there must have been a confederate in almost every department of the Customs, and quite a number of stamps must have been forged. An exactly similar case to the present has, it is said, never occurred in the Japanese Customs Department, and the case appears to be one more proof of the widespread corruption of the Japanese public service, and a remarkable corroboration of the views expressed in these columns that matters are getting worse rather than better. Messrs. Christensen & Co., one of whose employes was said by a vernacular contemporary to have been arrested in connection with the scandal, desire us to state that the man in question, who occupied the position of banto, is not now in their service, having been dismissed at the beginning of last month."

CORRESPONDENCE.

THE "SOCIAL EVIL IN JAPAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with much interest the assertions that have been made, and the discussions that have taken place lately in your paper upon this subject, and should be glad to be afforded space for a few facts that have come within my own experience.

During the course of a long married life in the city of Melbourne, I have frequently heard my husband remark when he has returned from his office at night, or from any place of entertainment, that he could not walk from the street to the railway station without being accosted and solicited at every turn, by the women who frequented the streets at those hours. That is one experience that need never be met with in Japan. Also my female servants frequently complained to me that when returning home at 10 p.m. after their weekly evening out, they were continually accosted and followed by men, and even by gentlemen (to outward appearance) and they very justly remarked, "It is very hard that a decent girl cannot be out at that hour without being insulted. Surely there are enough bad women about the streets—the men might leave a girl alone that they see is respectable!"

That is another thing that need never happen in Japan under existing circumstances.

A few years ago, I returned to Melbourne, taking with me a Japanese man-servant; and as he was an intelligent fellow I was naturally anxious that he should have an opportunity of being shown anything that I thought would be a novelty to him, such as the pneumatic parcels post, telephone, etc., etc.; but to all that was shown him he only remarked with the greatest sang-froid—"Oh! yes, I understand before—have got in Tokyo!"

At last I asked him in despair "Is there anything you have seen here that you have not got in Tokyo?"—to which he replied "Yes, there is one thing I see every Sunday morning which I never saw in Japan." (I must explain that I procured him a lodging with another Japanese settled in Melbourne, who followed the occupation of wood carving in a small house in a lane connecting one of the first streets of the city, at one end, with the Chinamen's quarter at the other, his landlord's house being at the more respectable end of the lane). To continue—"I never have seen in Japan, big police cart come round every Sunday morning, and take away nine or ten girls very drunk; and before policeman can catch and put in cart, girls scream, and use very bad talk, and fight, and scratch, and kick, and bite, and all clothes and hair nearly torn off, and at last policeman take and throw into cart, and lock door, and take away to prison. That is a sight I never see in my country! In Japan are plenty bad girls and women, but never fight and scream in street; if bad, must keep in house."

Considering that my servant was, of course, a "heathen," I think his first experience of a Christian city on Sunday morning, when the bells of a hundred churches were ringing to prayers, was not a very edifying one; and as doubtless similar experiences have come under the notice of all travelled Japanese, it may easily help to solve the problem of the evident distaste shown by the more reflective classes to embrace Christianity, if by doing so they would have to adapt their ways to those they have been witness to in so called "Christian" countries—a reluctance for which no one can blame them, especially as they have always shown themselves ready and willing to assimilate anything they consider for their interest or advancement.

And I am not alone in thinking that if the globe-trotters who come to criticise, and the missionaries who come to convert, the Japanese people, would only stay at home, and expend their superfluous energies in endeavouring to cleanse their own cities, instead of coming to countries where the conditions are totally different, leaving the latter to be altered and improved where necessary, by the laws of the country, as will happen naturally and in due course, they will be doing a better work, and would show more satisfactory results than they will ever achieve amongst a people whose minds are both critical and analytical.

Excusing my card, I am Sir, Yours,

E. S. P.

Dec. 4th, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In what I wrote the other day on this subject I simply expressed my opinion about Colonel Bacon's addresses, I did not believe he was making comparisons, nor do I intend to take

his (supposed) place and do it. I have been in Japan since '83 but have never studied the "social evil" either here or elsewhere and have never claimed to be an authority on it. The statistics I quoted fell into my hand by chance and Colonel Bacon never saw them, and I had paid no attention to them till you brought up the question of quantity. Naturally I looked to the statistics that happened to be at hand, and quoted it expecting it to be taken for what it is worth. I am informed it can be had at Maruya's in Yokohama and if the Editor wants to deal with it he can get one. I take as little interest in the question of comparative prostitution as I would in the question about which of six "niggers" might be the blackest. The "shameless exhibition" I referred to was, not that of the unfortunates but to that of his wares by the proprietor. I never saw any of the prostitute quarters till October of this year, in the large cities of Japan. I do not care to discuss the subject of the systems of dealing with the question. Yet I do not see that segregating it will prevent it being everywhere there may be a demand and supply.

The point I did refer to was this, that in reforms the cause must be dealt with rather than the effects, "From my point of view" prostitution is an effect, not only a "social evil" but a symptom of a social disease, and it must be corrected by constitutional treatment. A factor in the problem is the financial question, which is belittled and ignored by many would-be reformers. Their plan of reform is too limited, and not basic enough.

As I mentioned before, the money question is a large factor, with the parents, the unfortunates, the proprietors, the patrons, and the public. In nothing am I an individualist, or a socialist, but a "composite" of the two. In order that there may be an ideal condition we must have individual rectitude and social righteousness. These two act and react on each other. The Church till the present has paid little or no attention to social righteousness. Again, I am a believer in political righteousness, that is I think that laws establishing and fostering evils should be repealed. Every person who deserves the good and true, should help by his vote to outlaw evil.

So far as I have any standing before the public as a reformer, it is in connection with the twin subjects of proportional Representation and the Single Tax. The former is the "Golden Rule" applied to the representative body, the latter the same Rule, applied to the common inheritance. They both go to the root of matters, dealing with primary causes which when corrected will clear the atmosphere and permit further advances. I have never met an opposer of the Single Tax who showed by his statements on the subject that he understood it, and, Pro, Rep, almost immediately commends itself to any one who studies the subject for half an hour. Speaking about the length of time I have been in Japan I may add that I haven't been here long enough to know of any one reform that the Editor of the *Japan Mail* stands for. Is he one of those who are willing to let well enough alone "as the case may be"? Does he think that "whitewash" will cure all diseases? And in graciously warning me about careless statistics weakening my position with the Japanese, does he speak from his experience in being so widely disbelieved by foreigners and Japanese alike? The questions that I deal with both S.T. & P.R. are live questions in Japan to-day and attracting wider attention every day. Henry George's death is mourned like that of Moses was, because it took place on the eve of victory. Land is necessary to life, and we must be able to live, otherwise we can not live decently.

Yours truly,

CHAS. E. GARST.

44, Tsukiji, December 6th, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I had hoped not to take up my pen again on this subject, but one of your correspondents, "E. S. P.," a lady from Australia, has a good deal to say on the subject from the point of view of the Southern Cross. The gist of what she says is, the same evil in Melbourne is worse than in Japan and that it is bad taste for missionaries to come here to preach, etc. The "social evil" is black anywhere and nothing can be blacker than black. The issue I take with the lady is in her style of logic. She seems to think that Christians should do work at home exclusively. As a matter of fact, about 97 per cent. of all money spent in Christian work is spent where it is raised, the small sum of 3 per cent. seems little enough for foreign fields to us. I wonder if the critic is a Christian. I met a young man at the world's fair in Chicago who criticised my being a missionary in Japan, saying the Japanese were on a higher moral plane than the Americans. I asked him if he were a Christian and he replied "no," to which I remarked, "you are

opposed to the thing itself, not to its geography," he was like the boy run over by a calf—had nothing more to say. Comparisons should be logically made; the heathenism or infidelity of Christian countries should not be put down as Christianity and compared with the best pagan countries can produce. We are willing to compare, if logically done. Compare the God idea in all religions. Compare the exponents of religion, Christ, Buddha, and Mohammed. Compare cosmogonies, compare codes of morals, compare moral life of professed adherents. Compare fruits, as scholarship, charities, action on government and human liberty. Compare sacred books, "the Bibles," of different religions, compare Churches, the Christian Church, the Buddhist Church, the Mohammedan Church, etc. There can only be one outcome, Christ is above them all as Fuji is above the plain. But there are some things in which all nations are alike. They all have an atheistic system of land tenure, for if God made the land for the few and not the many, then he is the God of the latter and not the former. This is the point that Henry George has made as clear as a sun-beam. Man as man and woman as woman, in our cruel, atheistic economic system, to which Christians and heathen alike give their assent, are worth nothing. The rent of land is the measure of what can be extracted from the users of land without the return of any equivalent. This is the "nigger in the wood pile"—the neglected factor that perturbs all social calculations. All the progress of society serves to accentuate the evils of landlordism. Until we take this factor into account, with others, we will reach false conclusions. The trouble with comparative statistics is there is so much that is false in it all it is impossible to obtain absolutely accurate figures. However, it is clear to my mind that Christ has elevated all but woman, and I believe he has elevated her most of all; by this I do not mean that the "social evil" is the sin of one sex, but of both. In this connection in all the brotherhoods of Japan there are shrines of one of the two religions of the country. I am persuaded that in England and America, the reading of the Bible and morning and evening prayers are not regular features of such places.

I respectfully sign my name,

CHAS. E. GARST.

YOKOHAMA GENERAL HOSPITAL.

The annual meeting of subscribers to the infectious and charity wards of the Yokohama General Hospital was held at Keil's Building on Friday afternoon, Mr. A. O. Gay, hon. treasurer, was in the chair, and there were also present Messrs. A. J. Wilkin, A. Dumelin, P. Colomb, and H. Grauert, members of the Committee.

The Chairman read the report of the Committee, and presented the accounts as follows:—

STATEMENT OF RECEIPTS AND DISBURSEMENTS FOR THE YEAR ENDING OCTOBER 31ST, 1897.

Receipts.	
Nov. 1st, 1896.	Yen.
To Balance	1,024.70
Oct. 31st, 1897.	
To Patients in Infectious Ward	1,000.50
" Donations	1,815.00
" Interest, H. & S Bank	23.28
	3,863.48
Disbursements.	
Oct. 21, 1897.	Yen.
By Wages and Expenses, Infectious Ward	1,192.07
" Medical Attendance, Infectious Ward	265.00
" Medicines, Infectious Ward	42.00
" Repairs and New Constructions, Infectious Ward	239.10
" Furniture, Infectious Ward	16.10
" Patients, General Ward	913.60
" Fire Insurance	65.00
" Petty Disbursements	14.75
	2,752.82
By Balance to new account	1,110.66
	3,863.48

E. & O. E.

A. O. GAY,
Hon. Treasurer.

Examined and found correct.

O. KEIL, Auditor.

Yokohama, 25th Nov., 1897.

ANALYSIS OF THE ACCOUNT FOR THE YEAR ENDING OCT. 31ST, 1897.—INFECTIOUS WARDS.

Receipts.	
From 13 paying patients.....	\$1,000.50
" Subscriptions	1,815.00
" H. & S. Bank for interest	23.28
Expenses.	
For wages of staff	\$ 532.00
Charges for food, fuel and other supplies.....	690.07
Medical attendance	265.00
Medicines	37.45
Repairs of fences, etc.	255.40
Prem. Fire Insurance	65.00
Advertising meeting, etc.....	14.75
	\$1,859.67
Charity.	
Fees for indigent patients sent to the General Hospital	\$888.60
Medicines for out-side patients	4.55
	\$893.15
Balance of account Nov., 1896	\$2,752.82
" " 1897	\$2,838.78
	\$1,024.70
	\$1,110.66
	\$3,863.48
Balance to new account.....	\$3,863.48
	\$1,110.66

E. & O. E.

Yokohama, Nov. 25th, 1897.

A. O. GAY, Hon. Treasurer.

The accounts for the year ending October 31st, are now submitted. An analysis of the account is added, which shows in detail receipts and expenses for the infectious wards and the charges for indigent patients sent to the General Hospital upon the recommendation of resident physicians.

The usefulness of the infectious ward is shown by the number of patients admitted during the prevalence of small-pox last winter, and the substantial sum received from first and second class inmates, has greatly helped to maintain this branch of the Hospital. Besides the paying patients there have been a number admitted upon charity.

The condition of the Hospital funds did not necessitate a call upon the community until July last. This realised \$1,815. The previous subscription list was calculated from and after Nov. 1895.

The additions and improvements at the General Hospital under the direction of Dr. Munro, to defray the cost of which special subscriptions were obtained, are now nearly completed and an inspection of the premises will soon be invited.

Mr. Dumelin proposed that the report and accounts as presented, be adopted. Mr. Wilkin seconded the motion and it was carried unanimously.

Mr. R. HAY proposed that the retiring Committee be re-elected. Mr. Quinton seconded the motion, which was carried *nom. con.*

A vote of thanks to Mr. Keil for the use of the room for the meeting, proposed by the Chairman, was carried and brought the proceedings to a close.

SOME NOTES FROM FORMOSA.

(FROM OUR OWN CORRESPONDENT.)

Tamsui, Formosa, Nov. 20th.

THE TEA SEASON.

The tea season has closed. The total production for the season runs about 450,000 half chests, which is about the same as last year. The duty question in America disturbed the market considerably and it is reported that there have been some serious losses in consequence. Japanese as yet have made no serious attempts to enter the tea business either as planters, packers, or exporters, with the single exception of one company which packed some 12,000 half chests and exported *via* Kelung and Japan some 800 half-chests to America. The Japanese Government rendered great assistance in officially endorsing a movement made by the merchants to prevent the export of impure teas. It has been the custom of an occasional unscrupulous Chinese dealer to import inferior Amoy teas, mix them with Formosa and then export the product as pure Formosa Oolong, also to add extraneous matter to Formosas. But the Government has now vested a Committee, consisting of three foreign merchants and four Chinese merchants, with authority to confiscate and burn all such teas found on the market, while the salesman of the same will be fined a sum double the amount named as the value of the teas. Several

seizures of spurious teas were made during the season, and it is quite reasonable to believe that there will be but few attempts made to dispose of false goods on this market during the coming season.

A CHINESE "JOB."

Previous to the arrival of the Japanese, the Chinese Mandarins at Taipei commenced the construction of a wooden steamer at Twatutia with the idea of allaying the suspicions of the Chinese authorities, at Peking who were unable to understand why it was that the Formosan returns were debited a large amount, year after year, for a ship-building yard which built no ships. Without the assistance of foreigners the hull was constructed, and, according to popular report, the Mandarins who desired to make amends for the long non-productiveness of their establishment, were especially anxious that the vessel be a swift craft, and ordered that she be fitted with twin screws with the idea that if one screw would drive the ship at a certain speed, two screws would double it and convert their boat into a regular scorcher. Foreign engineers were then invited to inspect the craft and bid for placing the machinery. Two gentlemen from establishments in Hongkong and Shanghai accordingly visited the island, and after examining the hull put in their estimates in which it appeared that they could promise no more than five knots. This created considerable consternation among the mandarins, who had evidently reported that their off-spring would "make walkee" at a very rapid gait. Extravagant offers, pleadings, prayers were alike of no avail. The engineers were agreed that five knots was the maximum speed to be obtained, and as the Chinese were dissatisfied with that, they returned without either having obtained the order. Work however was continued on the craft by the Chinese until stopped by the arrival of the Japanese. A few weeks ago the vessel was put at auction and sold for some 3,500 yen. It is estimated that at least 30,000 yen had been expended on the hull by the Chinese builder. The affair was launched some days ago and it is reported that she is to be taken to Hongkong in a few weeks.

FOREIGNERS AND THEIR RIGHTS.

The Japanese officials are at present in a quandary as to the advisability of applying the new treaties to Formosa. The inhabitants of the island consist of Chinese and aborigines with a few thousand Japanese and a handful of foreigners. The direct application of the code compiled for civilized nations would work great injury to the Chinese here and no doubt result in continual disorders. In commercial affairs, transfers of land and other civil matters, it is absolutely necessary that the former customs of the Chinese be taken into consideration and that the new order of things be not enforced upon them before they are able to understand them. It might be well that a special code suited to the conditions of the island be framed, but with less than three years experience the Japanese are not yet sufficiently familiar with the conditions of the Chinese to know just what is required. A prominent official informs me that it is very evident that the time has not yet arrived when the inhabitants can to their own advantage be placed under the laws and regulations which the new treaties will bring into force in Japan, and it is not unlikely that the Powers will be asked to take into consideration the present condition of affairs and enter into a supplementary treaty applying to Formosa. This is to be but a temporary agreement, as I understand it, in which foreigners will be granted the same rights and privileges as are contained in the new treaties, but that so far as the native subjects and Japanese are concerned the old conditions will prevail.

GOVERNOR-GENERAL NOGI.

The opposition to Lieut.-General Baron Nogi as Governor-General appears to have subsided. To foreigners who admire his many excellent qualities his retirement from office would be looked upon as calamity to the island. The frequent exchange of officials and shifts of policy to which the island has been subjected, have kept Formosa in an unsettled condition, and now with the establishment of administrative reforms and the appointment of new officials it is to be sincerely hoped that the Cabinet and the Diet will keep their hands off for a sufficiently long period to permit of the present administration being given a fair trial. Many Japanese merchants are especially opposed to Governor Nogi, and it is supposed that they are responsible for the numerous tales which have been circulated ridiculing his Excellency on account of his strict views as to the conduct of his officials. He does not believe that it conduces to official dignity that the Chinese should see drunken officers reeling home from *Geisha* speer, nor does

he believe that Japanese merchants should be permitted to partake of Government funds without full value received. He is outspoken against dishonesty and reckless dissipation. Both exist in Formosa and it is not possible for him to oppose them without making enemies.

OPIMUM.

The Government are at present erecting a very large laboratory fitted with all modern appliances and machinery for the preparation of opium. It does not appear, as has been sometimes reported, that the sale of opium is to be considered as a source of revenue, but that the income thus derived is only expected to be sufficient to cover the Government expenses incurred in controlling the purchasing, manufacturing, and sale. So far the Government expenditures along this line have been greater than the income. It is the desire of the Government to first obtain complete control of the drug throughout the Chinese portion of the island and to restrict its sale by issuing licenses only to those addicted to its use. It is hoped in this way that the next generation will, to a large extent, be freed from the opium habit. It has been suggested that the Government gradually increase the price, thus decreasing the consumption. But such a plan would only be partially effective, as smuggling of opium, which is now not frequently attempted, would be prevalent, and with the lengthy coast line it would be difficult to prevent. That opium is essential to the good health of the Chinese in the island has not yet been proven. The Hakkas, the strongest and healthiest of all Chinese in the island, are rarely opium smokers, and while it would no doubt create great disorder in the island to prohibit the smoking of opium to all, the Government are to be commended for their desire to lessen the consumption whenever practicable. Mr. Montague Kirkwood legal adviser to the Japanese Government, is at present in the south of the island on a tour of inspection.

PROF. BURTON'S WORK.

The investigations of Prof. W. K. Burton, C.E., throughout the island were very complete and resulted in a voluminous report on the sanitary requirements of the island. The Governor-General has shown great interest in the work, and has agreed to put into effect the plans of Prof. Burton as far as funds can be obtained for that purpose. The first work of importance will be the construction of the Kelung and Tamsui (Hobe) water works.

IN THE U.S. CONSULAR COURT.

Before F. J. GOWEY Esq., Consul-General and Judge, and Associates.

MONDAY, December 6th.

THE NATIONAL BANK OF CHINA, LIMITED,
v. MACONDRAY BROS. and LOCKARD.

In this case the National Bank of China, Limited, claimed a sum of yen 16,727.69 from the defendant firm in settlement of balance of account.

The petition of the National Bank of China Limited, the plaintiff, showed as follows:—

1.—The said plaintiff company is constituted under the laws of the United Kingdom, carrying on business as Bankers in London and at Yokohama and elsewhere.

2.—The defendants are a firm of merchants carrying on business at No. 30 in the Settlement of Yokohama and of which firm the members are citizens of the United States.

3.—The defendants kept an account with the plaintiff and became indebted on such account for money lent by the plaintiff to the said defendants in the sum of Eighteen thousand dollars.

4.—To secure the payment of the said sum the defendants on 21st Jan., 1894, made and gave to the plaintiff their promissory note by which they promised to pay to the plaintiff on demand eighteen thousand dollars with interest at 8 per cent. per annum and as collateral security for payment of the said sum hypothecated to the plaintiff certain goods and merchandise and office furniture specified in a list thereof dated 23rd January, 1894, valued at \$6,198 49.

5.—The goods and merchandise in the said list specified were with the consent of the plaintiff sold and other goods from time to time were hypothecated to the plaintiff in the place thereof.

6.—The defendants are now indebted to plaintiff in the sum of sixteen thousand seven hundred and twenty six yen and sixty-nine sen of Japanese currency for money lent as aforesaid by the plaintiff to the defendants and on the 4th of June, 1897, the defendants as collateral security for the payment of the said sum acknowledged that certain goods in their warehouse as stated by them to be of the value of \$3,888.88 were hypothecated to the plaintiff.

The plaintiff therefore prays this Honourable Court:—

1.—That the defendants be decreed to pay to the plaintiff the said sum of sixteen thousand seven hundred and twenty seven yen and sixty-nine sen.

2.—That the plaintiff be decreed to have a lien on the goods, merchandise and office furniture hypothecated by the defendants, and that the said goods and merchandise and office furniture be sold, and the proceeds thereof paid to the plaintiff in part payment of the debt aforesaid.

3.—That the defendants be decreed to pay the costs of this suit.

4.—That the plaintiff may have such further and other relief as the nature of the case may require and this Court may direct.

There was no answer to this petition by the defendants.

Mr. Litchfield appeared for the plaintiff Bank, and stated that the defendant had failed to file any reply to the plaintiff's petition, and plaintiff now applied for decree. Under the Rules of the Court it was required that in suits for sums above \$500, Associates should be drawn to sit with the Judge and he would ask His Honour to draw Associates, and to adjourn the hearing until such an hour as the latter could be in attendance.

The following names were then drawn:—Capt. J. W. Lee, Mr. G. W. Bramhall (absent from port) Mr. R. Abenheim; and as alternatives Messrs. M. Z. Wheeler, H. J. Davidson (in Tokyo) and R. M. Varnum.

The hearing was then adjourned till 2 p.m.

Upon the Court re-assembling in the afternoon, Capt. J. W. Lee and Mr. R. Abenheim were sworn in as Associates.

Mr. Litchfield briefly opened the case for the plaintiff and called Mr. P. C. Potts to prove the claim.

Witness deposed he was accountant to the National Bank of China, with which defendants had an account. Witness identified the signature of Macondray Bros. and Lockard to a promissory note dated 21st Jan., 1894, given for a loan of \$18,000, with a stock list attached. He received the documents from the firm. At that time the firm had only one account, but later on another, No. 2 account, was opened for daily business. The Bank presented a statement of account to their clients every half-year. Witness also identified the signature of defendants' firm to two letters dated 31st December 1896, acknowledging indebtedness to the Bank on that date to the amount of \$16,000 on No. 1 account, and \$1,100 odd on No. 2 account. Witness also proved the statement of account rendered by the Bank for the period from 1st Jan. to 30th Sept. last, which showed the indebtedness of the defendant firm to the Bank on the latter date to be 16,727.69 yen. Nothing had since been paid off this sum and the amount was still owing to the bank.

The documents referred to by witness were filed in Court as exhibits.

To the Court.—The stock set down in the list was now in the defendants' godown and Macondray had the keys. The Bank, however, held a lien on it as security for payment of the loan. Witness thought it probable some of the goods originally hypothecated had been sold.

Mr. Litchfield said he asked for judgment for yen 16,727.69; he did not ask for the lien to be enforced.

Judgment was given for the amount claimed and costs.

BRITISH NAVAL COURT AT YOKOHAMA.

A CHIEF MATE DISCHARGED.

A Naval Court of Enquiry consisting of Jas. Troup, Esq., Assistant Judge, H.B.M.'s Court, President; and Commander Grafton, R.N., H.M.S. *Redpole*, and W. D. Cameron, master of the steamer *Amarapoor*, was convened at H.B.M.'s Court on Tuesday morning to consider certain charges laid by David Anton, master of the British ship *Port Caledonia*, against Thomas Roil, chief mate of the same vessel. The charges were comprised in three counts:—1st, defendant was charged with being intoxicated and disorderly on board the ship on the night of the 1st instant, with disobeying the lawful commands of the master, and being intoxicated, on the 2nd inst.; and, that after having been locked up in his room by the master, on the 1st inst., he broke open the lock of the door with an axe; and 3rd, with being absent without leave and under the influence of drink on the 2nd inst. Accused pleaded guilty to going on board the ship in a state of slight intoxication and to disobeying the commands of the master in the

first count, and also to the second count, but not guilty on the third.

David Anton, the prosecutor, master of the *Port Caledonia*, deposed:—When I went on board at 9 p.m. on the 1st Dec., I asked the steward to get me some supper. Shortly afterwards the mate came into the saloon. I at once saw that he was considerably under the influence of drink. He told me that he had been on shore prosecuting certain members of the crew in the Consular Court and that he would leave the vessel, and had all his effects packed, as it was a made-up job that I should leave the vessel all day in order that he would have to appear to prosecute the members of the crew. I told him there was no job in it, and to come and see me in the morning when he was sober. He denied being under the influence of drink, so I called the second mate and steward as witnesses, and they both admitted that he was. He then said that I was under the influence of brandy. I again called the second mate and steward, who both frankly said I was not. I then ordered him to leave the saloon. He refused and I called the second mate and steward to get him out. He returned, however, and repeated his statement about the made-up job, and said I was a d—d cur. I again called the second mate and steward, who got him as far as the door of his room where he and the second mate stumbled. As soon as he got on to his feet I shoved him into his room and locked the door. He immediately got an axe and hammered at the lock of the door; calling me a son of a —. To prevent the door being smashed, I requested the second mate to unlock the door, which he did with some difficulty, as the lock was injured. A few minutes afterwards the second mate came to me and asked me for \$2 to give to the mate to go on shore. The mate then came to me and asked me for \$5, and permission to go on shore, which I granted, to have peace, but told him to be on board at 8 a.m. on the 2nd. The second mate sent the steward on shore with the mate to try and get a respectable house for him to stop in. He returned on board about 2.30 p.m. on the 2nd and left again about 4.30 to 5 p.m. without permission. During that afternoon Mr. Lowder, who is conducting the defence of Cutlbert in the stabbing case, came on board to collect further evidence. When he went to the fore-castle he found the mate sitting there, under the influence of drink, and made some remarks about it to the second mate.

Accused had no questions to ask the witness.

Witness, to the Court—I was not present when the remarks were made by Mr. Lowder to the second mate regarding the mate's presence in the fore-castle. I was told by the second mate.

Hans Wilhelm Daehner, second mate of the *Port Caledonia*, examined by Capt. Anton—I remember the evening of the 1st Dec. You came on board about 9 p.m. and called me into the saloon to testify as to the condition of the mate. He was under the influence of drink. I did not hear him say that you, the master, were under the influence of brandy. You asked me if you were, and I said you were not. I heard you tell the mate to go out of the saloon. You called me to assist in putting him out. I saw you shove him into his room and close and lock the door. I heard him hammer at the door with some heavy instrument, but could not see what it was. While he was hammering at the door he repeatedly called the master a son of a —. You ordered me to unlock the door. I had to push it open as the lock would not work. I remember coming to you and asking for \$2 to give to the mate. I sent the steward on shore with the mate to find him respectable lodgings for the night. I heard the mate had got permission to be ashore till 8 a.m. on the 2nd. He returned on board some time in the afternoon. When Mr. Lowder came on board the mate was in the fore-castle. He was not quite sober.

Accused had no questions to put to witness.

To the Court.—There was never any difference or quarrel between the first mate and myself. It was an unusual thing to send the steward on shore with the mate. I was not told to do so. I sent him because the mate was slightly under the influence of liquor and I was afraid he might get into trouble.

Francis Rafferty, steward of the *Port Caledonia*, gave evidence corroborative of that given by the second mate, and added that he was ashore all the time with the mate after being sent ashore with him on the night of the 1st. He had a little drink himself and did not like to go back on board till he was quite sober.

Capt. Anton, recalled by the Court—I am not aware that accused has been in any Court previous to this case. The mate was engaged in Liverpool on the 3rd May. The relations between myself and the mate have been generally good during the voyage; there have, perhaps, been some

slight differences, such as might arise between any two men.

This closed the case for the prosecution and the hearing was adjourned till 2 p.m.

Upon the Court reassembling at 2 p.m., accused was asked if he desired to produce any evidence in his defence. He stated that he did not desire to do so, nor to make any statement, beyond what he had said in answer to the charges.

The Court was then adjourned for an hour or so, when the following finding was read by the President:—

The Court finds the said Thomas Roil guilty of disobedience to a lawful command, while under the influence of liquor, and also guilty of disorderly conduct on the 1st Dec. 1897, on board his ship, and that again on the 2nd Dec. he was under the influence of liquor on board.

The Court orders that in accordance with the powers contained in Sec. 483 of 57 and 58 Vic., c. 60, Thomas Roil be discharged from his ship, the *Port Caledonia*, of Glasgow, and that in accordance with the powers contained in said Sec. 483 the costs of the proceedings before this Court be paid by David Anton, the master of the *Port Caledonia*, and he is hereby ordered to pay the said amount accordingly, but he is hereby empowered to deduct the same from the wages of the said Thomas Roil.

Thomas Roil is further cautioned to be more careful as to his conduct for the future.

The expenses of this Court, fixed at £4.17.3, are approved.

THE STABBING CASE ON THE "PORT CALEDONIA."

William Cuthbert, a seaman belonging to the British ship *Port Caledonia*, was brought up for trial in H.B.M. Court for Japan on Thursday, the 9th inst., before Mr. Justice Wilkinson, on the charge that he, on the 20th October last, on board the *Port Caledonia*, then lying in Nagasaki harbour, did feloniously, wilfully and with malice aforethought kill and murder Jules Jerrard.

Prisoner pleaded not guilty, and the following jury was empanelled:—Messrs. F. E. White, P. C. Potts, F. W. Thomas, C. V. Schmidt, and W. W. Campbell.

Mr. Litchfield, Crown Prosecutor, prosecuted and Mr. Lowder appeared for the accused.

Mr. Litchfield, in opening the case for the Crown, said the prisoner was charged with wilful murder and it was for the jury to decide from the evidence produced whether the crime committed amounted to wilful murder or whether they could find that the crime was less heinous than that and could be classed as manslaughter. The circumstances were that previous to the 18th October there were no quarrels between the prisoner and Jerrard. But on the 18th October Cuthbert was in the port fore-castle in the forenoon, about 11.30, and it was deposed by a Frenchman who was lying on his bunk in the fore-castle, that Cuthbert was sick there. The man Jerrard came to the port fore-castle about 3 p.m. The accused also came into the fore-castle and there was a dispute about the mess made by Cuthbert in the fore-castle. It appears from the Frenchman's statement that Jerrard accused Cuthbert of making the mess and a quarrel took place in which Jerrard threw Cuthbert down. On getting up again Cuthbert renewed the fight, and again got the worst of it. After that Cuthbert sat down for a couple of minutes on his chest and then went on deck. Soon after he returned to the fore-castle and after abusing Jerrard struck him in the stomach with a knife. The men then closed, Jerrard trying to defend himself by holding Cuthbert's hand which held the knife. Medical evidence would tell of a second wound but there was no direct evidence to show how it was done. The fatal wound was the one in the abdomen. After the two men were separated by the second mate and others Cuthbert picked up a hammer and tried to strike Jerrard, but was prevented from doing so. Evidence would be given by the first and second mates as to the behaviour of the accused that day. Counsel then proceeded to explain to the jury under what circumstances unlawful homicide amounted to murder, and when the crime only constituted manslaughter. The Crown Prosecutor then called:—

Thomas Roil, who deposed:—On the 18th Oct. last I was first mate of the *New Caledonia*. I have now left the ship. I am a British subject. On the 18th Oct. last the *Port Caledonia* was in Nagasaki harbour. The accused was an able seaman on board the ship. There was another seaman named James Jerrard, who was generally called Jim. On the afternoon of the 18th Oct. I saw the prisoner on deck, bleeding from the nose and one of his eyes. The bleeding was just stop-

ping. I examined his face particularly and asked him what he had been doing and he said he had been fighting with Jim. His face was covered with coal dust, and I told him to go and wash his face and then go down the hold about his duty again. He was watching the natives trimming coals. After I told him to go and wash his face he went on the starboard side of the house. I saw him go towards the fore-castle but did not see him go inside. I went about my own duty. Shortly afterwards, perhaps nine or ten minutes, I heard a scream. It might have been more or less than ten minutes. I had checked off some cargo after Bill left me—one lighter. When I heard the scream I was close to No. 2 hatch. I ran forward on the starboard side and looked aft. I saw the man Jerrard, who sung out "Mr. Roil, I'm stabbed." I went to Jerrard's assistance; he was on deck, close to the fore-castle door, on the outside. I saw the accused near Jerrard. I did not see any one else near him but did not take any particular notice, my attention being given to Jerrard. Accused was standing just inside the fore-castle door with a hammer raised in his right hand; he was just on the point of coming out. It was a long-handled ship's hammer like that produced. (Exhibit No. 1). I laid Jerrard down on the deck and looked at his wounds. As soon as his shirt was pulled up his entrails began to fall out from the wound in the abdomen. I sent for the doctor of the *Immortalité*. Jerrard had his belt, sheath and knife on him. I took the knife from the sheath and gave it to one of the men to keep, and when the doctor came gave it to him. I also got the prisoner's knife afterwards and handed it to the Consul. I recognise the prisoner's knife; have seen it dozens of times on the voyage. Bill and Jim were both in my watch. There had been no quarrels between them before to my knowledge. Both were quiet men. There were nine men in the port watch.

Cross-examination—The prisoner when he told me he had been fighting with Jim may have complained that the deceased had assaulted him without cause. He made some remark but I don't remember the exact words except that he had been fighting. I did not see any bruise on prisoner's forehead. His face was covered with coal dust. I saw one eye was damaged. I was examined at Nagasaki at the inquest and at the preliminary examination of the accused. (Counsel for the defence here read extracts from witness' evidence at the preliminary examination and inquest).

Witness—I did not say at the inquest at Nagasaki that I saw accused go into the fore-castle door when he left me. I saw him go to the door but not enter it.

Mr. Lowder proposed to put in the deposition on this point taken at the inquest, to the effect that the witness saw the accused go into the fore-castle.

Witness—If it is down there so it is probably right, as my memory was fresher then. The prisoner could have gone from where he left me to the fore-castle in about half a minute.

A plan of the deck of the *Port Caledonia* was handed to witness.

Witness—This appears to be a correct plan as far as I can judge. (Copies of the plan handed to the Court and Jury as Exhibit 4.)

Cross-examination continued—I don't know whether deceased had been ashore that morning. I saw him come over the rail on board but could not say whether he had been ashore. I don't know whether he brought a bottle of whiskey with him. I did not notice if he had anything under his shirt or jumper. I went forward. There were two canvas screens on deck. I was standing forward of both when the deceased came up the gangway. I could not say what time this was. I don't remember whether it was before or after the men's dinner, which was about 12.30 that day. I can not say what time elapsed between the coming on board of the deceased and the time Cuthbert's nose was bleeding. I don't know whether the deceased had been drinking on the previous day. He did not smell of liquor when I attended to him after he was wounded. I may have had a drink myself that day, and if so should be less likely to smell the breath of another.

To the Jury—When I saw the prisoner with the hammer in his hand he appeared to be just on the point of coming out of the fore-castle, I judged with the intention of striking Jerrard.

Louis Valesland, whose evidence was interpreted by L. Martinolich, examined:—I am a French citizen and a seaman on the *Port Caledonia*. I was on the ship at Nagasaki on the 18th Oct. I was sick and off duty for three days. My bunk was on the port side, right forward. I was in the port watch. The port and starboard sides of the fore-castle are separated by a partition with a little door in it. I saw the prisoner in the port fore-castle at about 11.30 on the 18th Oct.; there was

nobody in the fore-castle then except Bill and myself. Bill sat down next to Jim's bunk and was sick there. Jim was not there then, he was ashore. Bill remained sitting down till 12.15 and then went and lay in his bunk till called out to work by the chief officer. Jim returned on board in the afternoon and came down into the fore-castle about 3.10 or 3.15 p.m. When Jim came into the fore-castle Bill was not there; he came in about five or ten minutes afterwards. When Bill came into the fore-castle Jim said something to him. I understood what he said. Jim wanted to know who had been making a mess by his bunk. Bill says "It's not me." Jim says "There is no one else in the fore-castle who could have done it only you." Then Bill took Jim by the shoulder and gave him a shaking, Jim said, "What you want," and struck Bill in the eye, and got him down on the chest. Bill sang out, "let me go." After Bill got up Jim went to his bunk to go to sleep, but Bill was after Jim again. Jim says, "What do you want? I think you want to fight, if you want to I'll fight you," and struck Bill a blow with the hand and then took him by the throat and threw him down on the chest, where he kept him a couple of minutes. Bill again shouted, "let me go." Jim said, "I'll let you go this time, but look out for yourself if you come again." Bill went on deck. Jim went to his bunk and put on his belt and went on deck. About two or three minutes passed from the time Bill went on deck and Jim got his belt to go on deck. Jim put one leg outside the threshold of the door, as Bill was coming in. Bill passed inside and then said to Jim, "Look here, you kicked my two eyes, you son of a b—," and then took his knife out of his sheath with his left hand, swung it round and struck Jim in the abdomen. Olsen was at the fore-castle door and came into the fore-castle and took the knife from Bill, saying at the same time, "No fighting here with a knife." Bill then picked up a hammer and raised it to strike Bill, perhaps, I don't know, but Olsen took the hammer from him. The mate and second mate then came up, and Bill lifted a scraper from the deck, but was seized by the second mate who put him in irons. (Scraper put in Exhibit C). I was in my bunk all the time the fight was going on. There was another man in another bunk, a German, who was a little drunk, and asleep. The German got out of his bunk the second time Jim threw Bill on to the chest. When the cutting took place there were only Bill, Jim, and myself in the fore-castle. There had been no quarrels in the port fore-castle during the voyage.

At this stage the hearing was adjourned till 2 p.m. Upon the hearing being resumed the last witness was cross-examined by Mr. Lowder.

Shown the port division of the fore-castle on the plan, witness said:—I recognise the doorway of the fore-castle. My bunk was the one thwartships in the corner, marked with a cross. Mine was the top bunk. Saturday, Sunday and Monday I was laid up, sick with cold and fever. I had not had any whiskey to drink, I never use it, nor spirits of any kind. Jerrard did not give me any spirits to drink that day. He brought a black bottle with a little gin in it to me asking me to take charge of it for him, while he went ashore. I took it and put it under my pillow, and gave it back to him when he came on board again. It was about 10.30 a.m. when Jim gave me the bottle, and about 3.15 p.m. when he received it back again. He offered me a drink in the morning but I told him I did not take spirits. I did not see him drink anything in the morning. When he took back the bottle with the gin in it, he gave a drink to another man. He may have taken a drink himself but I did not see him. I think he gave a drink to a man named Barry, who was in the fore-castle for a time. I lay in my bunk with my head to starboard. When the fight took place I was lying with my head to port. During the time I was laid up I sometimes lay head to starboard. I jumped out of my bunk when I heard the words, "I'll kill you," and saw the knife. When I jumped out of my bunk my head was to port. (Witness here marked on the plan the position of the prisoner and the deceased when the witness jumped out of his bunk).

Mr. Lowder—It is quite impossible for you to have seen the position from the bunk, and I suggest that it was after you jumped out of your bunk you saw it.

Witness—No, I saw both accused and Jim quite well from my bunk. It was about a quarter past 2 when the mate called the accused. Accused had been sleeping in his bunk from about 12.15. His bunk was a top one. He came back to the fore-castle about 10 or 15 minutes past 3. It was 5 or 10 minutes after Jim had come in. I was examined in Nagasaki two or three times. When Jim asked who had made the mess by his chest I did not tell him Bill had done it. I told him I did not know, as I did not want to cause trouble. I

don't know who was "peggy," or clean-up-man, that day. Bill said, "I'm not peggy, and won't clean up the mess." Bill then seized Jim by the arms and shook him. I was then in my bunk with my head to port. Jim was on the bench getting ready to get into his bunk at the time. He came down from the bench on to the floor when he struck Bill and capsized him on to the chest, with his head down on the chest. (Here about half an hour was occupied in cross-examining the witness upon the plan of the fore-castle put in, which he did not appear to understand.)

To the Court—There is only one door from the fore-castle to the deck, and it was over the combing of that door that Jim was standing when Bill came into the fore-castle.

Cross-examination continued—When I heard Bill say, "I'll kill you, you son of a—" I jumped out of my bunk, and it was then I saw the position of Jim, half in and half out of the fore-castle. The blow with the knife was struck as I was getting out of my bunk, immediately after Bill said "I'll kill you." Olsen came in by the port door from the deck and took the knife from the prisoner. The door of the fore-castle is about three feet wide. The whole quarrel arose over Bill's refusal to clean up the mess in the fore-castle.

To a Juror—I did not say anything about it. Jim was a heavier man than the prisoner. He was an Englishman.

To the Court—When I used the work kick I meant a blow with the hand. When Bill threatened Jim he said, "You kick my two eyes." I did not see Jim use his foot on Bill only his hands. When I used the name Bill I meant the prisoner. It was the only name he was known on board the ship. When I used the word Jim I meant the man who was killed. I saw him after he was dead.

To a Juror—Jim was standing on the bench or seat, about 15 inches high, when Bill seized him by the sleeves of his coat and shook him.

To the Court—On entering the fore-castle one must go through the corridor to see the bunks.

David Anton, examined—I am master of the ship *Port Caledonia* and a British subject. The vessel arrived in Nagasaki on the 8th and was there on the 18th Oct. There was a seaman named Jerrard on board. He is now dead, he died on the 20th Oct. I was present at his death. I was away from the ship on the 18th Oct. from 9 in the morning till 5 in the afternoon. Proper attention had been paid to the man after he was wounded.

Cross-examined—I should say that the prisoner was of a kindly disposition, judging from the fact that he had a small kitten on board to which he paid great attention. The stature of the deceased would be, I should say, quite 5 ft. 10, and strongly built; undoubtedly a much stronger man than the prisoner, who would not have much chance with him in a fight.

To the Court—My ship belongs to Glasgow and is under the British flag.

John Olsen, examined—I am a Norwegian subject and am a seaman on the *Port Caledonia*. I was on board the ship at Nagasaki on the 18th October. I belong to the starboard watch. On the afternoon of the 18th I was walking the deck, when I heard Jim sing out "I'm cut!" I ran to the fore-castle door on the port side and saw the men there, Jim and Bill. Jim is the man who is dead and Bill is the prisoner. The two men were inside the fore-castle, Jim nearest the door. They were standing side to side with about half a foot distance and a knife between them. Bill had the handle of the knife in his right hand and Jim had hold of the blade with both hands. I separated the two men, and the knife fell down on the fore-castle floor. I picked up the knife afterwards, when the trouble was over. When the knife fell from Bill's hand he picked up a hammer and held it up, threatening Jim. I grabbed Bill's arm and the hammer fell on the deck. The knife produced (Exhibit 3) is the one I picked up—Bill's knife.

After a very brief cross-examination by Mr. Lowder, conducted almost in the dark, the Court adjourned till 2 a.m. on Friday, it being also arranged that before that hour the jury should visit the *Port Caledonia*, taking the plan of the ship with them to compare.

DISTRESSING SUICIDE IN YOKOHAMA.

HONGKONG MASTER-MARINER CUTS HIS THROAT.

A very sad case of suicide occurred in Yokohama during the early hours of Thursday morning. Capt. Waddilove, late of the *Yuen Sang*, a well known steamer running between Hongkong and Manila, who came to Japan about the 19th of November in a shocking bad state of health, was found by the bed-room boy lying in bed, with his

throat cut and both wrists hacked about. Life had been extinct for some hours. Jas. Troup, Esq., H.B.M. Consul General and Assistant-Judge, acting as Coroner, summoned an inquest, which sat at the British Consulate at 2 p.m., when the following jurymen investigated the circumstances attending the sad affair:—Messrs. F. H. Bull, W. K. W. Wilson, and A. R. G. Clarke. Having been sworn they viewed the body, removed from the Club Hotel to Messrs. Sibbitt's mortuary rooms, after which the following evidence was taken:—

Dr. Stuart Eldridge, sworn, deposed—I saw the body of William Waddilove in the presence of the jury. I was called to see the body about six o'clock this morning at the Club Hotel. I was taken to see deceased by Mr. Sizem. He did not know whether the man was actually dead or not. I found the body in a position of repose, undressed. There was a deep wound in the front side of the throat, which had severed the large vessels on the left side. Upon the front of both wrists were incisions of such a character as to convey to my mind the impression that the man endeavoured to sever the vessels of the wrists first, but this was not fully resorted to because of the shorter and quicker method of cutting the throat. Upon both arms above the incisions in the wrist were numerous slight superficial cuts that were evidently made by a very unsteady hand. Upon a small table to the left of the bed, at the head of the same, lay a bloody razor, open, which I now produce. (The razor was handed to the jury.) The left hand of the deceased, as he lay on his back, with arm extended, being very near the razor. From all the circumstances of the case and the position of the body, especially the nature of the injuries inflicted, I have no doubt that death was of a suicidal character.

Mr. Bull—I should like to ask whether the cuts on the arms could not have been inflicted in self-defence.

Dr. Eldridge—That could not be possible.

Mr. Wilson—Could you say whether the cuts were inflicted with the left or right hand?

Dr. Eldridge—They might have been done with either hand, but I really could not say. The cut in the neck might have been inflicted by either hand.

Mr. Clarke—The razor, judging from the cuts, may have been in both hands?

Dr. Eldridge—A man may be ambidextrous. Then again, death from a cut throat is not so quickly brought about that it would be impossible to shift the razor from one hand to the other. Still death would have occurred very rapidly after the incision on the throat. Life had been extinct three or four hours when I saw the body—the man having been well wrapped up in bed. I saw it about 6 o'clock.

The Coroner—Might it have been double that time?

Dr. Eldridge—I think not. The time I allow is three or four hours.

Mr. Wilson—How were the bedclothes? Disturbed?

Dr. Eldridge—Undisturbed. He lay in a position of repose. The right arm was partly extended, lying on the bed-clothes; the left arm, almost at right angles with the body, extended, so that the hand was just above the front edge of the small table at the head of the bed.

The Coroner—Was there any smell of intoxicating liquor about?

Dr. Eldridge? I noticed nothing.

Mr. Wilson—How was he dressed?

Dr. Eldridge—Partly undressed; in the same condition in which we saw him at the mortuary.

Mr. Bull—Death was undoubtedly caused by that wound in the throat?

Dr. Eldridge—Yes, undoubtedly.

Eugene V. Sizem, sworn, deposed—I am manager of the Club Hotel. The deceased, William Waddilove, came to stay at the Hotel about the 17th November. He was away three days, about the 29th November; with that exception he was living at the hotel regularly. I last saw him alive about 3 days ago. He came into the bar and remained there till 12 o'clock. When he left the bar he was so shaky that the European on watch asked him what was the matter. He said, "From to-morrow I won't drink any more."

The Coroner—Did you hear that?

Witness—The European, Mr. Ham, reported this to me next day. I forbade the servants to give him any more drink. Last night, about a quarter past eight, while I was in the bar, the boy brought in a chit from the deceased, the signature of which was quite illegible. I then forbade the boy to give the deceased any more beer. I did not see the deceased then. The chit was for stout, and the number of the room was legible under the signature. It was room No. 39. This morning, at half-past five, the bedroom steward entered my room and told me that the

visitor in room No. 39, had committed suicide. I wrote immediately to Dr. Eldridge, and to Mr. Sharp, who had introduced deceased to me as Capt. Waddilove. Mr. Sharp came first and then went to meet the doctor. When Dr. Eldridge came I entered the room for the first time. Another visitor, Mr. Marques, who was leaving for Kobe by train, passed through the office when I was writing to the doctor and Mr. Sharp. I accompanied Mr. Marques to the room. He looked in and when I asked what had happened, he said he could not enter the room, as he was foreigner, until the doctor came. I did not look into the room then. After that Mr. Sharp came and then the doctor came up alone, Mr. Sharp having missed him. I accompanied the doctor to the room, and remained at the door. As soon as the doctor's examination had finished, Mr. Sharp arrived. We left the room together. I only saw the body as I stood looking in from the door-way.

Mr. Bull—I should like to know how the watchman found the matter out?

Witness—It was the room boy who discovered the body. He is present in the Consulate. The boy reported to the steward, and the steward passed the report on to me.

Mr. Wilson—Was the light burning when you went to the room?

Witness—Yes. When I asked the boy why he had entered the room, he said it was because he saw the light burning.

Mr. Bull—We do not know anything of deceased's movements from 8 o'clock.

Witness—I do not know anything after the chit was brought to me. This chit was for one bottle of stout; but the boy brought back two empty bottles. On the chit I therefore wrote "2" instead of "1" and I initialed it "E.V.S."

Mr. Clarke—Can you tell whether he left his room yesterday?

Witness—I think he did not.

Mr. Clarke—Did you send up his meals?

Witness—He could hardly eat anything. For the last few days he had hardly anything to eat.

Mr. Clarke—Except refreshments?

Witness—Yes. The liquors that he ordered were taken to his room. I think it was four or five days ago that he got up and came to the office and asked me to let him have a glass of whiskey. Following the orders that I had received from Mr. Sharp, I refused.

The Coroner—He was usually in bed then?

Witness—Yes.

Mr. Clarke—Did he then appear in a rational state of mind.

Witness—No. He appeared as between two liquors.

Mr. Clarke—Did he appear as if his mental equilibrium was upset?

Witness—He did not appear like a sober person. It was forbidden that he should have liquor except soda-water or beer.

Mr. Bull—Did he after this incident five days ago, have any liquor?

Witness—No, not to my knowledge. A'l the liquor—beer—he had was served by me. He has not been in the dining-room for the last nine or ten days.

The Coroner—Was solid food served to him in his room?

Witness—Very little.

The Coroner—Any?

Witness—I saw food going to his room sometimes.

Mr. Bull—Can you give us any idea of the quantity of beer served to him, during the last five days?

Witness—There might have been 6, 7 or 8 bottles of beer a day.

Mr. Clarke—And no solid food?

Witness—No. He also was allowed soda-water. Mr. Wilson—Was there only one boy serving that room?

Witness—Yes, that is so. The boy that will give evidence is the one who served him and found him in the room this morning.

To Mr. Wilson—I believe deceased went out of the Hotel the day he asked me for whiskey.

Ban Hyokichi, bed-room boy employed at the Club Hotel, sworn, deposed:—I attend on rooms 36 to 43 at the Hotel. I last saw the occupier of Room No. 39, alive last night. At 7.30 o'clock he had some English beer. He ordered it through me. Deceased signed a chit for it. He wished to leave the chit to sign till the morning, but I insisted on it being signed at once. Deceased signed for two bottles, I believe. He had one bottle at six o'clock, another at 7.30. I was not called any more after that, and did not see deceased again. This morning, I was up early in order to wake up the visitor in No. 36, who was leaving for Kobe by train. I knocked at the door of No. 36 a little before half-past five. I then started cleaning up the passages. Every morning I was in

the habit of going to room No. 39, as the occupant always ordered something to drink. I usually knocked at the door, and he would say, "Come in." On this occasion, I knocked at the door and there was no reply; so I opened the door and saw the deceased lying in a pool of blood—the bed was covered with blood, a lot of blood. I shut the door and ran straight down to tell the steward. The steward told the manager, and then he told me to go back and have another good look. I was afraid, but I knocked, opened the door, looked in, and said, "Danna danna," but there was no reply. The doctor came shortly afterwards, and I went in with him. I lit the candle and held it up while the doctor examined the man's throat. After this I locked the door and gave the key to the manager. The gas was burning when I first knocked at the door this morning.

Mr. Bull—Did you always find the gas burning when you went to the room?

Witness—I was always left burning every night.

Mr. Wilson—Was he in bed when you went there at half-past seven last night?

Witness—He was always in bed.

Mr. Wilson—Had you seen this razor in the room before?

Witness—No, I had never seen it before.

The Coroner—Well, did you see it this morning?

Witness—I have not noticed a razor before, but when the doctor came in the razor was discovered, covered with blood. The doctor took up the razor, which was lying on the night table by the bed side, and put it in some paper.

Mr. Clarke—When did you last take food to him?

Witness—About 12, noon, yesterday. deceased rang, and I went upstairs. He asked for whiskey, but I said I was forbidden to supply that. Then he asked for beer and added, "Boy, bring me some bread and butter and soup." I took those things up.

Mr. Clarke—Was the deceased in the habit of shaving? Did you take him hot water?

Witness—I never saw the razor before. I never took shaving water to him. I never saw him shave.

Mr. Wilson—Do you know what quantity of food and drink were supplied deceased during the past three days?

Witness—I know what food and drink were supplied. Yesterday four small bottles of beer were taken up, and also bread and soup. The day before he neither drank nor ate anything. Possibly he may have had a whiskey and soda which the small boy under me may have taken up. For the last three days he has practically eaten nothing. I saw him eat the bread and soup yesterday. The night before last, the deceased got up, about half past six, and went out. About half past five yesterday afternoon, I was called to room No. 39 and told to turn the sheets. I did so, and found them all wet. I offered to change the sheets, but deceased said "Never mind, can do."

To Mr. Wilson—I do not know if deceased left the hotel when he went out of the room the day before yesterday.

Mr. Clarke—Can you tell us whether deceased was visited in his room by any one except Mr. Sharp.

Witness—I did not see anyone there, except Mr. Sharp.

Harry James Sharp, sworn, deposed—I am a resident of Yokohama, living at No. 60, Main Street. I knew the deceased, William Waddilove. I last saw him alive on Tuesday evening, between 5.30 and 6 o'clock. He was then in his room at the Club Hotel. He was not completely dressed, but was not in bed. He was a master mariner, formerly in the employ of Messrs. Jardine, Matheson and Co., master of the *Yuen Sang*, running between Hongkong and Manila. He was thus employed until the 5th of October, this year. He arrived here by the *Kobe Maru*, three weeks to-morrow, and put up at the Club Hotel. I saw him in the shell at the mortuary to-day. I was sent for by the manager of the Club Hotel this morning, by note. It ran:—"Dear Mr. Sharp. Please come round at once, I have bad news of the Captain." I went round immediately, saw Mr. Sioen and asked what was the matter. He said, "The steward tells me that he is covered with blood." I asked if a doctor had been sent for, and he said yes. I thought to myself that it would be as well if I went and saw Dr. Eldridge, and so I went round to his house. In the meantime he had gone to the Club Hotel. On my return he told me he had seen the body, and that the deceased appeared to have been dead some hours. I did not enter the room to see him. The doctor said the deceased had committed suicide. The body viewed by the jury, I recognize as the body of William Waddilove.

Mr. Wilson—Was he a man likely to commit suicide; was he depressed at all?

Witness—Yes, he has been very much depressed during the past few days. He has been drinking, but not so much the past few days. He has not been in good health, having been much broken up. I have only seen him five or six times during the past few years. He has been in trouble lately, I well tell you what it was. He received a notice of dismissal from Jardine, Matheson's soon after he arrived here, and that worried him a great deal, as he had been with them for some 18 years. He was quite rational on Tuesday when I saw him, and much better than when I had seen him before. I was there several times on Tuesday, the last time about 5.30. He then told me that he would be round to see me next morning. I was expecting him all day yesterday, and should have been round to see him except for pressure of business. Yesterday was the only day I missed seeing him since he has been staying at the Club Hotel. I do not know whether he had a razor of his own, but should think it very likely, as he had a dressing bag. I have never seen a razor in his room.

The Coroner said he would not detain the jury by summing up, the evidence being so fresh in their minds. They had to find when, where, how, and by what means the deceased came by his end.

The jury retired, and after a short interval brought in the following verdict:—

We find that the deceased William Waddilove came by his death in the early morning of Dec. 9th, at the Club Hotel, Limited, No. 5, Bund, by cutting his throat with a razor whilst in a state of temporary insanity.

BRITISH CONSULAR REPORT FOR NAGASAKI.

Mr. Gerard Lowther has transmitted the following report on the trade of Nagasaki for 1896 drawn up by Mr. Consul Longford, to the British Foreign Office:—

VALUE OF TRADE IN 1896.

The value of the foreign trade of Nagasaki during the year 1896 amounted to 1,623,740l., consisting of:—

	VALUE.
Imports	£1,087,703
Exports	536,037

The aggregate value and that of imports both considerably exceed those ever heretofore attained in any one year, and show that Nagasaki has had its full share in the increase of the whole foreign trade of the Empire during the past year. The export trade has not increased in the same ratio, its sterling value in 1896 having been substantially surpassed in some previous years; and while in the course of 10 years the value of imports in local currency has grown fully seven-fold, that of exports shows very little advance on the value of 1887. The character of the foreign trade of the port of Nagasaki has, in recent years, changed to a considerable extent. Until 1893 the value of exports always exceeded those of imports, in some years very considerably.

INCREASE OF IMPORT TRADE.

In 1893 that of imports for the first time gained a slight advantage; in the two following years this advantage increased in each year to about 2,000,000 dol., while in 1896 it has still further grown to nearly 5,000,000 dol. In their productive capacity, as far as it can be testified by what they are able to spare for abroad after their own requirements are satisfied, the people of the port of Nagasaki remain almost as they were 10 years ago. Their requirements from abroad have at the same time so increased that to satisfy them they find it necessary to spend seven times the amount of their own currency that they did 10 years ago, the result being that in 1896 their purchases exceeded their sales by over 5,000,000 dol.

The difference against Japan has, however, no real existence. Nagasaki is, of all eastern ports, perhaps that which is most frequented by foreign men-of-war of all nationalities, and it would not be an excessive estimate to say that fully 1,000,000 dol. are annually spent in the port by their crews and on the purchase of supplies, a great portion of which goes into Japanese hands directly or indirectly. Large sums are also disbursed by mail and other merchant steamers for supplies, and by tourists and other temporary residents, especially by Russians, large numbers of whom from Vladivostok are now making the port a winter residence.

But in addition to Nagasaki there are other ports which furnish an outlet for the productions of southern Japan, the principal being Shimonoseki,

Moji, and Kuchinotsu, all of which are largely visited by foreign shipping, though closed to the foreign import trade, and all three may be considered as subsidiary ports to Nagasaki. The value of the exports from these ports in 1896 was:—

FROM	VALUE.
Shimonoseki	\$3,315,156
Moji	2,811,924
Kuchinotsu	1,808,545

Total.....\$7,935,625

Equivalent in sterling to 839,692l.

When this amount is added to that previously given of the exports from the port of Nagasaki, alone, it brings the total value of the whole export trade of southern Japan in 1896 up to 1,395,729l.; of the whole foreign trade to 2,483,432l., and it leaves a balance of trade in favour of Japan of 308,026l.

The value of the direct import trade of Nagasaki amounted in 1896, to 1,087,703l.

During the five preceding years the values were:—

YEAR.	VALUE.
1891	£488,689
1892	438,237
1893	458,301
1894	579,064
1895	680,852

The value in 1896, therefore, exceeded that of the immediately preceding year by nearly 407,000l. and the average of the preceding four years by 596,630l. There appears to be every reason to hope that the present increase may be permanent, the items in which it is most marked being of such a nature that a continuing demand may be looked for them, a demand which cannot be met by Japan herself, and one also which is not likely to be crushed by heavier import duties than have heretofore been levied.

Of the whole increase, that in goods of Western (European or American) production amounts to 285,000l.

The import of English coal shows a marked decrease, caused principally by heavy stocks carried over from the preceding year, but with the exceptions of this and cotton and woollen manufactures, every item mentioned in this section of the import list was imported to a greater value in 1896 than in 1895.

The import of cotton and woollen manufactures has always been insignificant in Nagasaki, and it may now be said to be almost non-existent, while with Japan more and more supplying her own requirements in cotton yarns, there can be very little expectation of any demand for English cotton spinnings or weavings in the near future. And while much is said, in Australia especially, as to the hope of some day creating a demand in Japan for wool and woollens, so far the people in Nagasaki fail to display the slightest tendency to abandon their own cottons and silks either for clothing or bedding purposes in favour of woollen productions. In 1896 they were satisfied with 7,000 yards of cheap flannel and 18,000 yards of cloth, while if they use blankets at all they must be obtained entirely from other ports in Japan. With a damp treacherous climate, such as is characteristic of Nagasaki to a far greater degree than the northern ports, and with a people, the greater part of whom are fairly prosperous, it might have been expected that here, if anywhere, the superior sanitary merits of wool as bedding and clothing should become apparent, but the people here are more conservative both in customs and ideas, it might be added in superstitions also, than in other ports, and what has been good enough for their fathers remains equally so for them. In miscellaneous textiles (satins, silk piece-goods, and crapes) there has been some increase, but the whole import, as compared with that of Yokohama or Kobe, is very trifling. In kerosene oil there was a substantial increase in the import; the same was the case in flour from the United States, and in provisions, while four steamers were sold at the port during the year.

But for the main increase we must look to metals, and what may perhaps be termed the kindred items of machinery, boilers, and locomotives, and it is in their case that expectation may be held of any permanent increase in the value of imports.

The local industries are coal-mining, cotton spinning, and ship-building. The few others pursued, with the exceptions, of course, of those of agriculture and fishing, such as the manufacture of porcelain and the weaving of floor matting, are, though both capable of much development, still very insignificant, but the three first-mentioned are both flourishing and increasing. Two of them will always require renewals and additions to machinery, and in the third both machinery and metals will have to be furnished in greater quantity

if the industry continues to grow as it is doing at present.

The extension of the railway system in Kiushiu is proceeding slowly, but still proceeding, and locomotives, railway materials, and rail iron will therefore continue to appear among imports for some years to come. The whole value of metals imported in 1896 amounted to 225,629*l.* as compared with 49,712*l.* in 1895, an increase 175,917*l.*, and that of locomotives, machinery, and boilers to 75,910*l.* as compared with 28,928*l.*, an increase of 46,982*l.*

The greater part of all these articles were obtained from Great Britain, and the total increase in the whole import trade of Western productions in 1896, as compared with 1895—the increase in those from England alone amounted to over 290,000*l.* Imports from France and Germany to Nagasaki are very insignificant, and while those from the United States reach a fair figure, the main items are kerosene oil and flour. So far as Western manufactures are concerned, Nagasaki has hitherto satisfied its requirements to so large an extent from England that it may be said to do so entirely.

The increase in the value of the import of goods of Eastern production amounts to 122,000*l.*, the principal items in it being raw cotton, sugar, and oilcake. There are five cotton spinning factories in Kiushiu which take their supply of imported raw material from Nagasaki, and six on the mainland which do so to a limited extent. The whole import is practically from Bombay and China, the quantity obtained from America being infinitesimal. White sugar is obtained entirely from Hongkong, and forms the bulk of the imports from that colony.

The exports trade of Nagasaki shows small signs of advance, its values for the past six years having been:—

EXPORTS.

Year.	Value.
In 1891	618,358
In 1892	481,480
In 1893	413,339
In 1894	374,406
In 1895	459,787
In 1896	536,037

The values, however, in local currency, which to the native is the sole standard, present a better aspect; the exports in 1891 having amounted to 3,842,222 *dol.*, and in 1896 to 4,948,028 *dol.*, and as before remarked, much money has been brought into the port from abroad which does not appear in the customs returns.

On the whole, the people of the district can have no reason to feel dissatisfied with the results of their commercial dealings with foreigners. All classes are characterized by an air of prosperity far beyond that which appeared in former years, and while prices of both the necessities and the luxuries of life have risen during the past three years by leaps and bounds, the wages of the working classes have risen at the same time in full proportion, and employment for all at the increased rates is never wanting.

The export of coal, still as heretofore the principal product of the district, has reached 404,215 tons, and to this must be added that from the subsidiary ports, viz:—

From.	Quantity.
	Tons.
Shimonoseki.....	427,536
Muji	647,350
Kuchinotsu	439,339

making a total export from the whole Consular district of Nagasaki of 1,999,440 tons. It may be doubted whether this export can continue to its present extent.

LABOUR DIFFICULTIES.

The increased cost of labour is being so acutely felt at the principal mines, that a movement is now on foot to replace all the Japanese workers by coolies imported from Korea, and it is not only in its increased cost that the labour difficulty is making itself apparent both in the mining and in other industries. The docility, patience, and subordination, which formerly were so characteristic of the Japanese workman, are now not only things of the past, but they have been replaced by the opposite qualities to an extent which is rapidly making him as truculent, arrogant, and exacting as any of his fellows throughout the world. Strikes, formerly unknown and unheard of, are now of by no means infrequent occurrence on the part both of skilled workmen and labourers in all trades. They are accompanied by the worst features of those in Europe, boycotting, picketing, and assaults on black-legs, and in one very recent instance, in the immediate neighbourhood of Nagasaki, a considerable force of police and strong measures were required to restore order and quiet among a large body of labourers, half of whom had struck and half were willing to accept their employers' terms.

An increasing quantity of coal is being required for industries in Japan itself, and greater local demand accompanied by increased cost of production combine to raise the price so much that now but a small margin of difference is left between the cost at which coal can be laid down in Manila, Singapore, and Hongkong from Australia and from Japan. Were it not for the protection that will be shortly afforded by a heavy import tariff, a further advance of the present price of Japanese coal would enable that from Australia to compete advantageously with it in the open ports of Japan itself.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE AUSTRIAN TROUBLES.

London, Dec. 2.

The Ministry formed by Dr. Baron Gautsch is looked upon only as a stop-gap Cabinet.

Serious riots have occurred in Prague, originating between the Germans and Czechs.

London, Dec. 3.

There has been renewed serious anti-German rioting in Prague and at other places in Bohemia. Twelve battalions of infantry have been requisitioned for the purpose of preserving order, and in frequent collisions between the mob and the military, the latter have fired upon the people, killing several of them.

London, Dec. 4.

Martial law has been proclaimed in Prague and the garrison has been largely reinforced.

London, Dec. 6.

Although Prague is quiet at present, outbreaks occur in other towns in Bohemia, sometimes by Germans and sometimes by Czechs, in accordance with the preponderance of the nationality of the place.

The political situation at Vienna has but little improved, and it is believed that something approaching an absolute Government is pending.

OPENING OF THE GERMAN REICHSRATH.

London, Dec. 2.

The Emperor William, speaking at the opening of the Reichsrath, declared that the German navy as at present constituted was entirely inadequate to the requirements of the empire, and that, though they had no desire to compete with the first-class naval Powers, Germany must have a navy sufficiently strong to enable her to maintain the prestige of the empire abroad. Continuing, he said that a force had been landed at Kiao-chow to obtain reparation for the murder of two German subjects in China and to prevent the repetition of similar lamentable occurrences in the future. After the reading of the Speech at length, the Emperor again spoke, urging upon the deputies the necessity for co-operation in obtaining an increase in the navy, thus assisting to uphold the honour of the empire abroad, for which purpose he had not hesitated to offer his only brother.

London, Dec. 7.

The German Naval Bill has been introduced in the Reichstag, strongly supported by the Government. Foreign Minister von Bulow, in referring to the Kiao-chow affair, alluded to the constant grievances with China, with whom, nevertheless, Germany desired to preserve friendship, but could not allow China to think that she can be permitted to treat Germans differently from any other Europeans. Germany was also desirous of respecting the interests of other Powers, as she was confident of their desire to respect hers.

MORE GERMANS FOR CHINA.

London, Dec. 4.

The squadron of cruisers shortly leaving for China will probably take extra complements of Marines for the occupation of Kiao-chow.

London, Dec. 6.

The squadron of German cruisers shortly leaving for China will take 1,400 extra Marines for Kiao-chow, also field artillery and a number of machine guns.

London, Dec. 7.

The German force for Kiao-chow has been increased to 4,500 men.

London, Dec. 8.

It is understood that China regards the occupation of Kiao-chow as unjustifiable and contrary to international law. China will never consent to the Germans remaining on her territory, and will regard as an unfriendly act the recognition by the Treaty Powers of any annexation of territory by Germany without China's acquiescence.

ANOTHER STORM.

London, Dec. 4.

Another heavy gale has visited the British coast, during which the lifeboat at Margate capsized and nine of the crew were drowned.

TURKEY AND GREECE.

London, Dec. 6.

The Treaty of Peace between Turkey and Greece has been signed at Constantinople.

THE AFGHAN FRONTIER.

The Kurram Valley Force has advanced into the Chamkaum Hills, where, in the sharp fighting that took place, Lieutenant Battye, of the 6th Bengal Cavalry, was killed, and three officers and fourteen men wounded.

THE LONDON SCHOOL BOARD.

Lord Reay (Baron Donald James Mackay, G.C.S.I., G.C.I.E.), has been elected President of the London School Board.

GERMANY AND HAYTI.

London, Dec. 7.

Two German cruisers have arrived at Hayti and have presented an ultimatum demanding payment, within eight hours, of an indemnity to a German subject named Lueders, for wrongful imprisonment. The population became greatly excited, and the French and German residents took refuge on the ships lying in the harbour.

London, Dec. 8.

Hayti has complied with the German demands.

MR. MCKINLEY'S MESSAGE.

London, Dec. 7.

Mr. McKinley, in his Message to Congress, insists upon the absolute necessity for reform in the currency and banking system of the United States, and says that Spain must be given a reasonable chance of realizing her proposed reforms, and that the United States will not intervene forcibly unless the necessity for so doing is manifest. Continuing, the Message says that the whole world hoped that the labours of Mr. Wolcott would still result in an international agreement on the silver question that has been recommended, and announces the definitive annexation of the Hawaiian Islands.

THE FRENCH IN AFRICA.

London, Dec. 8.

A French expedition, under Major Marchand, bound for the Nile, has been massacred at Bahr Ghazal, and only a remnant escaped.

Correct solutions received from P.E.F.S., J.W.E., and D.D.

A correct solution of Problem No. 334 reaches us from our good friend, O. Balk, from far off New Zealand. Our ex-Champion is doing good work in his new Club—the Otago C. C. of Dunedin—of which he is now the Vice-President. In the Championship tourney that is now in progress he is also showing up well although opposed to very much stronger players than our local cracks.

ANSWERS TO CORRESPONDENTS.

S. T.—Will let you know immediately the copy arrives.

F.—An interesting position, but we have seen it in *Hoffer's Monthly* for May 1895.

PROBLEM No. 350.

By SCHIFFER.

(From Wiener Schachblatt.)

White to mate in three moves.

NOTES FROM ABROAD.

A chess match is now being played in Berlin, between D. Janowski and Carl Walbrodt for 1,000 marks a side. The contest grew out of a challenge which followed the recent international tourney held in the German capital, in which the two contestants were prize-winners. The match is for six games. The first game, played on the 4th Nov., resulted in a draw after forty-four moves had been made. The second game, played on the 6th was won by Walbrodt after forty-five moves. The third game, was drawn, while the fourth game, was won by Walbrodt and the fifth game, by Janowski. The score now stands:—Walbrodt 2, Janowski 1.

D. Janowski is of Polish extraction, but has been a resident of Paris so long that he is claimed by France. He is of the dashing, impetuous style, and has played some very brilliant games. He won fifth prize at Nuremberg, was unplaced at Hastings, and secured sixth prize at Leipzig in 1894. Carl August Walbrodt was born November 28, 1871, in Amsterdam, but he has been a resident of Berlin since he was a child, and as he is of German parentage he is claimed by Germany. He is in business with his brother, and does not depend upon chess for a living. Walbrodt has been characterized, as a natural player, not a book player. He joined a chess club when he was 19 and won first prize in the club tournament without any preparation. He divided fourth and fifth prizes at the Dresden tournament of 1894, not losing a game. He was unplaced in the Hast-

ings tournament of 1895. He divided seventh prize in the Nuremberg tournament of 1896 with Schlechter. Hoffer said of him then:—"His strength is passive; somewhat similar, but in a lesser degree, to the form of Tarrasch. Powerful in defense, but without initiative, he keeps his game together and shapes it safe and sound."

The following rather comical story is told of the two comedians, Sothern and Florence. The pair dropped into a New York coffee house, and observing that a couple of chess players had abandoned a game as drawn and left the room, they sat down at the deserted table and silently gazed at the board. In a short time it was whispered around that the two famous actors were playing a game of chess, and the table at which they sat was speedily surrounded by interested spectators. Ten minutes rolled by without a move being made, though both gentlemen seemed to be deeply interested in the game. Florence assumed a look betokening great mental effort. His hands clutched his forehead with a violent pressure, and his corrugated brow showed how fierce was the mental struggle within. Sothern, too, put on a puzzled look, as if Dundreary was suffering from a withered incumbered diet. The spectators waited patiently for half an hour for a move, but finally one, who had fidgeted around and looked at his watch a dozen times in ten minutes, timidly asked:

"Whose move, please?"

At this interruption Florence scowled, and Sothern looked up with a countenance stupidly grave and remarked:

"Oh! we do not play Chess: never learned the moves."

And each one of the deeply interested spectators, upon this announcement, had business that called them hurriedly away, and the faces of the sedate jokers speedily relaxed into smiles as they agreed to move up to the bar. The game was well played and the pair evenly matched.—*Sunday Call*.

The Steinitz Testimonial netted about \$500 (gold).

"Pillsbury and Charousek, the winner to play Lasker;" this is the latest Chess item of special interest.

Washington possesses a blind chess player in Walter L. Campbell, who hails from Youngstown, O. He lost his sight completely at the age of 5, but since has learned the game of chess, and in point of ability ranks nearly first class among the players at the capital.

The great international Vienna chess congress to be held on the occasion of the Emperor Francis Joseph's jubilee next year, will begin in April or May next. There are to be twelve prizes, the first to be of the value of 4,000 guildens, about *yen* 4,000. Each competitor will have to play two games with every other competitor. The entrance fee will be 100 guildens. The congress is to be on an unprecedentedly grand scale, and will be the most important one ever held.

One of the events of the London chess season just opened was a team match between the East and West of Sussex on ninety-three boards.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

Our readers will remember that this Tourney concluded a month or so ago, "Pakeha" winning the prize, but that Game 10, Nemo v. Fardel had not then finished. This game has just been decided in favour of Nemo his opponent resigning on the 22nd move. Below is the score:—

GAME No. 350.

White—Nemo.		Black—Fardel.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	12 R x Kt	B x R ch
2 P Q4	P x P	13 K x B	Q B3
3 B Q3	P x P	14 Kt B3(d)	P B3
4 B Q4	Kt Q B3	15 K Kt sq	B Q2
5 Kt x P	Kt B3	16 R B sq	P K K4
6 K Kt K2		17 B x Kt	Q x B
(a)	B B4	18 Q Q4	R K2
7 Castles	Kt K4	19 R K B sq	B K3
8 B K3	Kt(B3)K5	20 Q K3	B x B
9 B K B4	P Q3	21 R B5	Q K3
10 P K R3	P K R4	22 Kt Q4	Resigns (e)
11 Kt R4(b)	Kt x P(c)		

NOTES.

(a) Nemo is evidently a book-player, but his knowledge leads him here astray. His move although correct in some variations of this opening, is here out of place and subjects him to a strong attack as will be seen.

(b) Refusing the proffered piece for fear of opening up the Rook's file, thus:—11—P takes Kt, P takes P, 12—B to Kt 3, Q to B 3 followed by Q to R 3.

(c) Q to B 3 perhaps a better move.

(d) Quite sound. For if now P to K Kt 4, 15—Kt to Q 5 (!)

(e) A pretty game broken off at an interesting stage. Nemo suggests the following ingenious continuation that might have occurred had the game been carried on a little longer:—

22—.....	22—Q to R 3
23—P takes B	23—P to B 3
24—R to K 5	24—K moves
25—Kt to B 5	

and White remains with a piece to the good and a formidable attack.

A RUY LOPEZ STUDY.

COMMENTS AND NOTES FROM THE "WESTMINSTER GAZETTE."

The following game played at the Graz Chess Club, is an instructive specimen of the weakness of the King's Fianchetto Defense in the Ruy Lopez. Without any palpable oversight, Black gradually drifts into a losing position through Professor Berger's steady position-play:—

RUY LOPEZ.

White.—J. Berger.		Black.—A. V. Paniz.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	15 B Kt3 ch	B K3
2 Kt KB3	Kt QB3	16 B x B ch	R x B
3 B K5	P Q R3	17 B x B	K x B
4 B R4	P Kt3	18 P B4	Kt B2
5 P Q4	P x P	19 P B5	R K4
6 Kt x P	B Kt2	20 P x P	P x P
7 B K3	Kt K2	21 Kt Q5	P K B4
8 Kt QB3	Castles	22 P x P	R x P
9 Castles	P Q3	23 R x R	P x R
10 Kt x Kt	Kt x Kt	24 Kt K7	Q Q2
11 Q Q2	R K sq	25 Q B4	R R sq
12 Q R K sq	B Q2	26 R x P ch	K B sq
13 B Kt5	P B3	27 R K B sq	Resigns
14 B R6	Kt K4		

4....., P to K Kt 3 is an unsatisfactory defense, of which, however, cautious Prof. Berger did not make the most in the opening by playing 6—Kt takes Kt instead of the more forcible 6—B to Kt 5, as Black gained a move with 6—B to Kt 2, and so got fairly out of it with a less cramped position, and if he had played 11—P to K B 4 he would have had quite an even game. The game afterward takes its regular course, White improving a more favourable position step by step. There is only one point to notice, viz., that Black could not gain a Pawn with 12....., B takes Kt because of 13—Q takes B, R takes P; 14—B to R 6 with advantage, nor could the Pawn be gained with 13....., B takes Kt. 14—Kt to K 4 allows White to advantageously advance the KBP, after which Black's game can no more be saved; although he might have made a somewhat better defense, if he had not bared his King entirely with 21....., P to K B 4.

PASSENGERS.

ARRIVED.

Per Japanese steamer **Kobe Maru**, from Shanghai via ports: —Mr. W. R. Townsend, Mr. P. M. Clarkson, Mr. H. G. Greathex, Mr. R. D. Kidd, Mr. Kent Greathex, Mr. T. Yamanaka, and Surgeon Yamashita, in cabin; Mr. E. B. Hanson, Mr. K. Wm. Little, Mr. J. Kawa, Mr. T. Kusakari, Mr. T. Nagata, and Mr. J. Kazimoto, in second class, and 54 in steerage.

Per British steamer **Coptic**, from San Francisco via Honolulu: —Mr. and Mrs. H. L. Byrne, Miss Daisy B. Byrne, Master John M. Byrne, Mr. J. C. Hanna, Mr. and Mrs. W. S. Stone, 2 children and nurse, Mr. and Mrs. W. S. Squire, Capt. G. W. Coffin, Mrs. Frank Anderson, and 2 daughters, Mr. Johannes Muller, Mr. S. Fujita, Mr. J. S. Day, Dr. and Mrs. W. O. Johnson, Mr. Julius Bryner, Mr. W. G. Hockridge, Mr. Camillo Torrella, Mr. and Mrs. Oscar J. Kron, Mr. Max Vopelius, Mr. and Mrs. G. W. Anderson, and Mr. and Mrs. D. M. Baringer, in cabin. For Nagasaki: —Miss Mary E. Malton, in cabin. For Shanghai: —Miss Elsie M. Garrettson, Dr. N. Isabella French, Miss Anna Erickson, Miss Lona Van Valkburgh, Miss Ellen M. Lyon, Miss M. Baaver, Miss Anna K. Goddard, Miss Kate C. Woodhull, and Miss Anna C. Woodhull, in cabin. For Hongkong: —Mr. and Mrs. Lam Ching Wah, Miss Harriet Lewis, Miss Amber Crocker, Mr. A. B. Ross, and Mrs. Finch, in cabin.

Per British steamer **Myrmidon**, from Liverpool via ports: —Mr. and Mrs. Playfair and daughter from Shanghai.

DEPARTED.

Per British steamer **Canton**, for London via ports: —Mr. James Clapperton, Mr. Robert Ferguson, Mr. George Laug, and Mr. Edward Huxery, in cabin.

Per British steamer **Coptic**, for Hongkong via ports: —Mrs. N. J. Blackwood, Miss Ethel Azbell, Mr. R. F. Eastlake, Mr. W. R. Eastlake, Dr. N. J. Blackwood, U.S.N., Mrs. Jas. Farey, Mr. E. J. Shaw, Mr. John Goodnow, Mr. T. D. McKay, Mr. and Mrs. G. B. Dodwell, Mr. F. Henderson, Mr. J. Guggenheim, Mr. Thos. Davenport, Mr. Lam Pak Tsun, Mr. A. Nicolle, Mr. C. F. Heinlein, Captain P. H. Prosser, Mr. Chin Low Chin, Mr. F. Kiene, Mr. Wm. Howarth, Mr. A. N. McConnell, Mr. M. Pors, Mr. H. L. Dorn, Mr. R. P. Flynn, Mr. R. Hotchand, and Captain Wilson Walker, in cabin.

Per Hawaiian steamer **China**, for San Francisco via Honolulu: —Mr. M. Baggallay, Mr. W. A. Behrens, Miss Birdsall, Miss Marie Chambareau, Rev. Dr. S. H. Chester, Mr. Henry Cloete, C.M.G., Miss Cluness, Mr. and Mrs. Tracy C. Drake, Mr. Robert Denneth, Mrs. E. J. Dove, Mr. W. B. Dunning, U.S.N., Mrs. H. W. Elliott, Dr. and Mrs. W. R. Faries and 3 children, Mr. R. S. Freeman, Mr. A. E. McGlew, Mr. C. M. Gunwaldt, Miss M. L. Halstead, Mrs. Walter C. Hatley, Miss Marie Hatley, Mr. and Mrs. L. D. Hillis and child, Mr. K. Ikeda, Rev. and Mrs. McIlwaine and 3 children, Mr. J. M. Jackson, Mr. W. B. Jones, Captain and Mrs. Linquist, Mr. T. A. Lloyd, Mr. Louis Longin, Mr. H. Cam. Lucas, Mr. C. Mackintosh, Mr. and Mrs. Oscar Mordhorst, Mr. and Mrs. C. F. Osborn, Mr. J. M. Powell, Mr. and Mrs. L. C. Putnam, Miss J. R. Ransome, Mr. Chas. W. Richards, Miss S. F. Richardson, Mr. D. H. Russell, Mr. and Mrs. R. P. Schwerin, Master F. Shea, Mr. K. Shieno, Mr. J. W. Silverston, Mr. J. E. Smith, Mr. J. E. Thompson, Master J. A. Thompson, Miss J. H. Thorndyke, Mr. John L. Tough, Mr. A. Walte, Mr. and Mrs. R. M. Willis, Mr. John S. Wright, and Miss Young.

LATEST COMMERCIAL.

IMPORTS.

No life has yet displayed itself in the piece goods market, either in shirrings, fancies or woollens, but a little business has been done in yards of the finer kinds. Quotations are nominally the same.

COTTON PICKER GOODS.

	PER YARD.
Grey Shirtings—8 1/2 yds, 35 inches	\$2.50 to 2.80

Pig Iron, 44 lb.	2.05 to 2.20
Hoop Iron (1 to 1 1/2 inch)	5.00 to 5.25

KEROSENE.

For this time of the year the market is very quiet. Offers have been made by dealers at rates below current quotations but holders remain firm and only a small business has been transacted.

	PER GALLON.
American	\$2.05 to 2.10
Russian	2.00 to 2.10
Langkat	— 1.90

SUGAR.

A small, steady business has been done in Brown at slightly increased prices. Stocks are low and the market is firm. In White refined there has been a small demand at former rates.

	PER PICUL.
Brown Takan	4.50 to 4.55
Brown Manila	4.50 to 5.35
Brown Daitong	3.90 to 4.00
Brown Canton	4.00 to 4.50
White Java and Penang	6.50 to 7.00
White Refined	7.30 to 8.00

EXPORTS.

RAW SILK.

Towards the end of last week and at the beginning of the current week quite a boom took place in the Raw Silk market, about 6,000 piculs being placed at gradually hardening prices. At the close the market is quieter, stock having been reduced to about 6,500 piculs. Shipments include 587 bales per *Verona* for Europe, 799 bales per *Coptic*, and 802 bales per *China*, for America.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den.	Nominal
Filatures—Extra 13/15, 14/16 den.	890 to 910

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BARNES, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Makomo to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a test- spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietors, at 51, Main Street, Settlement, by ARTHUR BELLAMY BARNES, of "Nooklands," No. 156, Bluff, Yokohama.—SATURDAY, DECEMBER 11, 1897.

*NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 18TH, 1897.

BIRTH.

On the 13th inst., at No. 168-A, Settlement, the wife of R. RUSOGG, of a son.

DEATH.

On the 16th inst., at the General Hospital, of typhoid fever, HENRY SWINBURNE ADAMS, in his 30th year.

SUMMARY OF NEWS.

THE Norwegian steamer *Tancred* is a total wreck on the Yayeyama group.

WILLSON'S Circus performed for the last time in the tent at Yoshiwara on the evening of the 15th.

APPLICATIONS for charters for two proposed electric railways in Yokohama were rejected by the Authorities.

A GRAND social meeting of journalists in opposition to the Cabinet was held at the Maple Club, Shiba, on the 14th inst.

THE graduation exercises of the Military College for Staff Officers took place on the 13th instant, when diplomas were granted to fifteen officers.

HIS EXCELLENCY SIR ERNST SATOW, K.C.M.G.,

British Minister to Japan, proceeded to the Palace on the morning of the 10th instant and was received in audience by the Emperor.

THE Budget for the coming fiscal year, which was printed some days ago, will be distributed to the members of the Houses about the 8th of January next.

RUSSIA has offered to lend money to China to repay the indemnity due to Japan, in order to remove the Japanese garrison from Wei-hai-wei as soon as possible.

THE Kyoto Imperial University, opened in September last, will add Colleges of Law and Medicine next year, at an estimated cost of about yen 70,000.

VICE-ADMIRAL SIR EDWARD SEYMOUR, C.B., has been appointed to succeed Sir Alexander Buller as Commander-in-Chief of the British squadron on the China Station.

SEVERAL influential members of the House of Peers will present a question to the Diet with regard to the dismissal of Mr. Takano, ex-President of the Formosa High Court.

THE Russian Press, in dealing with the subject of the capture of Kiao-chow, gives vent to profound dissatisfaction at Germany's action, but the Russian Government remains impassive.

MR. ALFRED WOOLLEY has been installed Worshipful Master of the Yokohama Lodge for the ensuing year. At Kobe, Mr. P. M. Skinner has been re-installed Master of the Rising Sun Lodge.

BARON ROSEN, the Russian Minister to Japan, gave entertainments at the Legation on the 10th and 15th inst., to which most of the Ministers of State and officials of the Imperial Household were invited.

THE coming session of the Diet being very near, the Codes Investigation Committee are at work day and night finishing the compilation of the remaining portion of the Commercial and Civil Codes.

THE temporary epidemic inspection bureaux at Kanagawa, Chiba, Niigata, Shizuoka, Nagano, Shimane, Hiroshima, Yamaguchi, Ehime, Kumamoto and other districts are to be closed on the 20th inst.

A VERY successful Christmas Bazaar was held at the Public Hall on Wednesday afternoon and evening under the auspices of the German ladies of Yokohama, for the benefit of the German Mission.

THE COMMITTEE of the Tokyo Chamber of Commerce have decided to petition the Government to abolish the regulations passed last session for subsidising the direct export of silk by Japanese dealers.

THE formal opening of the eleventh session of the Diet will take place on the 24th instant. As in ordinary years His Majesty the Emperor will honour the occasion with his presence in the House of Peers and give an Imperial Rescript to the Diet.

A CONTRACT between the Niigata Prefectural Office and Messrs. Samuel Samuel & Co., of Yokohama, for the supply of Rangoon cleaned rice to Niigata district, was lately effected for the delivery of 35,000 bags in March next at yen 4.30 per bag.

THE British steamer *Lady Furness*, chartered by the Mitsui Bussan Kaisha, which left Japan for Singapore on the 8th of November last with 3,200 tons of coal from Moji and 1,300 tons from Kuchinotsu, has not been heard from up

to date and fears are entertained as to the safety of the ship. The cargo is insured by the Marine Insurance Company.

THE M.M. steamer *Saghalien* met with a severe injury to her intermediate engine, one of three, on her voyage up from Kobe, on Thursday last. The engine was practically wrecked, owing to the breaking of the connecting rod, and it is reported that the steamer will be sent back to Marseilles for repair.

THREE steamers of the Oriental Steamship Company, to the port on the San Francisco line, are now being built in England and will be completed about next May. They are to be called the *Nihon Maru*, *Hongkong Maru*, and *America Maru*, and are each of 6,000 tons gross register.

A GENERAL MEETING of the Liberals was held at the Party's Office in Tokyo on the 13th inst. After several fiery speeches directed against the Government, it was resolved that at the opening of the coming session of the Diet a bill declaring want of confidence in the present Cabinet should be laid before the House with a full explanation.

A VERNACULAR paper reports that though the telegraph line between Kiao-chow and Tientsin was seized by the German force at the time of the occupation of Kiao-chow, the line between Kiao-chow and Shanghai remained in the possession of China, so that not a single message from the German force at Kiao-chow was received at Shanghai.

WITH regard to the revised Treaty between France and Japan, Mr. Kurino, Japanese Minister to France, has forwarded a despatch to the Foreign Office stating that the draft of the Treaty will in all probability pass the Senate at no distant date, as the French Authorities are making all possible efforts to facilitate its passing.

IN H.B.M.'s Court for Japan, on the 11th instant, before Mr. Justice Wilkinson and a Jury, William Cuthbert, a seaman on board the British ship *Port Caledonia*, charged with the wilful murder of a shipmate named Jules Jernard, was found guilty, after a three days trial, of manslaughter, and sentenced to five years' penal servitude.

THE Import market continues stagnant, with no immediate prospects of improvement, as money is hard to get and a general feeling seems to exist that financial matters will become still worse before they mend. Some small transactions in woollens and fancy cottons, for the New Year holidays, have been effected, but yarns and piece goods are unsaleable even at considerably reduced quotations. The same remarks apply to metals, in which nothing whatever is doing. There have been the usual purchases of kerosene, for immediate demands, but no considerable business, and the same may be said of sugar. Although there has been a drop in quotations for raw cotton, both Indian and American, spinners are not in a position to take advantage of it, most of the companies being in difficulties, and a movement is on foot to petition the Government for a subsidy to tide over the exigencies of the season. In the Export market there has been a fair business in silk, both for Europe and America, at gradually increasing prices, as stocks remaining on hand only amount to half the quantity at the same date last year. The tea trade is almost finished for the season, and there is very little left on the market of anything like fair quality. Exchange closes firm.

SPIRIT OF THE VERNACULAR PRESS.

The financial situation is very generally discussed by the Tokyo journals. Opinions differ greatly as to the causes of the present embarrassment, but, of course, there is a pretty general consensus that the Government is to blame. No nation has ever found itself economically distressed without attributing the fault to its rulers. The *Fiji Shimpō* appears to think that the Bank of Japan is largely responsible. Some months ago, as our readers doubtless remember, the Bank decided to lend money to individuals and not merely to other banks. It was unquestionably impelled to adopt that course because the Directors saw that the demand for capital to start or consummate sound enterprises could not be met by the sources of supply hitherto accessible. A plain confirmation of the soundness of that view has been furnished by the fact that wide advantage was taken of the facilities thus afforded, and that the Bank was ultimately compelled to issue notes far in excess of its legal limit—some thirty million yen is the present measure of the excess. Theoretically speaking, such a step was natural and proper, but the *Fiji* thinks that the notes thus issued have not served to meet the call for capital, but have merely gone to satisfy the need for additional media of exchange that has resulted from enhanced prices. Our contemporary advocates increased taxation as a means of checking the extravagant tendencies of the people, and, at the same time, urges the Bank of Japan to review its policy.

The *Nichi Nichi Shimbun* thinks that the Occident has plainly begun to extend hands of aggression towards the Far East, but, at the same time, rejects as chimerical the notion that China is about to be partitioned. What Powers are to undertake the division and how is it to be effected, our contemporary asks. The fact is that the organs of the Cabinet exaggerate the situation in order to divert the mind of the people from inconvenient topics. The *Nichi Nichi* sees no reason why Japan should take any action because Germany has occupied Kiaochow. It suggests that what has to be done is to acquire a more intimate knowledge of everything relating to China, her topography, her resources, her economy, and her general condition. Such knowledge is required not for purposes of future aggression, but in order that Japan may work with her neighbour (*tomo ni undo suru*). The article has a singularly apathetic tone. It gives no echo of the excited writing that the Kiaochow incident has evoked from other journals.

The *Nippon* essays to prove that the present Cabinet is quite unsuited to discharge the responsibilities of the time. The line of argument is somewhat tortuous, but its gist is that the strength of the nation must be united at this crisis, and that it never can be united so long as the Matsukata Ministry is in office. The practical uselessness of the army and navy in the hands of such incompetent statesmen is the *Nippon's* principal theme. Looking at European nations, it concludes that the purpose of their huge armaments is offensive defense. They prepare themselves to be ready to attack instead of waiting to be attacked. England builds a navy strong enough to fight the navies of France and Russia together. France and Russia, in turn, measure their own requirements by England's standard. Germany increases her sea force that she may compete with England in distant fields of commerce. France gets together a huge army because Germany is on her frontier. Germany acts similarly for the sake of France, and Russia organizes great hosts in order to overawe Germany and push her own boundaries southward. If Japan had decided to pursue a purely defensive policy, an army of a hundred thousand men and a fleet of a hundred thousand tons would have sufficed. But she raised her land forces to half a million men and her squadrons to a quarter of a million tons, because she wanted to be able to send three hundred thousand soldiers to the Asiatic continent, if her safety

demanded such a course, and to obtain maritime supremacy in Far Eastern seas. She might just as well have saved herself the expense and effort entailed by these expansions for she behaves as though she possessed no such means of asserting herself. In Korea, she has simply stripped herself of the influence that she once possessed there. It has not been taken from her. She gave it up herself: a piece to-day, a piece to-morrow, until there is nothing left. The policy of all Western Powers now-a-days is to work in union. No one of them takes a step in advance without consulting and, if possible, obtaining the coöperation of another, or, perhaps, two or three others. To be able to cement a union of that kind in seasons of emergency, preparations must be made for it in ordinary times. A man may have a hundred acquaintances visiting his house and enjoying his hospitality, but among them all there are not more than two or three to whom he thinks of turning in his hours of trouble, and those two or three have been near his heart at all seasons. No precautions of that kind are taken by those to whom the direction of Japan's affairs is entrusted. They go through the form of sending representatives abroad, but their representatives can not even contrive that Japan shall not be abused, misrepresented and held up to Western peoples as a nation to be tabooed and dreaded. No steps are taken to cultivate friendships that may be relied on in seasons of stress. In short, the *Nippon* concludes that the country's best interests are neglected and its strength wasted all because the Matsukata Cabinet is in office.

The *Mainichi Shimbun* reads a lecture to members of the Government and to politicians generally. It appears to think that morality is at a discount in these times of struggle and stress. Ever since the first meeting of the Diet, seven years ago, the contest between the political parties and the Cabinet has continued without cessation. In the early days of parliamentary institutions the political parties were swayed by an honest desire for reform. Any whisper of corruption provoked, at that time, strong indignation, and if a man was found to have sold his vote or changed his opinions for the sake of material gain, he became an object of public execration. But the public conscience has apparently lost much of its tenderness since then. The purchase of members of the Diet is now spoken of openly as though it were a contingency to be regularly reckoned with, and bargains are struck between Cabinets and political parties, the Ministers of the Crown agreeing to mould their policy so as to obtain the support of a majority, and the parties agreeing to sell their support for the sake of office and reward. If we turn to England, where the models of constitutional Government are to be sought, we see that statesmen's changes of opinion are the result of conviction not of expediency, and that as Peel fell from power because he repealed the Corn Laws which he had been chosen to support, and Gladstone was thrown over by his Oxford constituents because of the gradual development of his liberal tendencies, so, down to the rank and file of politicians, integrity and steadfastness of view are valued as the first essentials of a public man's career. But in Japan we have a general tendency to trim and compromise, an unhappy readiness to strike bargains and conclude compromises. Moral virility appears to be the great need of the time.

A well-reasoned article appears in the *Kokumin Shimbun* complaining of the confused and nebulous condition of party platforms. There are three parties in the field, the Progressionists, the Liberals and the National Unionists. The Progressionists recently severed their relations with the Cabinet and definitely adopted an attitude of opposition. A large section of the Liberals have also declared themselves hostile to the Ministry. So have the National Unionists. Naturally it is to be supposed that these three bodies would join forces, declare clearly the grounds of their hostility to the Government, and attack it in concert. Nothing of the kind is apparent. The Liberals are understood to have prepared an Address to the Throne im-

peaching the Cabinet. They intend to introduce the Address at an early stage of the Diet's session. But the Progressionists can not support such an Address. They can not possibly impeach the Cabinet for acts committed while they themselves were coöperating with it. They must, therefore, vote against the Address, or else the latter must be framed so as to refer only to official procedure subsequent to the Progressionists' rupture with the Ministry, an obviously paltry alternative. On the other hand, the Progressionists seem to have only one substantial ground of dissatisfaction with the Cabinet, namely, its taxation measures. Whether they really think that the finances of the country can be managed without recourse to additional taxation is very doubtful. The strong probability is that their opposition to increased taxes is dictated by a desire to conciliate the constituencies. Be that as it may, the Liberals can not conscientiously vote against increased taxes since that measure is necessitated by the Cabinet's adherence to the post-bellum programme mapped out by the Ito Ministry and approved by the Liberals themselves in the ninth session of the Diet. In truth, if the Liberals vote against increased taxation they will be preparing for themselves a very embarrassing situation when that very measure has to be adopted hereafter by a Cabinet with which they are allied. As for the National Unionists, their action in the ninth session of the Diet is fresh in the mind of the public. In order to recover something of the reputation they had forfeited, they introduced a sham Address to the Throne which they well knew there was no chance of passing. What course they really intend to pursue now, nobody knows. Thus the three parties have apparently taken the field for campaign against the Government, but neither can the legends on their banners be deciphered by the public, nor can any semblance of unanimity be found in their mottoes. They are not parties for country but parties for party.

The *Osaka Asahi* writes under the title "Friendship between Japan and China." It says that had it openly advocated such a policy three years ago, the office of the paper would probably have been wrecked. But calmer counsels prevail now. Men see things in a truer light. It is gradually coming to be understood that China, Japan and Korea must unite to repel Western aggression. That two persons should clasp hands of friendship after a fight, is the common custom of the world. It ought to hold equally in the case of countries. Japan's sole reason for going to war with China was the latter's arbitrary interference in Korean affairs. That cause of friction finally removed, there is nothing to keep the two nations apart. China's long hesitation over the commercial convention provided for in the Shimonoseki Treaty, afforded an indication of her reluctance to place her relations with Japan once more on a friendly footing. But she came round at last, and not only concluded the convention, but also conferred honours on its Japanese negotiators. The experiences gained by her in the war must have shaken her somewhat in her conservative groove, and subsequent events cannot have failed to push her still farther in the direction of progress. The Liaotung affair has been a bitter lesson. Three European Powers combined ostensibly to preserve the continental integrity of her empire, and they have been engaged ever since exacting substantial rewards for the services rendered by them on that occasion. The Chinese statesmen must have been wishing heartily that they had never accepted aid from Russia, when suddenly Germany, who had figured as the leader of the "conservation league" in 1895, made the murder of two missionaries a pretext for seizing Chinese territory. Let the Chinese be never so devoid of political insight, they must now see clearly that the Three Powers interfered in 1895 not to preserve Chinese territory for China but to preserve it for seizure by themselves at the convenient moment. An immense responsibility devolves upon Japan: the responsibility

of deciding what shall be the future of the Far East. Shall China and Korea be left to fall a prey to Western aggression, or shall they be conserved for the Chinese and the Koreans? That is the problem which Japan has to consider and to solve, for its solution must depend to a great extent upon the course that she decides to adopt.

MR. BROCKELBANK'S PICTURES.

A PRIVATE VIEW.

A cursory glance round the room in Keil's Building in which Mr. G. Brockelbank displayed his pictures—the work of 1897—was sufficient to show that he loves the sea. That is, he delights in catching the varying moods of the great world of heaving waters and having secured them, with clever, facile brush conveys to the idlest looker-on some idea of its mystery, its witchery, its terrors, or its pleasures. He is happiest, perhaps, when he finds the sea in its calmer moods, when the sky above looks down and smiles at its reflection in the green-blue bosom of the vasty deep. Yet many of his stormy pieces are very attractive and arrest attention for the skill the painter shows in his handling of the sterner tones. Mr. Brockelbank, in our humble judgment, is a splendid colourist, and one who has thoroughly grasped the deeper principles underlying the painter's craft: the result is an exhibition of a very uncommon order. Nearly 50 pictures are ranged about the spacious room, and every one possesses an individuality of its own. It speaks well for the versatility of an artist when this can be truthfully said of a roomful of one season's work. Of course we do not wish to allege that every subject has been equally well treated; that would be bathos. Some have evidently been the result of labourious days when the brush dragged heavily, as it were; others have been struck off when the creative faculty was at full tide, and these consequently are instinct with a higher art than that imprinted upon some of their fellows. 'No. 1, is a familiar view at Chituzenji, showing an old fellow engaged in net fishing. It is a happy idea, skillfully carried out. The next picture (No. 2, His Evening Work), though fuller in contrasting detail and requiring more careful handling, is scarcely likely to prove so taking. Yet the modelling of the ancient net-maker's figure is excellent and the idea altogether very poetical. A pleasing study is No. 3, entitled Canal, Honmura, Sunset. It is our old familiar Creekside, with the rising ground of the Bluff, but all transmogrified by an artist's fancy, ugly Van Schaick Hall being lost in a delicate mist of twilight blueiness. The neutral tints of a very pale sunset show to advantage in No. 9, Junks, sunset, though the picture loses half of its individuality by contrast with its neighbour, No. 7, Up Channel. This is an animated piece of brush work redolent of a wet sheet, a flowing sail, and a wind that follows fast. Even better in conception and workmanship is No. 8, Barges, Yokohama, showing the entrance to the Bentsen creek filled with the cumbrous but picturesque sea-going junks of Dai Nippon with their peculiar lines and quaint stern-post furniture. A spirited sea-piece, No. 11, entitled Squally, is a little gem; and even prettier is, 16, Sunshine and Shower. Mr. Brockelbank has been wonderfully successful in his treatment of the opalescent lights that render the atmosphere of Japan so baffling for the painter who wishes to transfer it to canvass. His distances are delightfully suggested and instinct with the charm that still hangs in the natural haze of Japan—the haze that knows nothing of the smog of English air. And so through sunlight and shadow Mr. Brockelbank takes his gazers from the creeks and lanes of Yokohama to the pretty places in, near, and around Nikko; then back to the seashore of Tokyo Bay, or else far out to sea; carrying away their thoughts from the weary grind of a treaty-port's work-a-day monotony to places where one's feet delight to wander when the rare—and growing rarer—holiday hours come round. But the exhibition is not

solely confined to Japan. Here and there are pictures that take us back to dear old England; 21, Gravesend Beach; 30, Barges off Erith; 31, A foggy morning; 36, Thames Barges; 37, Scarboro Head; 34, Sunset, Salcombe, Devon; 39, Storm Brewing, Yorkshire Coast—these all tell the tale of Erasmus that exiles the world over repeat to themselves in their hours of weariness—"it is a very fair land this land of England; very beautiful and good to live in."

Strolling round the small picture-gallery with Mr. Brockelbank as *cicerone*, was very pleasant, especially to hear him tell of his work and the conditions under which some pictures came to be painted. No 38, Hongkong, is the finished study of a sketch made by him from the deck of the P. & O. *Verona*, the day after Christmas two years ago. It is a pretty little thing and a faithful rendering of that crowded harbour-colony that nestles so snugly beneath the frowning mass of Victoria Peak. The last four pictures of the collection are black and white crayon sketches of no mean merit. No. 40, A Stormy Sunset, tells the tale of a brig running for shelter along the rocky Yorkshire coast. But alas, the storm breaks before it reaches its haven under the hill. The tale is finished by No. 41, "The Morning After"—a dismal wreck lay ashore. The spirited manner in which the story is told appeals strongly to the imagination.

THE HAKODATE CASE.

A correspondent writes to the *London and China Express* as follows:—

"A highly interesting case of international law has arisen in Hakodate. A number of Chinese employed on board a British man-of-war, for the time stationed at Hakodate, were caught in *flagrant*, gambling on shore, and brought up for trial before the Japanese Magistrate. The British Chargé d'Affaires at Tokyo, Mr. Gerard Lowther, protested against this action, and demanded the surrender of the Chinese gamblers, asserting, it is reported, that as they formed part of the crew of a British man-of-war, they were both by international law and by treaty only amenable to British jurisdiction. The Japanese Government declined to accept this view, and it seems that the Japanese judicial proceedings took their course. The question stands thus—Chinese subjects in general are, by the new Japan-Chinese treaty, clearly amenable to Japanese jurisdiction for actions committed on Japan soil, whilst, on the other hand, by the consent of nations, a foreign man-of-war is considered as extra-territorial. Therefore there could not be any doubt that the Japanese Courts would have been incompetent to have exercised jurisdiction over Chinese members of the crew of a British war vessel for any offences committed on board the ship, being by a fiction of international law supposed to be not within the dominions. As the offence, however, was committed on shore—i.e., on Japanese territory—there can be no doubt, again, that the Japanese authorities were right in assuming jurisdiction, provided always that the Chinese in question were not British subjects, for instance, registered in Hongkong. In this case the clause of the British Treaty would undoubtedly apply also to Chinese who are British subjects, and they would be exempted from Japanese law. It is generally recognised that the officers and men of a foreign ship of war are not extra-territorial persons by themselves when apart from their vessel, like, for instance, Ambassadors, who are even outside the Embassy, though by the comity of nations the ship of war itself being a public vessel of the foreign state, is considered as extra-territorial.

A somewhat similar case happened many years ago in the British Legation at Yokohama, when Sir Harry Parkes was British Minister. His Chinese boy had forged and uttered Japanese Government bank-notes, and had been caught also in *flagrant* inside the Legation, by Sir Harry Parkes himself. In this case Sir Harry Parkes decided, however, that the culprit should be handed over to the Japanese author-

ities, who eventually punished him in conformity with the criminal code then in force. It is not unlikely that the archives of the British Legation may contain some records of this case, which with some reason might be quoted by the Japanese authorities as a precedent in the in the present controversy, for it would scarcely be reasonable to claim for the crew of a foreign man-of-war greater privileges and immunities than were admitted in the case of the inmates of a foreign Legation. Sir Harry Parkes would have been the last man to give up a right, particularly after his well-known intrepidity shown in the *Arrow* case in Canton. He evidently thought that the privileges of a Legation were not framed for the purpose of shielding a Chinese criminal, and he therefore voluntarily surrendered him to the territorial jurisdiction which at that time was scarcely remarkable for its leniency or judicial competency."

This correspondent introduces a wholly new factor—registration as British subjects in Hongkong. Moreover, he appears to be quite satisfied that any Chinaman so registered is entitled to claim the rights of a British subject outside Hongkong. That, we need scarcely say, is a mistake. Her Majesty's Chinese subjects in Hongkong possess the status of British nationals within the limits of the colony only. They do not retain that status after they have left the colony. Thus a Hongkong Chinese passes under the jurisdiction of the Chinese Authorities so soon as he sets foot on Chinese soil. He is not judicable by a British Consular tribunal for offences committed by him in China. The question of Hongkong registration did not come up at all in the case of the Hakodate Chinese. As to the incident related of Sir Harry Parkes, its relevance is more than doubtful in the sense related by the correspondent. A British Consular Court would not have been competent to punish a forger of Japanese bank-notes for the obvious reason that British law does not concern itself with forgeries of foreign media of exchange. Chinese Consular Courts would have laboured under precisely the same disability, and, at any rate, they did not exist in Japan at the time. Hence the forger must have escaped scot-free had not the Japanese been invited to assume jurisdiction. But there can be no question that had his offence been cognizable by a British Consular Court, Sir Harry Parkes would not have surrendered him to the Japanese. In short the Minister's action was determined by the nature of the crime, which point did not figure in the discussion of the Hakodate case. Yet it so happens that a precisely similar element was connected with the Hakodate affair, though the correspondent of the *London and China Express* either fails to see it or fails to make it clear. The Chinese found gambling in Hakodate could not have been punished by the British Consul, for their act was not an offence under British law. Their surrender by the Japanese would therefore have involved immunity from all penalty, though they had broken a law which has to be strictly enforced in Japan in the interests of good order. Indeed, one of the local English journals of Yokohama based a complaint on that very fact, namely, that the immunity which the gamblers would have enjoyed under the British flag was violated by the action of the Japanese in assuming jurisdiction! Doubtless that was the only consideration that caused Her Majesty's Chargé d'Affaires to regret the duty which he deemed himself bound to discharge in demanding the surrender of the men.

THE IMPERIAL COURT.

A notification has been issued by the Imperial Household Department to the effect that as the third period of mourning for the late Empress Dowager will not have terminated by the close of the year, the usual visit of high-class officials, peers, holders of orders, &c., to the Palace on the 1st of January, will be dispensed with.

THE NEW TARIFF.

It is difficult to see how Count Matsukata's forecast about the new tariff's going into force next July can be verified by events. The Austro-Hungarian Treaty presents no special difficulty, for though it has still to pass the Reichsrath and the Reichstag before ratifications can be exchanged, provision has been made that the Tariff attached to it may become operative a month after the exchange. But the French Treaty has to come to Tokyo, and the ratifications have to be exchanged in that city, after which an interval of six months must elapse before putting the Tariff into force. Supposing that the Treaty has now been despatched from Paris, it may reach Japan by the end of January or the early part of February, and allowing a week for the exchange of ratifications, it appears that the six-months' period can scarcely begin to count before the middle of February. On that hypothesis—which seems to us as favorable as Japan can reasonably expect—the Tariff can not go into effect before the middle of August. We ourselves should be disposed to name the 1st of September, if we were invited to make a prediction. But whether the date be August or September, there is much reason to doubt whether the Treasury will receive any considerable addition to its income owing to the operation of the new Tariff during the fiscal year 1898-9—i.e., the fiscal year ending March 31st 1899. Unless the merchants engaged in Japan's import trade are very different from merchants in other countries, they will discount the effects of the Tariff, certainly for half a year, probably for a year, in advance. Some people are disposed, indeed, to attribute partly to that fact the marked excess of imports noticeable during the past eleven months. But that idea does not appear to be well founded. The foreign merchants in Japan are very wide-awake folks. They are not at all likely to do anything clumsily precipitate. Despite the wild assertions published from time to time by a local English journal in Yokohama, there is a perfectly clear idea in commercial circles as to the earliest date when the operation of the Tariff may be expected, and to pile goods into storehouses nearly a year in advance of that date, paying insurance, rent, and interest, and risking deterioration, all the while, would be a proceeding not at all after the fashion of the businessman of the Settlements. But during April, May and June next we may expect to see such a "balance of trade" against Japan that journalistic economists will be in despair. The adoption of the gold standard is eminently convenient for such far-sighted operations. So long as fluctuations of exchange exposed the import trade to an element of uncertainty representing from five to fifteen per cent. in a few months, the financing of a transaction might have involved considerations more important to a merchant than the question of avoiding a small increase of duty. But with an absolutely immutable exchange, precautions against Tariff charges can be taken without any of the old risks.

We are charged, we observe, with describing the rates imposed by the new Tariff as "a small increase." Need we say that we have done nothing of the kind? Referring to the influence of exchange fluctuations as compared with im-

port duties under the new Tariff, we wrote:—"So long as fluctuations of exchange exposed the import trade to an element of uncertainty representing from five to fifteen per cent. in a few months, the financing of a transaction might have involved considerations more important to a merchant than the question of avoiding a small increase of duty." Our point was simply one of comparison between exchange fluctuations and increased duties. The ingenuousness of separating the words "a small increase of duty" from the context in which they were used, and instancing them as a general description of the new Tariff rates, is, at all events, diverting, and might be overlooked with pity as a fresh instance of the vertigo which we have already commiserated, were we not averse to being represented, even by irresponsible writers, as making light of the heavy addition that the new Tariff will make to the burdens of the import trade.

RECIPROCITY IN THE MATTER OF LAND OWNERSHIP.

Referring recently to the sweeping charge which has several times been preferred against Japan by local foreign journalists—the charge that while the privilege of owning land is permitted to her people in all the countries with which she has treaties, she does not extend the same privilege to the subjects or citizens of those countries within her own borders—we said:—"The ownership of land by aliens is not permitted by all Occidental States, and if, in certain cases, Japan can be charged with lack of reciprocity, in others she is only doing as she is done by." The *Kobe Chronicle* challenges us to name any Occidental countries except Russia where such a restriction exists. We reply that, when making the statement, we had in mind the United States of America, Australia, and Russia. Our *Kobe* contemporary alleges that "in the United States landed property can be purchased as easily by an alien in his own name as by a son of the soil." That is not the case, however. There are, indeed, a few States of America where such liberty of tenure exists, but in some, and in the territories, it does not exist at all; in others it is permitted to an alien so soon as he has declared his intention of becoming naturalized, and in others it is permitted on a limited scale only. In Australia, also, restrictions are imposed. It can not be urged, therefore, that in the case of the United States, or of the two Australian Colonies which have come into the Treaty arrangement, or of Russia, Japan is lacking in reciprocity. We must again repeat here what we have already stated over and over again, that we do not for one moment endorse Japan's attitude in this matter of land ownership. We do indeed hold that the facilities for long leases granted by the new Civil Code will obviate any difficulty so far as concerns the mere tenure of land, but we have not the smallest sympathy with the exclusive spirit which imposes a veto on the ownership of land by aliens. It is unnecessary to recapitulate the arguments repeatedly put forward by us in the past on this subject. We allude to the matter here only because the *Kobe Chronicle* writes as though we defended Japan's general position, whereas we condemn it most thoroughly, as our contemporary must be well aware.

THE DIET AND THE CODES.

Public anxiety appears to be increasing with respect to the fate of the remaining portions of the Civil and Commercial Codes, the promulgation of which before July 19th of next year is essential to the operation of the Revised Treaties in 1899. We have already pointed out that even though the House of Representatives be dissolved before the Codes are passed, there should not be any insuperable difficulty in convening a new House in time to pass them before June. But that forecast is based on the assumption that the new House consents to abstain from the conduct which led to its predecessor's dissolution. Should the new House also persist in passing a vote of want of Confidence or an Address to the Throne at the beginning of its session, a second dissolution may possibly take place, and in that event the Government would have no recourse but to promulgate the Codes by Imperial Ordinance independently of the Diet—a step not to be lightly taken. Such are the fears expressed by Tokyo newspapers. But it need scarcely be anticipated, we imagine, that the Cabinet will resort to dissolution twice. What seems more probable is that if the new House of Representatives proves refractory, the Cabinet itself will dissolve.

THE LIBERALS AND THE ARMY.

The Liberal Party having voted for the programme of armaments expansion as mapped out by the Ito Cabinet, find themselves, apparently, somewhat perplexed now to escape the responsibility of their act. So, at least, we gather from the *Hochi Shimbun*, though it must be confessed that what the newspapers tell about the doings or intentions of political parties can seldom be implicitly trusted. The *Hochi* publishes a statement, avowedly made by a Liberal, to the effect that the Party's endorsement of the scheme for increasing the Army to twelve battalions was given under the belief that no additional taxes need be imposed to consummate the undertaking. They now see, however, that the estimate was erroneous and while admitting their own precipitancy in accepting it, they censure the Cabinet of the day for having deceived them. Whether that is a suggestion made by the *Hochi* to provide for wavering Liberals an excuse to attack the Government, or whether it is really an opinion of the Liberals themselves, we can not tell.

VLADIVOSTOCK.

Several months ago we noted that a powerful ice-crushing vessel had arrived at Vladivostock from Denmark, and that, judging from the performances of similar machines in the North Sea and the Baltic, there could be little doubt that the days of Vladivostock's winter isolation were at an end. The interesting fact seems, nevertheless, to have escaped journalistic attention at the time, but the *Nadeshuia* having now proved her ability to perform the task assigned to her, people have suddenly awoke to Vladivostock's new character. The ships of the Russian Volunteer Fleet are now advertised to carry on their service right through the winter months.

THE KIAO-CHOW AFFAIR.

The unfortunate missionaries, whose deaths have caused the present international complications in the Far East, seem to have been almost forgotten, so effectually has their fate been overshadowed by its consequences. Now only, more than a month after their murder, are we in possession of any details. Two accounts are published by the Shanghai local press. The first is from the Chinan-fu correspondent of the *N.-C. Daily News*. He writes under date of Nov. 13th:—

Word reached the city the day before yesterday of some disturbance in Yenchow-fu, four hundred li south-west of Chinan-fu, but your correspondent failed to elicit any reliable information about the affair until yesterday, when the Roman Catholic Bishop was so thoughtful as to send a man around to tell me that word had just been received of a robber raid in Yenchow-fu, county of Kuyie, in which the German Catholic Mission premises had been attacked at about eleven p.m. on November 1st and two German priests killed. Their foreign names I failed to get, but their Chinese names were Han and Neng. The robbers sacked the premises, carrying away everything except a few clothes, but did not set fire to the buildings. One priest managed to hide himself and escaped later to Chining-chou, less than a day's journey distant, from which place word was sent up to Chinan-fu. Why it should have taken ten days for the word to reach the *yamens* here I do not understand as there is telegraphic communication with Chining-chou, and even by courier it is only four days distant. As soon as the Governor received word of the occurrence he despatched the Provincial Judge to Yenchow-fu to manage the affair, with orders, according to one of the telegraph clerks who wrote me about the matter, to "kill the murderers freely." The region in which this sad occurrence took place is noted for its turbulence. Scarcely a year passes without there being serious trouble with bands of robbers. Some of your readers will remember the robber raid which took place in Chining-chou nearly two years ago, in which a band of desperadoes attacked the premises of the American Presbyterian Mission, shooting the Rev. Mr. Bent and destroying the safe in their search for silver. It is a very unhappy region for missionaries, especially those with wives and children.

This information, it will be observed, is based on facts furnished by the German Roman Catholic Bishop himself. It must therefore, be accepted as accurate, in the main at all events.

Another account is given by the *Shanghai Mercury*—an account naturally more sensational than that of the *N.-C. Daily News*:—

Gradually something approaching accurate information of the terrible murder of German priests at Yenchow-fu, Shantung is obtainable. It appears that a troublesome band of ruffians, the *Tatao Hui*, or "Great Sword Society," had been manifesting a threatening attitude for some time past and had on several occasions shown decided signs of hostility to the missionaries, but not such as to lead them to suppose that any unusual violence was meditated. However, the Superior in charge of the Mission felt it necessary to warn the missionaries, and it was found that his words had not been unheeded. No trouble had been experienced with the officials, and the people were generally well disposed. Somewhat over a year ago this "Great Sword Society" looted the Mission premises and assaulted the fathers in charge. The attack became a matter for Peking, and it was settled more or less satisfactorily, and without recourse to any naval demonstration. The robbers were most of them arrested and were severely punished, and the matter was believed to have been settled once and for all. Nevertheless, not very long afterwards, it became painfully evident that the gang was too powerful, too well-organised, to be overawed by such feeble measures as the officials were able to put into operation or to enforce. There were many subterranean meetings and premonitory signs which, though causing the fathers some temporary anxiety, failed to influence them sufficiently to cause the abandonment of their work, in which they were progressing with much encouragement.

Then came the murder of November 1, when the Mission premises were surrounded by a howling mob only too evidently bent on mischief. It was

late at night and the small community had retired long before and were only awakened by the excited natives bursting into the Mission. While the plundering was being carried out by one party another but less numerous band made for the fathers themselves. In the excitement one of them, an elderly man, managed to get away, but Fathers Henle and Nies were knocked down, and murdered as they lay on the ground.

When their bodies were discovered by their terrified native servants they were lying almost where they fell. There was very little clothing left. This had not been deliberately torn off so much as cut to pieces by the countless stabs which had been inflicted. When the blood-soaked remnants of clothing were removed it was found that there was scarcely space to lay a shilling on any part of the body without covering a wound. From head to foot both bodies had been stabbed through and through. This in itself seemed to show that not only was the murder fully premeditated, but that revenge, and not mere murder was the motive. Plunder was a secondary consideration, and it is not at all improbable that the rowdies and loafers of the place, as distinct from the *Tatao Hui*, shared in the looting. Rarely has mutilation been carried to such an extreme, indeed the next and the last would have been dismemberment; beyond that barbarism could scarcely go.

Bishop Garnier, S.J. of Shanghai, was at the time, as now, on a visitation to North Kangan, and it had been arranged that the murdered fathers should meet Dr. Garnier in a friendly manner, as they were working in South Shantung and the Bishop was travelling in North Kangan, the adjoining province. This was not to be.

That the officials are to blame less for their impotence is clear, as Bishop Garnier, approaching near to the Shantung frontier, states in a letter received here that he has been received by officials and people in a singularly kindly manner, and demonstrations of good feeling all along the route have been most effusive and apparently sincere. And the French priests and their native Christians experience no difficulty in the free exercise of their faith and intercourse with the people generally.

The German Foreign Mission is under the charge of Bishop Anzer, an opulent Bavarian, who has devoted the whole of his large private fortune to the establishment and maintenance of the Mission, of which he was one of the two founders. At present he is in Europe and by a singular coincidence he was—and may be now—in Berlin at the time of the murders in Shantung.

The murdered missionaries were comparatively young men. Father Henle had been seven years in China, and was 35 years of age. Father Nies had only come to China late in 1895, and was 26 years of age. They were both very zealous men, broad-minded, and tolerant in their views, and natives of Bavaria.

The outrage has caused profound sorrow among all missionaries working in the province, but long distances separate them and even up to now it is quite possible that many are working in their respective districts in ignorance of all that has taken place.

Even if we accept the latter and more sensational of the two versions, it becomes evident that the Yenchow-fu incident is an unhappily vivid illustration of the old difficulty that has so often disturbed the relations between China and the Occident. These German missionaries were living in a district notoriously exposed to bandit raids and well known to be exceedingly perilous for foreign residents or travellers. Why were they there? What necessity was there for them to endanger the peaceful relations of two empires by thrusting themselves into needless dangers? The Chinese authorities are apparently incompetent to protect the lives and property of their own nationals in Yenchow-fu. Surely it is unjust that they should be required to protect the lives and property of foreigners the purpose of whose presence greatly enhances the perils of the locality. Since China has signed treaties with Western Powers she must be required to implement her engagements. As to that, all are agreed. But is no manner of consideration due to her difficulties? Are the propagandists of

the gospel of Jesus justified in stretching their treaty privileges to a point far beyond the limits of proper prudence and charitable sympathy? Does there not devolve upon them any responsibility to aid in preserving peace upon earth and goodwill among men? Side by side with these accounts of a bandit outrage comes intelligence that, at the very time of its occurrence, the French priests on the Shantung frontier and Bishop Garnier himself were receiving most kindly treatment from Chinese local officials and people. How often within the past fifty years have English, French, and German travellers been seized by Grecian bandits and held up for ransom, if not cruelly murdered? It is certain that if the Mahomedan missionaries established a post among the mountains of Thessaly, and were attacked, robbed and massacred by bandits, Europe would not tolerate the notion of Turkey's seizing Marathon and formulating a series of demands upon the Government in Athens. That side of the question certainly deserves consideration, but receives none from the general public. It deserves consideration, not in the interests of justice alone, but also in the interests of Christianity, for if one thing be more calculated than another to make Christianity hateful in Chinese eyes, it is these displays of force in connexion with its propagandism. History will have scathing verdicts hereafter for all such doings. The other side of the question is easy to see and easy to state. We do not overlook any feature of it. But we say that if a maximum of vigilance is to be exacted from the Chinese some measure of circumspection should be required of the missionaries themselves.

The following item of intelligence is published by the Shanghai paper:—

A despatch received by the local mandarins from Chinanfu, capital of Shantung, reports that nine of the bandits concerned in the murder of the German priests have been captured, and a quantity of the plunder recovered.

The *N.-C. Daily News* publishes the following telegrams from a Chinese correspondent in Peking:—

Peking, 29th Nov.

The German Minister has formulated his demands on the Tsung-li Yamèn under six heads:—

"(1) The 200,000 indemnity for the two German missionaries killed at Yenchow. (2) The rebuilding of the chapel destroyed in the riot. (3) The payment of Germany's expenses incurred in the occupation of Kiaochow. (4) Li Ping-sheng, retiring Governor of Shantung, to be cashiered and dismissed from the public service. (5) The severest penalties upon the murderers of the German priests and upon the local authorities where the riot took place. (6) a. German to be given the sole right to open coal mines throughout Shantung province. b. Special privileges to be granted Germans in the matter of railways in the said province, and c. Germany to be given the privilege of storing coal at Kiaochow in perpetuity; i.e., Kiaochow to become a German naval coaling station.

The Imperial Government has, so far, refused to negotiate with Germany, and demands the withdrawal of the German forces before consenting to any of the above demands.

30th November.

In the Grand Council this morning his Imperial Majesty declared that he was willing to grant articles 1, 2, and 5 of the German demands, but as for Articles 3, 4, and 6, His Imperial Majesty is said to have announced that he would rather lose life and throne itself than give way to such preposterous demands. It is further stated at the Palace that the Imperial Government will ask the Dual Alliance and Great Britain to mediate and has decided not to proceed to extremities with Germany at present. Confirmation is given to the above report by the daily conferences the Ministers of the Tsung-li Yamèn have been having with the Ministers of France and Russia of late. There is also a rumour, the source of which cannot be traced, to the effect that the Russian Minister has

declared his inability to give any help to China in the present crisis.

We know, however, that the Peking Government has consented to negotiate on the basis of the German demands, but, of course, it does not follow that the above statement is accurate. We ourselves can not credit it. We can not believe that a great, self-respecting Power like Germany has preferred such a demand on such an occasion as the sixth in the above category.

"His Excellency Li Ping-heng," says the *N.-C. Daily News*, "is anti-foreign and conservative, but he has the reputation of being an honest man, and there will be many regrets among the opponents of corruption in China if he has to be sacrificed." The question that will at once occur to every one is whether Li deserves such punishment. Is there any evidence of contributory negligence on his part?

We re-produce the following from the *N.-C. Daily News* :—

A proclamation in Chinese issued by the German Admiral has been handed to us, a translation of which we give below :—

"Von Diederichs, Commander-in-chief of the Imperial German Eastern Fleet, hereby issues the following proclamation :—

"Be it known to all concerned that I have come in obedience to the commands of my sovereign, H.I.M. the German Emperor, who has instructed me to land at Kiao-chow Bay at the head of my forces, and seize the said Bay and all the islands and dependencies thereof. Having performed this duty it now behoves me to mark out the boundaries of the region held by me which are as follows :—

(1) From a straight line drawn from the seashore to the eastern hill to a spot distant, at high water mark, 18 li from Kiao-chow.

(2) From thence a straight line drawn northwards to the Likin station at Tapot'eng; thence back of this to the meeting of the waters of the Kiao-chow river and the Taku river.—Note: *Taku* means "Great Ancient"—Translator).

(3) From thence eastwards to the seashore as far as an imaginary line cutting Laoshan Bay in the middle.

Note—The colloquial term for Laoshan Bay is *Laowan* or *Lao Bay* which is also used in this proclamation.—Translator.

(4) The eastern line commences from a northerly point to the midway point of Laoshan Bay, thence southwards as far as the shores of the island of Kuanti Miao, Tsailien island, etc.

(5) The southern line is drawn from Tsailien island to the southern point of Tiloshan island.

(6) From the north it is drawn to the seashore on the western side where the two places meet.

"The above noted places and thence are comprised within are to be held by the German forces, until the case of the murder of our German missionaries in Shantung be settled.

"In consideration of the above, therefore, I find it necessary to exhort you all, *viz*: the inhabitants of Tsingtao island and dependencies thereof, to peaceably continue your several avocations, and avoid listening to the words of the disreputable and rowdy classes to create disturbances. As a matter of fact Germany and China have always been friendly and at peace, and formerly when China was at war with Japan, Germany used her utmost efforts to rescue China from her dilemma. This was to prove our friendship as a neighbouring Power. We are now here not as enemies of China, hence you need not hesitate and entertain suspicions about us. Moreover, it will be the duty of the German officers to protect the law-abiding inhabitants of this place in order to preserve the peace. But if there be any discontented characters who shall endeavour to create disturbances, they shall surely be dealt with according to Chinese laws to the extreme (*i.e.*, beheaded—Translator). Further, if any German subjects here be killed the murderers will be dealt with according to German military law (*i.e.*, shot—Translator). Hence I consider it my duty to earnestly exhort all to abstain from breaking the peace, and avoid resisting whatever the German authorities shall decide to do hereafter here. You should calculate the exigencies of the case, and you will see that you are too weak to resist. Not only will you find it to be of no ad-

vantage to you, but you will find that you will have invited destruction upon yourselves.

"Furthermore, be it known that where German troops shall be encamped, Chinese officials will still be permitted to go on with their usual duties. But if in the future these Chinese officials should receive orders from their superior which they should find beyond their powers, they communicate the circumstances to the German Governor, General Chu (?) or to Brigadier-General T'sai (?). As for the buying or selling of land hereafter, permission should first be obtained from the Governor to become legal. Let all obey. An important Proclamation."

14th day of November, 1897, (*Imperial German Reckoning*). 21st day, 11th moon, 23rd year of Kuang Hsu—(*Chinese Reckoning*).

The *N.-C. Daily News* of the 9th inst. says thus :—

To secure the evacuation of Kiao-chow Bay, China has agreed to Germany's demands as far as regards (1) the indemnity for the two German missionaries who were killed; (2) the erection of a memorial church at the scene of the murder; (3) the payment of the expenses incurred by Germany in the occupation of Kiao-chow; (4) the permanent dismissal from the public service of Li Ping-heng, retiring Governor of Shantung, and lately appointed Viceroy of Szechuan; (5) the severest punishment of those who murdered the priests and of the local authorities where the crime was committed. As regards the special privileges to be granted to Germany with reference to coal mines and railways in Shantung, the precedent is to be followed that is set in the fifth article of the supplementary convention between France and China, signed by M. G6rard at Peking on the 20th of June, 1895, by which it was provided that when China undertook the exploitation of mines in Yunnan, Kuangsi, and Kuangtung, she might apply to France for skilled assistance.

This solution of the difficulty is a happy one for China, and will remove the doubts of those who had made up their minds that the murder of the two German missionaries was a pretext for the seizure of Kiao-chow Bay, not a reason. In thinking this they were evidently doing an injustice to Germany; but the punishment followed so quickly on the crime, not even leaving time to see whether the Chinese Government would themselves punish the criminals and give what other reparation was demanded, that it could not but seem to the ordinary man that the punishment was decided on even before the crime occurred. It must not be overlooked that explanations of the descent on Kiao-chow Bay, which without explanations international law must characterise as an act of piracy, have been made at home and reported to us by Reuters. A telegram of the 2nd instant from London gave us the explanation that "forces had been landed at Kiao-chow to obtain reparation and to prevent the repetition of similar lamentable occurrences." We could not pay much attention to this, because it requires so much explanation itself; it is unusual to seize a material guarantee before negotiations for reparation have been opened with the offending party, and unless there is good reason to fear that these negotiations will be otherwise fruitless. It may be said that Germany knows by experience that negotiations with Peking are generally fruitless, but at any rate international law and custom demand that they should be undertaken before force is resorted to. The treaty between Germany and China made at Tientsin in 1861 is still in force, and its thirty-sixth article says :—"The Chinese authorities shall always accord the most complete protection to the persons and property of German subjects, and particularly when they may be subjected to any insult or violence. In every case of burning, pillage, or destruction the local authorities shall send in all haste an armed force to disperse the rioters, to arrest the guilty and deliver them to the full rigour of the law." etc. Now, there is no suggestion that H.E. Li Ping-heng, the Governor of Shantung, neglected his duty when news of the murder of the missionaries reached him. Our correspondent at Chinanfu, a perfectly independent witness, wrote us on the 13th ultimo, before any news of the descent on Kiao-chow had reached that city :—"As soon as the Governor received word of the occurrence he dispatched the Provincial Judge to Yenchofu to manage the affair, with orders, according to one of the telegraph clerks who wrote me about the matter, to 'kill the murderers freely.'" There was no patent reason then for this hurried seizure of a material guarantee. But we have since had another explanation in a telegram dated London, the 7th instant, in which the German Foreign Minister is reported to have said that the reason for the descent on Kiao-chow was to be found in Germany's "constant griev-

ances against China, with which country, nevertheless, Germany desired to preserve friendship, but Germany cannot allow China to think she can treat Germans differently from other Europeans." This is a very remarkable statement, because it seems to most of us that China has been for some years, and sometimes to her cost, remarkably amiable to Germany and Germans, and the cynic might say that in murdering two German missionaries the Chinese mob were clearly proving that they did not want to treat Germans differently from other Europeans.

We have no reason to doubt the truth of the above statement except the fact that news of it does not appear to have been officially telegraphed as yet to Japan, which certainly ought to have been done were the complication at an end. However, a telegram did reach Tokyo on the 14th instant, announcing that the ex-Governor of Shantung had been degraded, and as the Chinese Government would not have been likely to take that step pending a settlement of the trouble with Germany, we shall perhaps be justified in accepting our Shanghai contemporary's version.

Meanwhile it is very diverting to observe the *North-China Daily News*' attempt to shuffle out of its own responsibilities. "This solution of the difficulty," it says, "will remove the doubts of those who had made up their minds that the murder of the two German missionaries was a pretext for the seizure of Kiao-chow Bay, not a reason. In thinking this they were evidently doing an injustice to Germany." That is really quite delightful. The idea of getting outside one-self, so to speak, and gravely censuring one's own misdoings in language phrased as though it were addressed to some one over the way, is the prettiest kind of journalistic dodging we have ever noticed. The *N.-C. Daily News* wrote, on December 2nd :—"One thing appears to be certain, that Germany intends to hold Kiao-chow Bay permanently, and that she is providing that if the partition of China is to come, she will have the province of Shantung for her share, or a part of her share." The same *N.-C. Daily News* writes on December 9th :—"Those who had made up their minds that Kiao-chow Bay was to be held permanently were evidently doing an injustice to Germany." As a matter of fact, the only journal in the Far East that refused to believe in the possibility of Germany's having any permanent designs upon Kiao-chow was the *Japan Mail*.

Still more amusing is the Shanghai journal's desperate struggle to cling to its faith in that offspring of its own credulity, the Cassini Convention. "There were some," it says, "who saw the hand of Russia in this seizure of Kiao-chow Bay, as they see it everywhere in Far Eastern politics. But there is good reason to believe that the intended coup was as great a surprise to Russia as to any other Power, and that when announcing it at St. Petersburg, Germany made skilful use of Russia's official denials of the existence of the Cassini Convention." Russia's "great surprise" is excellent silliness, and so also is "Germany's skilful use of Russia's official denials of the Cassini Convention." Our contemporary outdoes itself, however, in the following paragraph :—

As an instance of the very shallow views that some journalists take we may note the glee with which the *Japan Mail* jumps on us in its remarks on the seizure of Kiao-chow Bay by Germany. This seizure, it says, is a proof of the non-existence of the Cassini Convention, which it has always dis-

credited. It is really just the opposite. Russia considers that Kiao-chow Bay is her property, and that if anyone is to feel aggrieved at the German action, it is she and not China. We learn that when the news of the seizure was made public at Peking, the action of the Russian *Chargé d'Affaires* was as characteristic as it was dramatic. He posted off to the Tsung-li Yamén with an assumed air of indignant astonishment. "Here's a nice state of things," he said to the stupefied Princes and Ministers; "you gave us Kiao-chow Bay, and now you've given it to Germany!" "Given it! Why, it's been stolen from us, and we were just going to ask you to help us get it back!" "What! Help you, after such treachery as that! It was sheer treachery to us; you never fired a single shot! If you had fired one shot against the Germans, I might believe that you didn't give it. If the Germans had attacked you on the sea, I could understand your giving in, as I know you have no fleet now; but to let them attack you on land, and not fire a single shot in your own defence, of course it was treachery, and you will get no help from us." And thus Russia is able to oblige Germany, and at the same time get jauntily out of her undertaking to come to China's assistance when she is in difficulties. It is obvious that with Korea in possession and Port Arthur in prospect, Russia has now no farther need of Kiao-chow Bay.

That story indicates a bland and beautiful knowledge of the ways of inter-state diplomacy. The Russian Representative pretending to believe that China had voluntarily surrendered Kiao-chow to Germany, and alleging her act of treachery as a pretext for not carrying out the Russian part of the Cassini Convention, namely coming to China's assistance in the latter's hour of difficulty, is not that quite a unique page of diplomatic doings? It should be noted, too, that the editor of the Shanghai paper penned the above paragraph when he believed in the permanent occupation of Kiao-chow by Germany. In short, he believed that Kiao-chow had been ceded by China to Russia; that Germany nevertheless seized it permanently; that Russia offered not the slightest protest to Germany but confined herself to simulating indignation against China for a breach of faith of which he could not possibly have pretended to think her guilty; and, finally, that Russia finds no further need of Kiao-chow since she has Port Arthur in prospect, though she had Port Arthur equally in prospect under the Cassini Convention when she obtained Kiao-chow under the same Convention. 'Tis all a magnificent muddle.

TINGHAI AND KIAO-CHOW.

Reading of the unopposed occupation of Kiao-chow by a little band of German marines and contrasting it with the story of the seizure of Chusan in 1840, one is disposed to ask whether the Chinese of to-day are the same men that showed such a very different spirit fifty-seven years ago. The German Admiral had only three ships and could land only 600 men when he proceeded to capture Kiao-chow. Yet he experienced not the slightest resistance and was not obliged to fire one shotted gun. Sir Gordon Bremer, when he summoned Tinghai to surrender, had fifteen ships-of-war, four steamers, and twenty-five transports with 4,000 troops on board. Yet the Chusan officials utterly declined to yield. They declared that their duty to their Sovereign and their sentiment as soldiers forbade them to surrender any part of Chinese territory. It was necessary to bombard Tinghai, and not until the greater part of it was levelled with the ground could possession be obtained. The Chinese have certainly changed with the times.

TOKYO DRAMATIC AND MUSICAL SOCIETY.

The long period of mourning for the late Empress Dowager will terminate on the 10th January, and we learn that the Committee of the Tokyo Dramatic and Musical Society are exerting themselves to put an end, at the same time, to the inactivity that the Society's relations with the Imperial Court have compelled it to observe throughout that period. The position is difficult, for no public steps, such, for example, as a meeting of the Committee or the employment of the Hall of the *Shorei-kai* can be taken before the tenth of January, and, on the other hand, preparations for a representation on any considerable scale are, of course, impossible without such steps. Thus the alternatives are to defer the first performance until the end of February, perhaps even the middle of March, or to organize something on a small scale, holding the rehearsals in private houses, and then, while avoiding all premature publicity, to avoid simultaneously any needless prolongation of the twelve months' idleness. The latter course has naturally been chosen, not merely for its own sake, but also out of consideration for the members who have contributed financially to the maintenance of the Society but have been prevented by official etiquette from enjoying any compensation for their support. No subscriptions were collected during the year of enforced inaction, and it may be presumed that the Committee are unwilling to make any collection pending a renewal of the dramatic and musical performances, or to undertake anything that would encroach upon the resources which will presently be available for more ambitious representations. Under these circumstances we hear that choice has been made of a piece which involves a minimum of scenic arrangement, admits of rehearsal in private houses, and does not make any extensive demand upon the histrionic resources of the community. It will thus be possible to open the dramatic season at least a month sooner than would otherwise have been the case. There is a report, which we trust may prove accurate, that this inaugural effort will be shortly followed by a performance affording an opportunity to witness once again the delightful acting with which the French amateurs of the capital have made us familiar. As to the play which will be put upon the stage at the opening of the season, we are unable to say more than that it is rumoured to be a most happy choice, that it has been adapted by a *littérateur* of well-known dramatic ability, and that the cast includes ladies and gentlemen of four nationalities.

FOREIGNERS AND JAPANESE SECURITIES.

When the Revised Treaties go into operation, foreigners will be entitled to hold movable property anywhere throughout Japan. In view of that change, the various railway companies, says the *Tokyo Asahi*, are discussing the advisability of amending their rules in the sense of removing all restrictions upon the holding of their shares by foreigners. Railway shares, in the opinion of the companies, are movable property, and there is nothing in either the Treaties or the Commercial Code to prevent foreigners from becoming

shareholders. The same is true of the scrip of the Bank of Japan and, indeed, of all other commercial or industrial undertakings. Application will therefore be made to the Authorities for permission to effect the necessary alterations in the laws of the various companies. This move, if it be really on the tapis, which we have no reason to doubt, is a tolerably effective answer to the predictions of pessimists who maintain that the object of the Japanese after the Revised Treaties go into operation, will be to keep foreigners at arm's length as far as may be. The plain fact is that the Japanese will open every possible avenue to foreign capital. The shares of all enterprises that have been established on a profitable footing are selling in Japan at prices greatly below the figures that similarly sound and successful enterprises would command in England or America, and Japanese shareholders will naturally be anxious to invite operations which would have the effect of appreciating their property. Racial prejudice, if any exist, will have no value in comparison with that prospect.

JAPAN & THE BRITISH COLONIES.

It is, perhaps, scarcely charitable to treat seriously the comments of the *Japan Herald* on the subject of the British Colonies and the Revised Treaties with Japan. Such remarks appear to have been penned under the influence of some vertigo which is to be pitied rather than censured. The facts are too simple to permit the slightest misunderstanding. Her Majesty's Government, when revising the Treaty with Japan, explicitly excluded the Colonies from its scope, since the right is reserved to them of managing these matters on their own account. The chief purpose of the reservation was, of course, well understood. Of late years, certain of the Colonies have adopted, or shown some inclination to adopt, an exclusive policy towards Asiatics. It is an illiberal policy. If Japan attempted to adopt it towards Europeans or Americans, she would be denounced as uncivilized. Still, there are reasons, more or less valid, for its adoption by the Colonies, and at any rate the admission or exclusion of aliens is among the sovereign rights of every self-governing community. If Japan made any difficulty about the free exercise of that right by the Colonies towards her subjects, the Colonies, on their side, might prefer to remain unhampered by any treaty stipulations whatever. But Japan makes no difficulty. She consents to the insertion of a clause reserving to each of the contracting parties absolute freedom in the matter of restrictive legislation. Two of the Colonies have concluded treaties embodying such a clause. Two, we believe, have concluded treaties without the clause. Seven remain outside the pale. It is plain that whether the Colonial governments make or do not make treaties with Japan, the colonists will have free access to this country for purposes of trade, travel, or residence. They can not be discriminated against in those respects, nor is there, so far as we know, the smallest desire to discriminate against them. But with respect to the Tariff or any other matters forming the subject of special Conventional arrangement, the Colonies, so long as they choose to remain outside the treaty circle, must have the status of non-treaty states. It is their

own choice. To place the responsibility upon Japan's shoulders is childish. The Colonies can lose nothing whatever by entering into treaty relations with her, and if they do not think it worth their while to do so, that is their own affair. Much excitement is shown by the *Japan Herald* because a patent has been refused to a Canadian applicant. It denounces the refusal as illiberal and impolitic. But Japan is merely doing as all Occidental States do. No Western State gives protection to the patents and trademarks of a foreign nation unless the latter makes a reciprocal concession. Canada not having concluded a treaty with Japan, can not exercise reciprocity in this matter. No nation in the world would recognise Canadian patents under the circumstances. Even that discrimination, however, will probably disappear soon, for when Japan has amended her Law of Patents and Trade Marks so as to remove the limitations recently explained in these columns, she will enter the union of States formed for the mutual protection of the products of inventive genius, and Canada being already a member of the union, will incur the obligation of protecting and acquire the privilege of being protected. It is all perfectly simple and perfectly reasonable.

DEATH OF MRS. DIVERS.

The death of Mrs. Divers removes a lady whom long acquaintance and many amiable qualities had endeared to the Tokyo community. Mrs. Divers had not enjoyed robust health for some time, but the first indication of any cause for serious uneasiness did not present itself until the Fall of last year, when, during a visit to Kobe, she was attacked by an illness that produced temporary paralysis. Symptoms of heart trouble then declared themselves, and although the succeeding months were passed without any special aggravation of the malady, it was fully recognised that the final break-up could not be long delayed. Mrs. Divers had not reached the confines of old age, and her numerous friends must be shocked and grieved to think that the pleasant companionship which, in the natural course of events, they looked forward to enjoying for many years, has been suddenly and sadly terminated. We need scarcely add that the keenest sympathy is felt with her bereaved family.

The funeral of Mrs. Divers took place on the 13th instant, the cortege leaving the residence of Dr. Divers punctually at nine o'clock a.m., as announced. It was one of the most numerously attended ceremonies that have been witnessed in Tokyo during the past thirty years. The chapel at Sarugakuchō was filled to overflowing, and the wreaths and other floral tributes sent by sorrowing friends required about a score of bearers in addition to being piled within and on the hearse. Père Everard, assisted by two other Priests, performed the service, which was choral, and the pall was borne by present or past Professors of the Imperial University. The President of the University and all the Professors, the whole of the Foreign Corps Diplomatique, almost the whole foreign lay community of Tokyo and many Japanese friends visited the residence before the starting of the procession, and were subsequently present at the chapel, the majority also proceeding to the cemetery at Aoyama, which was not reached until half-past eleven.

BARON NOGI'S RESIGNATION.

It appears to be accepted as beyond question that the Governor-General of Formosa has resigned—definitively and irrevocably resigned. People bear freshly in mind the fact that his retirement was talked of everywhere some months ago. For reasons never clearly set forth, a section of the Cabinet decided that the administration of the island would fare better in other hands. But the Emperor appears to have withheld his consent, and possibly the difficulty of finding a suitable successor was not without effect. At all events, Baron Nogi having taken a prominent part in drafting the new scheme of administrative organization, it seemed natural that the task of putting it into operation should be entrusted to him. What complications have now arisen, we do not know. Indeed, we have no authority except that of the vernacular press for saying that the Baron has resigned. But the fact is spoken of with every appearance of certainty. It is certainly regrettable that such frequent changes should take place. A Governor-general can scarcely become familiar with the peculiar conditions existing in Formosa until he has studied them for at least a year. Thus Baron Nogi leaves his post at the very time when he has qualified himself to discharge its duties intelligently. Among foreigners he has won favorable opinions, and we are at a loss to understand why any change should be necessary.

APPRECIATION OF LAND IN TOKYO.

There has been a very marked appreciation of the market price of houses and land in Tokyo since last year, especially in the Kameido, Sunamura, Shinagawa, Meguro and Shibuya districts—that is to say, in the chief suburbs of the city. Various reasons are assigned for the change. One of the most prominent, of course, is that as all commodities have risen in price, buildings, which represent labour and material, and building sites, which represent one of the first elements of productive enterprise, have followed the general trend. But there are other factors almost exactly analogous with those that produced a similar result in 1885. Whenever stocks, debentures and public securities fall in price, land invariably rises. The vicissitudes that depress the former class of investments do not threaten the latter. In 1885, when the Consols stood at about 90, when shares of the Japan Mail S.S. Company could be bought for 35 and shares of the Japan Railway Company for 87, land was rapidly booming upwards. In 1885, also, Treaty Revision was believed to be in sight, and the inauguration of mixed residence has always been associated by the Japanese with a large exodus of foreigners from the Settlements into the interior of the country. That same idea prevails now. The suburbs of Tokyo enumerated above are just the places where enterprising men would be disposed to erect factories, and the Japanese are persuaded that factories will spring into existence so soon as ever the foreigner can get out of his present prison. It is a very erroneous notion, in our opinion. Foreigners will be extremely cautious about starting new enterprises after Consular Jurisdiction is abolished. They will wait to see how the new system

works, in the first place, and they will want to assure themselves, in the second, whether partnerships with Japanese can be arranged on a satisfactory footing, for assuredly they will not take the field alone, thus exposing themselves to the combinations which the Japanese have proved their ability and disposition to form. The tendency will be in the other direction, we think: that is to say, the Japanese will be more likely to come into the Settlements than the foreigners to go out of them. The price of land within the Settlements will consequently rise, but why the price of land outside the Settlements should go up, we fail to see. If there was money to be made by starting industrial enterprises solely under foreign management, they would have been started long ago within the Settlements, just as cotton mills have been started in Shanghai. But although cotton mills in Shanghai, projected, owned and run by foreigners, may succeed very well, since differences of nationality count for nothing with Chinese where money-earning is concerned, that is not the case in Japan. The wide-awake foreigner will look with immense care before he leaps.

THE FORMOSA RAILWAY.

The projectors of the Formosa Railway have now carried their programme to such a point that consummation is in sight if the Treasury will agree to subscribe for 45,000 shares, representing 2½ million yen. The Treasury hesitates to dip its hand so deeply into the enterprise, doubtless feeling that it would occupy a position involving considerable responsibility towards the public but not carrying with it any sufficient right to control. According to present appearances, however, there is no alternative except to accede to the projectors' proposal, always supposing that the line is to be built. The whole story of this railway seems to us most significant. Almost all the strongest men in the business field are associated with it. If any enterprise, be entitled to public confidence, surely that should be the case with an enterprise projected by capitalists and merchants whose names have never yet been linked with any failure, and whose resources are known to be as large as their shrewdness is above proof. The enterprise itself is full of promise. It has a State guarantee of six per cent.; exceptionally favourable conditions and facilities are offered by the Government, and from the day that the Company becomes a going concern, it will receive a gift of a railway already completed and running at a substantial profit. Yet the nation will not put up twenty millions to carry out the project. Evidently it is a case not of "will not" but of "can not."

A PANACEA.

Mr. Charles Garst's panacea, the single tax, fills us with admiration. It is apparently capable of curing all the ills to which flesh is heir. All land-owners are robbers, says Mr. Garst. Only take their stolen property from them in order to convert it into a public chattel, and you will have no more social evil, no more international aggression, no more of anything disagreeable. So large is Mr. Garst's faith that he even finds a mandate in the Biblical anathema, "Cursed be he

that moveth his neighbour's land-mark." We infer, therefore, that if the single tax were introduced, there would be no more "cuss-words," since there would be no more land-marks to remove. There would be an awful interval of cursing while Mr. Garst's process of wholesale removal was going on, but when it was over, a holy calm would ensue.

DIVIDEND BONDS.

The Minister of Finance, in his long and interesting statement to the Merchants' and Manufacturers' Union, speaks of issuing "dividend bonds" (*Wari-mashi-kin-zuki Kosai*) of small dimensions, as an expedient for collecting the money now scattered among the consuming classes and bringing it within reach of industrial producers. It is alleged that the idea of these bonds has been entertained for some time, but the exact details of the scheme are not as yet very clear. Speaking broadly, Count Matsukata's plan is to sell bonds of from ten to fifty *yen* denomination bearing interest at the rate of from $3\frac{1}{2}$ to 4 per cent., and to apply the money thus obtained for the redemption of the five-per-cent. bonds now in circulation. The sum saved in interest would form a dividend fund, and the project is to distribute this fund among the petty bondholders. That explanation is vague, but it represents all that we know for certain. It will be at once evident that unless the quantity of five-per-cent. bonds redeemed be greater than the total face value of the petty bonds to whose holders a dividend is distributed, the latter can't gain more than they would by buying five-per-cent. bonds in the first instance. Let us reduce the case to arithmetic. A thousand *yen* worth of $3\frac{1}{2}$ -per-cent. bonds are sold and a corresponding amount of 5-per-cent. bonds redeemed. The Treasury gains 15 *yen*, by way of reduced interest, on the transaction. Now if that sum be distributed equally among the petty bondholders, the result is that each receives altogether 5 per cent. on his bonds—viz., $3\frac{1}{2}$ per cent. by way of interest and $1\frac{1}{2}$ per cent. by way of dividend. But suppose that the distribution is limited to a section of the petty bondholders, a section selected by lot; then the interest on the petty bonds supplemented by the dividend may represent much more than 5 per cent. For example:—A thousand *yen* worth of petty bonds are sold and a thousand *yen* worth of large bonds redeemed. There results a dividend fund of 15 *yen*. Now suppose that three hundred *yen* worth of petty bonds are to be redeemed by lot, and that the dividend is to be divided among the bonds on which the lot falls. Then each of the fortunate bondholders receives $8\frac{1}{2}$ per cent.—namely, $3\frac{1}{2}$ per cent. by way of regular interest and 5 per cent. by way of dividend. Obviously that course might be pursued each year, the sum accruing from the redemption of large bonds being distributed to the holders of the petty bonds drawn for amortization in that year. The programme would practically amount to one of conversion, for unless human nature be different in Japan from human nature elsewhere, the petty bonds would be eagerly bought by all classes for the sake of the gain that might accrue to their holders in the yearly lottery, and after a few years the whole of the public debt would be converted to

a $3\frac{1}{2}$ -per-cent. basis. Some critics would probably find a good deal to say about the element of chance pervading the scheme, and the consequent danger of demoralizing the people. We remember that, in 1881, a distinguished English banker, well known in the East, submitted to the Japanese Government a plan for resuming hard money payments, the main features of the idea being borrowed from the Parisian municipal lotteries. Count Okuma, who then held the portfolio of Finance, would have nothing to do with the project, one of his chief reasons being the lottery adjunct. We may have wrongly interpreted this novel term, *wari-mashi-kin-zuki kosai*, but if our rendering be correct, hostile politicians will find in it a new weapon of attack.

"GREATER JAPAN."

The above is the title of a magazine which appears to have added an English section to its contents now for the first time, though it has reached the fifteenth number of its second volume. What is meant by "Greater Japan" we do not know. The Japanese title is *Da-Nippon*, or "Great Japan," which we have always understood to be the name of the main island of Japan as distinguished from the smaller islands of the group that form the Japanese empire. The adoption of the qualificatory "Great" as a prefix to the whole group, is not explicable on geographical grounds, and has usually been regarded as a vagary more courageous than artistic. But "Greater Japan" is still more perplexing. Mr. Matsumoto Kumpei, the editor, places himself at the feet of Mr. Stead, and Mr. Stead, among whose qualities assurance is not lacking, appropriates the homage without embarrassment, in the following words:—

"The latest offshoot of the numerous publications which may be said to have been raised from the seed scattered over the world by the publication of the first number of the *Review of Reviews*, is to be found in Japan. Unlike most of the other magazines which adopted not only the idea but the title of the *Review of Reviews*, our new Japanese contemporary has taken the title *Greater Japan*. It is an interesting publication, and one that does credit to the enterprise and editorial capacity of its editor and proprietor, Mr. Kumpei Matsumoto, whose portrait I am privileged to publish here-with. Mr. Matsumoto has been spending a few months visiting Europe, and during his stay in London did me the honour of calling upon me and explaining his ideas and aspirations. The accompanying portrait is reproduced from the photograph sent to me from Paris, inscribed 'To my Venerable Friend, Mr. W. T. Stead,' from which it may be inferred that Mr. Matsumoto is comparatively a young man. His journal, the *Greater Japan*, like all Japanese periodicals, begins on the last page, and is copiously illustrated. There is a frontispiece, a Chronicle—an article corresponding to 'The Progress of the World': then come selections from the caricatures of Asia, Europe, and America, from which I hope to be able to quote in future issues of this *Review*. We have then long articles by the editor, followed by a survey of the political and periodical literature of the world. Mr. Matsumoto is a Japanese of energy and intelligence, and I am glad to have been able to make arrangements with him which will enable me month by month to lay before the Western world the ideas of the most progressive and enterprising section of the Japanese people."

What is signified by "selections from the caricatures of Asia, Europe and America" we do not know, and we are still more perplexed to understand how Mr. Stead can have persuaded himself to believe that *Greater Japan* has been "raised from the seed scattered over the world by the *Review of Reviews*." However, Mr. Stead's comfortable convictions are neither here nor there. What we have to note is the quality of *Greater Japan* itself, and with regard to that we can honestly offer our congratulations to the editor. But he is

not strong at proof-reading. He says that Baron Yamada "has hitherto *col* but an insignificant figure in politics"; that Cambridge University, some years ago, conferred on Mr. Hamao the honorary degree of "L. L. D."; that while this number of the magazine was going to press, "a startling news was brought to *no* across the water," and that when the Germans hoisted their national flag at Kiao-chow, "they fired a statute." This last typographical curiosity may be less innocent than it looks, for inasmuch as Mr. Matsumoto's calls the Kiao-chow affair "Germany's outrage in China," he possibly shares the opinion of those who think that a statute was indeed fired into space on that occasion—a statute of international law. Apart from printer's errors, however, the English section of the magazine is good reading. The editor is bitterly opposed to the Matsukata cabinet. He does not merely join the general hue and cry: he tries to lead it. The Matsukata Ministry, in his opinion is "one of the worst governments ever formed," and the adoption of the gold standard is "the most serious blunder ever yet recorded on the pages of our financial history." Count Matsukata has the misfortune to be in charge of State affairs at a time when no Cabinet could possibly satisfy the nation. He is the victim of the time. If good, solid, vigorous abuse could overwhelm him, *Greater Japan* would contribute materially to that catastrophe. But we do not think that his political grave is yet dug.

CHINA'S SINS.

The Kiao-chow episode has been the means of eliciting some admirable expressions of opinion from the local foreign press of the Far East. One and all of the Treaty-port journals, assuming, without the least difficulty, that Germany seized Kiao-chow before making any kind of demand upon China, and that she seized it with the intention of getting final possession of Shantung—two hypotheses which, were they tenable, would invest her conduct with the character of an unprecedented violation of the principles of civilization—, unhesitatingly applaud what she has done and hold it up as a fine example for Occidental Powers in general. Thus far, however, the *N.C. Daily News* has "taken the cake" with its declaration that China's reluctance to be robbed of her territory was another example of her proverbial tergiversation and evasiveness. Another Shanghai journal now makes a bold bid against the *N.C. Daily News*. It writes:—

We understand that the Peking Government has resorted to its usual armament of lies and deception to hoodwink the Chinese people over the sad humiliation which Germany has inflicted upon China. The Central Government has instructed the provincial authorities to notify the people that the occupation of Kiao-chow is only of a temporary nature, and to warn them not to be perturbed by the occurrence.

Is not that lively? Germany herself represented the occupation of Kiao-chow as a temporary measure only. Even if she had not done so, the Chinese Government would have been perfectly justified in assuming that the occupation was not intended to be a lawless and final seizure, but that it would terminate when the negotiations about the missionary outrage were concluded. Yet because it makes that assumption the Peking Government

is denounced for "resorting to its usual armament of lies and deception." It would have been impossible, we think, for the greatest enemy of Western public morality to plan any object lesson so humiliating as the attitude of the local foreign press, with very rare exceptions, has been in this instance.

TOKYO LITERARY AND MUSICAL SOCIETY.

We desire to remind our readers that a meeting of the Tokyo Literary and Musical Society takes place this evening at 8 o'clock in the Hall of the Parish Buildings opposite the Episcopal Church in Tsukiji. This Society has already existed, for two years we think, under the name of the Tsukiji Literary and Musical Society, its membership being limited to forty. Its success was such that the enlargement of its scope so as to admit all residents of Tokyo without limit of number seemed desirable, and with that object a meeting was held on the 4th instant to make preliminary arrangements. More than sixty persons enrolled themselves then and there; Colonel Buck, United States Representative, was chosen President, and a Committee was appointed to draw up working and constitutional rules for presentation to the second meeting which is to take place to-night. The Society is not intended to encroach in any way on the sphere of the larger and more important association, the Tokyo Dramatic and Musical Society. Its object is merely to occupy the ground left vacant by the latter; to provide fortnightly opportunities for the residents of Tokyo to hold musical and literary *réunions* not requiring any of the rehearsals or other preliminary arrangements essential to dramatic representations. No reason suggests itself why Tokyo should not possess such a society as well as Yokohama. There is an abundance of musical ability in the capital, and the foreign community is exceptionally rich in specialists whose contributions to a discussion on any topic would possess great interest and value. It seems to us that the Society ought to succeed, unless, indeed, the effort of supporting it overtaxes the apathetic, one-groove mood into which foreigners residing in the East appear so prone to lapse.

THE OLD AND THE NEW.

Not many of our readers, perhaps, are familiar with a book that came like an oasis in the desert to students of the Japanese language seven-and-twenty years ago. It was called *Koyeki Mondo*, and it embodied a conversation supposed to take place between two Japanese economists—Saisuke, a man of the new school, and Gwanroku, a stiff-backed conservative. Translated into English, the book possessed no value. It became, then, a mere primer, an elementary primer, of political economy. But in Japanese it was a jewel of great price, for it brought the student into colloquial contact with two native controversialists, discussing, in pure, idiomatic vernacular, topics that belonged to the new life upon which the nation was just entering. Old fashioned subjects, genuine Japanese subjects, could be read about in a hundred-and-one little left-handed volumes, and the forms of expression used at *cha-no-yu réunions* or lovers' meetings could be acquired without great difficulty. But the novel issues of that novel time, the philosophies, the sciences, the systems, and the ideas of the Occident—how

were they to be put into a Japanese dress, and how, without such drapery, could they be introduced upon the conversational stage? No one sitting down to study Japanese by the light of the aids now available, can form any adequate idea of the perplexity and despair that beset the efforts of the unhappy student at the beginning of the *Meiji* era, when he had to talk with men who had never thought his nationals' thoughts, and to employ a language that had never been moulded to the ideas with which alone he was familiar. The *Koyeki Mondo* was a veritable god-send to him. He committed carefully to memory all Saisuke's sayings, and longed to encounter some Gwanroku whom he might astound by the perfection of his linguistic attainments and convert by the logic of economic doctrines. If any now grey-headed man recalling that page of his early experience, reads Count Matsukata's recent reply to the Merchants' and Manufacturers' Union, he can not but be astounded by the development that the Japanese language has undergone in the past five-and-twenty years. There is not the slightest difficulty now in talking about bonds and shares, about joint-stock companies, and demand, and supply, and purchasing power and convertible notes, and circulating media, and fluctuations of exchange and productive enterprises and a thousand things which had not entered the conception or the vocabulary of the Japanese when Hepburn's dictionary was compiled. If the men that died when Japan was on the threshold of her new life could be raised from the grave to-day and placed in the Diet, or in the hall of the Tokyo Chamber of Commerce, during a debate, they would be as much much puzzled to understand their country's new language as the foreign student in the early seventies, was to construct it.

GERMAN CHRISTMAS BAZAAR.

A Christmas Bazaar, in aid of the funds of the German Mission in Yokohama, was held at the Public Hall on Wednesday afternoon and evening, under the auspices of the German ladies of Yokohama, kindly assisted by several English and American young ladies. The committee of management consisted of Mrs. Meier, Mrs. Holm, Mrs. Pors, Mrs. Kleinwort and Mrs. Strahler. The small hall, in which the Bazaar was held, was draped with bunting and tastefully decorated with evergreens, with the various stalls arranged around the sides and ends, while a couple of fine Christmas trees, with their branches bowed down with imitation snow and scores of Christmas toys and bon-bons for the little ones, filled up the corners at the upper end of the hall. All the fancy articles exposed for sale on the stalls were sent from Germany, as gifts, by friends of the Mission and were especially selected as suitable for Christmas presents. The various stalls and the ladies presiding over the same, were as follow:—Tea and Refreshments: Mrs. Strahler, Miss Thomas and Miss Voigt; Bavarian Beer and Lemonade stall: Mrs. Büller, Miss Tripler, and Miss Focke; Bonbons: Miss Poole and Miss H. Tripler; the Gypsy's Grotto: Miss Smith; Toys: Mrs. Orth and Miss Moss; Fancy Work: Mrs. Pors, Miss Meier, and Miss Retz; Fancy Work, No. 2 stall: Mrs. Holm; Woollen articles: Mrs. Kleinwort; Flowers (in pots): Miss Carst. During the afternoon there was a considerable attendance of ladies and children and in the evening, when the Town Band was in attendance and played a selection of music, the hall was well filled and a thriving business done by the fair saleswomen, the unsold toys, etc., being raffled off towards the latter part of the evening. The total results of the Bazaar we understand were most satisfactory.

The *Shogyo* states that a sum of 500,000 yen repaid by the Korean Government through the 1st National Bank having been remitted in a bill payable at ten days' sight, and received by the Bank of Japan on the 13th instant, the same will be paid to the Treasury about the 22nd inst.

YOKOHAMA LODGE INSTALLATION.

The regular installation meeting of the Yokohama Lodge, No. 1092, E.C., was held at the Masonic Temple, Yokohama, on Wednesday evening, when Wor. Bro. Alfred Woolley was duly placed in the Chair by the Rt. Wor. the District Grand Master of Japan, Bro. W. H. Stone. There was a considerable attendance of visiting Brethren. After the Worshipful Master had been installed he invested his officers as follows:—

Wor. Bro. E. Flint Kilby.....I.P.M.
Bro. E. C. FoxS.W.
Bro. V. BowdenJ.W.
Wor. Bro. E. C. Irwine, M.A.....Chap.
Bro. P. Launay.....Treasurer.
Wor. Bro. Harry, J. SharpSecretary.
Bro. L. Ph. von HemertD. of C.
Bro. H. B. Haskell.....S.D.
Bro. G. SchneiderJ.D.
Bro. F. J. LiasI. G.
Bro. H. IvisonTyler.

After the ceremony, a banquet was held at which Wor. Bro. Woolley presided, being supported by the Rt. Wor. the District Grand Master, Wor. Bros. E. Flint Kilby, Dr. MacDonald, Rev. E. C. Irwine, A. R. G. Clark, A. Bellamy Brown, A. Patterson, G. Hay, J. W. Hall, Stuart Eldridge, and others. The customary toasts were given and cordially received. During the evening feeling reference was made to the loss sustained by the death of Wor. Bro. R. N. St. John, the late W. M., and his memory was duly honoured.

ACCIDENT TO THE "SAGHALIEN."

We learn that the M.M. steamer *Saghalien*, which arrived here from Kobe on Thursday morning after a passage of nearly two days, met with a serious accident to her machinery on the way up from Kobe. The vessel is fitted with three engines and, owing, so far as we can learn, to the breaking of the connecting rod, the intermediate engine was completely crippled, the piston, cylinder cover, and other portions of the machinery being broken. The *Saghalien* finished the voyage under her other two engines—the injured one being disconnected—and the help of her sails, arriving only 14 hours late. The necessary repairs are of considerable magnitude but the company has resolved to merely patch up the defects here and send the *Saghalien* home to Marseilles, where she will probably be condemned. The despatch of the mails from Yokohama will in no way be delayed, we understand.

KOBE.

A correspondent of a Hawaiian journal, writing from Kobe, says:—

Kobe is a pleasant place for home or for business, the large foreign population having some part in the management of the municipality. But judging from appearances on the street there is a large consumption of whiskey and soda. It is the same sad story all through these Eastern ports. In the foreign cemeteries are the graves of many young men of dissipated lives that might have been honoured and useful were it not for this blight of alcohol, more to be dreaded than the bubonic plague or the cholera in such instances. The city streets are wide and the buildings substantial in the foreign settlement. There are more and finer new Japanese buildings than I have seen elsewhere and of two stories. So with the stores, several of them are of brick and two stories in height. But in this country of fires and of earthquakes, one hardly knows which to fear the more, the toppling bricks or the tinder box of wood. I have never noticed till I arrived in Kobe that what I supposed was a smearing of the house with lampblack instead of oil paint is really charring of the outside of the wood for preservation against the weather. The "cock-tail" has doubtless driven many a nail in many a coffin but we did not know that its results are so much *en evidence* in the settlement cemeteries.

TENURE OF LAND BY FOREIGNERS AND THE "BU" QUESTION.

EVERY one, we presume, is acquainted with the fact that although the articles of the Japanese Civil Code relating to the leasing of land are not yet operative as regards foreign residents, they are in full force among the Japanese themselves. Every one ought also to be aware, in view of the repeated explanations published in these columns, that although leases for an indefinite period are not forbidden by the Code, power is reserved to the Courts of Law to fix a period for such a lease at not less than 20 and not more than 50 years, on receipt of application duly made in that sense by lessor or lessee. In other words, a lease originally made for an indefinite period may be converted into a finite lease, whereas a lease originally made for a finite period cannot be altered. These provisions will apply to leases concluded between foreigners and Japanese after the Revised Treaties go into operation. But pending that event, a lease for an indefinite period between a foreigner and a Japanese would obviously be a violation of the Code, since the Law Courts are not competent to enforce against a foreigner the reservations prescribed by the Code with regard to such a lease. Hence the Local Authorities decline, at present, to register leases for an indefinite period where a foreigner is the lessee. We read in the columns of the *Kobe Chronicle*, however, that the Hyogo Local Authorities go a good deal farther than that: they decline to register leases for a longer period than 25 years, and our contemporary says that they are acting on secret instructions received from the Japanese Government. Secret instructions, as we have already said, are beyond the range of discussion. We know nothing about them, and are altogether sceptical as to their existence. This we do know, however, that if the Revised Treaties secure certain privileges to foreigners, and if the Local Authorities attempt to interfere with the enjoyment of those privileges, there will be a simple and certain method of correcting the abuse. As to the *Kobe Chronicle's* apprehension that the Government itself may deprive foreigners of their lawful privileges by issuing secret instructions to local authorities in a contrary sense, we do not think the hypothesis worth consideration. The Japanese Government has never shown any disposition to violate its treaty engagements. In the extremely improbable event of its attempting such a flagrant breach of faith as the *Kobe* journal suggests, the Foreign Representatives are at hand to obtain justice for their nationals. The *Kobe* paper, however, seems to have had its confidence in the Japanese Government impaired by an incident which it thus describes:—

The foreign public has not yet forgotten that by secret instructions issued by the Japanese Government a discrimination was made between foreigners and Japanese in the matter of the payment of Customs duty; that this discrimination, which formed a distinct violation of the Treaties, continued for ten years before it was by a mere accident discovered; and that though the practice has now been discontinued, no restitution has ever been obtained.

The facts of this case are very simple. They do not appear to warrant the construction put on them by our *Kobe* contemporary. It having been originally stipulated by treaty that foreign coin should circulate in Japan at its corresponding weight in native coin of the same description, dollars were received at the custom-house at their weight in *bu*, namely, 3.11 *bu* per dollar. In other words, specific duties which appear in the Tariff in terms of *bu*, were converted into dollars at the rate of 3.11 *bu* to 1 dollar, for the convenience of any one desiring to pay in dollars. In 1874, the Japanese Government issued a Notification declaring that *bu* would no longer be received from Japanese subjects, and that the dollar should be reckoned at 3.15 *bu* for payments by them, such being then the market price of the *bu*. For foreigners no change was made. They remained free to pay the duties in *bu*, and the natural assumption was that if they could obtain *bu* in the open market at a better rate than that allowed by the Customs, namely 3.11, they would buy *bu* and use them for making payments. Under such circumstances there can not justly be said to have been any discrimination against the foreigner. On the contrary, the discrimination, if any, was against the Japanese, for whereas *bu* could generally be bought in the exchange shops at a cheaper rate than 3.15, the Japanese importer had always to make his customs payments at that figure. Foreign importers took advantage of the latitude thus given, as is proved by the fact that, during the period 1874-94, they paid into the Customs more than twenty millions of *bu*, obtained in the market at rates varying from 3.15 to 3.45 and received by the Customs at 3.11. Perhaps we ought to qualify this statement by putting it into the form that more than twenty million *bu* were paid into the Customs on behalf of foreigners. The foreigner himself may have handed out dollars at 3.11, and his *compradore* may have been clever enough to buy *bu* and discharge the duties with that coin. Be that as it may, to say that there was any secrecy about the affair on the part of the Japanese Authorities seems quite erroneous. The Notification was published openly, and the Customs Returns showed in detail all the payments made by Japanese direct importers, separating the figures from those paid by foreign importers, and adding the quantity and nature of the imports in every case, so that a

glance at the Returns furnished accurate information as to the exact rates levied from Japanese. It appears probable that had an ample supply of *bu* been obtainable, no objection would have been made to the system. But from over three millions annually the payments in *bu* gradually dwindled to some two hundred thousand, and the question as between 3.11 and 3.15 was then (1894) raised, with the immediate result that the use of *bu* was altogether put an end to. Very likely nine out of every ten foreign importers never examined the Customs returns with sufficient care to detect the above point, and never knew that their *compradores* were making payments on their behalf in *bu*. But from the point of view of the Japanese, there was nothing to suggest such indifference, and certainly neither secrecy nor wilfully unfair discrimination can be justly charged against them.

SOCIAL MORALITY IN JAPAN.

AN American critic, writing from Kyoto to the *Hyogo News*, takes for his text an article recently published in these columns on the subject of the social evil in Japan. He thinks that he has discovered a wide gulf between his own views and those of the editor of this journal, and knowing that his conclusions, like ours, are based on experience spreading over more than a quarter of a century, he endeavours, at the outset, to account for the discrepancy, and finds two explanations; one that whereas the editor compared European countries with Japan, the critic takes as his sole standard of comparison America, with which alone he is acquainted; the other, that whereas the editor's experience is probably confined to Tokyo and a few other treaty-port cities, the critic has travelled widely and lived almost constantly in Japanese hotels from Hokkaido to Kiushu. It is a very singular fact that while analysing thus carefully these hypothetical points of variance, our critic fails to detect the real and radical distinction, namely that he and we are discussing different topics: we spoke simply and solely of the social evil; he speaks almost entirely of social morality. It is, indeed, with a feeling of bewildered amazement that we peruse his comments. How can intelligent controversy be conducted if one of the controversialists wanders entirely out of range of the subject of discussion, and constructively attributes to his opponent opinions which the latter has not given the slightest hint of holding? Our topics were simply the arithmetic of prostitution in Japan, and the wisdom of the licensing system. Our critic attacks us on the subjects of concubinage; the admission of *geisha* to private residences and their employment at entertainments in tea-houses; the immorality of waitresses at inns; the prevalence of divorce; the

looseness of the Buddhist priesthood, and the indifference of the upper classes to these unhappy conditions—not one of which subjects was even remotely alluded to in the article criticized. Taught by experience how necessary it is to guard our views against misconstruction, we were careful to conclude our recent article upon this subject with the words:—"We must ask that our position in this matter be not misunderstood. It is not for one instant our purpose to deny that there are terrible abuses in Japan, and that earnest men * * * may do much good by their efforts to effect reforms." If our Kyoto critic had read these words, he ought surely to have perceived that we were not posing as defenders of Japanese social morality as a whole, and if he had read our article with commonest attention he must have seen that it referred to only one phase of the general question, and that it could not with any semblance of justice be construed in the broad sense attached to it by him.

Into a controversy of the kind now mapped out, we are extremely reluctant to enter. The task is one of immense dimensions and its fitness for the columns of a daily newspaper is very problematical. Moreover, some of the abuses which we had in mind when penning the close of our last article are precisely those now indicated by our critic. But it appears to us that he labours under certain unfortunate misconceptions. For example, he sets out by saying "Japan has, America has not, legalized concubinage." If these words are intended to mean—and they appear to bear only one meaning—that concubinage is recognised by law in Japan, they are diametrically opposed to the truth. Concubinage is not more legal in Japan than in the United States of America. The law does not recognise it in any way. Further, our critic's notion of the *geisha* seems to us to be very distorted. The *geisha* is primarily a dancing girl. She knows perfectly well how to be that and nothing more, and when she is summoned to private residences or to entertainments at tea houses where Japanese ladies and gentlemen are guests, the most rigid moralist could not detect even a shadow of questionable behaviour on her part. She carries the viands to the convives, pours out wine for them, plays the *samisen*, dances and sings with the most absolute regard for all the proprieties. No foreign lady, let her be ever so delicately and fastidiously educated, could be offended by the contributions that the *geisha* makes to social convivialities. We read with much amusement that when the Governor of Hongkong visited Kyoto, "they thought they could do no better than call in *geisha* for his entertainment," and that "the doughty Governor's indignation was not expressed in the mildest phrases." The "doughty Governor's" so-called "indig-

nation"—we speak from knowledge, having been actually present—took the form of enthusiastic applause, and of a statement that anything more graceful, modest, and, at the same time, debonnaire, he had never witnessed. Evidently the Kyoto writer imagines that any entertainment including *geisha* among its features is an immoral orgie of the worst kind. Nothing could well be more erroneous. In all Japan from year's end to year's end there is not to be witnessed any spectacle which, in point of immorality, approaches the *ballets* nightly performed at the principal theatres in great Western cities. On the other hand, that the majority of the *geisha* are immoral, that they exercise an undoubtedly demoralizing influence, and that the graces with which they drape vice tend to hide its deformity, are facts not to be gainsaid. That the abolition of the *geisha* would be a salutary step we can not entertain any doubt. It would indeed be a pity that the beautiful dances and charming customs which they cultivate and perpetuate should be banished from Japanese society. But these things can be preserved without impairment at places like the Maple Club in Tokyo, where the waitresses are trained *danseuses* of the highest proficiency and, at same time, lead lives quite beyond the breath of reproach.

Of course, in speaking thus of the *geisha*, we touch only the fringe of the large subject introduced by our critic. Into its various phases we must decline to follow him here. Nothing that he has written about concubinage in this country, or about the sale of girls by their parents or guardians into a life of shame, seems to us too strong. But we protest most emphatically against being placed publicly in the position of having advanced assertions which we never made and of having formulated theories entirely strange to us. Our statement was that "in point of arithmetic the social evil is no worse in Japan than it is in any Western country." Beyond that we did not go, and we refuse to be now saddled with the duty of defending ourselves against charges which have no basis. We know our critic to be a thoroughly sincere man, anxious to do good and well disposed to Japan. He has challenged us to a needless controversy for in many important respects we think as he thinks, and, at any rate, intelligent and frank discussion of the subject can scarcely be attempted in the columns of a newspaper.

According to the *Tokyo Asahi*, a bill was lately presented to the Municipal Council of Tokyo urging that the monthly professional tax on singing girls should be raised from 1 yen for the 1st class and 50 sen for the 2nd to 4 yen and 2 yen respectively, while the taxes on actors were to be increased to 15 yen instead of 10 yen as heretofore. As for the wrestlers, an increase of 50 per cent. was proposed, story-tellers being taxed 2 yen.

THE QUESTION IN CHINA.

AN "extra" published last evening by the *Fiji Shimpō*, contains the following telegrams from its special correspondent:—

Peking, 15th Dec. 1.05 p.m.

The Government, replying to the inquiry of a certain Foreign Representative, denies positively that Germany has made any demand for territory in the neighbourhood of Swatow (the reference is probably to Samsha harbour in Fukien), and adds that such a demand may possibly be preferred hereafter, but that if it is, England seems likely to oppose it.

Russia, in order to get the Japanese garrison out of Weishaiwei without a day's delay, is taking steps for lending to China the money required to pay off the remainder of the Indemnity.

We are not justified, of course, in accepting the above telegrams as correct, especially the part relating to Great Britain's intentions. There is no doubt that England's interests make for the conservation of the Chinese empire, temporarily at any rate, and that English public opinion, as indeed the public opinion of all civilized nations, would be strongly opposed to an act of spoliation such as the *Fiji's* correspondent attributes to Germany. But between the mere expression of public opinion and its translation into inter-State action there is a wide interval, and the question is, would England be likely to cross that interval for the sake of keeping Germany out of Samsha. There is one fact that must not be lost sight of in discussing this matter. It is the Bocca Tigris Convention of 1846, to which, according to a Reuter's telegram, allusion was recently made by *The Times* in connexion with Germany's alleged proposal to occupy Samsha. The third and fourth articles of that Convention run thus:—

3.—It is stipulated, on the part of His Majesty the Emperor of China, that on the evacuation of Chusan by Her Britannic Majesty's forces, the said island shall never be ceded to any other foreign Power.

4.—Her Britannic Majesty consents, upon her part, in case of the attack of an invader, to protect Chusan and its dependencies, and to restore it to the possession of China as of old. But as this stipulation proceeds from the friendly alliance between the two nations, no pecuniary subsidies are to be due from China on this account.

What is meant by "Chusan and its dependencies?" The Bocca Tigris Convention was negotiated mainly with reference to China's protracted reluctance to admit British subjects to Canton. The first epoch of that reluctance culminated in acts of violence in 1840, the immediate results of which were the despatch of Sir GORDON BREMER's expedition, the occupation of Chusan and Kulangsu, and various military operations. These islands were subsequently held as security for the fulfillment of the engagements made by China in the Treaty of Nanking (1842) namely, residential and trade facilities for British subjects in Canton, Amoy, Foochow, Ningpo and Shanghai; the cession of Hongkong, the payment of an indemnity of 21 million dollars, and certain minor concessions. But in the one point of opening Canton, China found herself unable to keep faith, and after

four years of waiting, the British Government withdrew the garrison from Chusan, concluding, at the same time, the Bocca Tigris Convention. Looking merely at the letter of the Convention, "Chusan and its dependencies" may be interpreted to mean the group of islands at the mouth of the Yangtze River. But looking to the circumstances under which the Convention was concluded, its intention would appear to have been the insurance of the whole coast between Canton and the mouth of the Yangtze against foreign aggression. Germany at Samsha would be planted between Hongkong and Chusan. She would virtually command the mouth of the Yangtze as compared with England at Hongkong. Is it probable that England, with the Bocca Tigris Convention in her pocket, would submit to that very material change of conditions? We can not think so. At the time of the Liaotung affair, when public excitement ran so high about the *coup* made by the Three Powers and about the transfer of the centre of gravity of Far-Eastern politics to Berlin—St. Petersburg would have been a more accurate analysis—, we ventured to point out that England, quietly and without seeking any one's coöperation, had made a more momentous and significant stroke off her own bat by sending a squadron up the Yangtze and guaranteeing the neutrality of the greatest water-way in the East, the line of division between northern and southern China. The most superficial observer could not mistake the import of England's action on that occasion. It was an open declaration that she intended to preserve the continuity of the policy mapped out in the Convention of 1846, and that her resolve was to guarantee complete freedom of trade, and full security from foreign aggression, for the regions tapped by the Yangtze River. The idea of England's entering into an agreement, or accepting even the bare suggestion of an understanding, with any European Power to map out mutual "spheres of influence" or lines of partition in China is not to be entertained for an instant. Without pretending to claim any high standard of international morality for the British nation, we do allege that a plundering project of that nature would be hooted throughout the length and breadth of the land. But during the long course of England's commercial relations and unhappy quarrels with China, extending over an interval of 57 years, there has been clearly indicated a policy which may be said to have been traced with the blood of her soldiers not less than with the pens of her diplomats. Virtually by her strength alone the coastwise provinces of Kwangtung, Fukkien, Chehkiang and Kiangsu have been opened to foreign trade, and the water-way from the two last to the seven inland provinces of China—the provinces extending from Burmah

to the lower reaches of the Yangtze—has been kept open. That there has been any deliberate scheme of aggression on such a huge scale, we do not think of asserting. But events have assuredly shaped themselves so that England, if confronted with the contingency of foreign aggression in the districts lying between the mouth of the Yangtze and Hongkong, would be justified in pointing to the history of her relations with China since 1840, and in claiming that a sphere has been delimited for her by a train of incidents not to be misconstrued or minimized.

Japan's position too seems not unlikely to demand very careful consideration at an early date. No one can pretend to think that the conditions under which she was induced to retrocede the Liaotung Peninsula and the northern littoral of the Yellow Sea, have not changed radically, or that the change has not been brought about by the very Powers at whose pressing instance she agreed to surrender the fruits of her victories. She stepped out of southern Shingking because Russia, Germany and France declared that her presence there would render Korean independence illusory. How has Korean independence fared since then? Japan may have to reflect whether she can allow herself to be bought out of Wei-hai-wei with Russian money. Or should the negotiations now going on between Berlin and Peking fail to eventuate in the evacuation of Kiaochow, she may have to reflect whether she can afford to be excluded from both of the peninsulas that command the entrance to the Gulf of Petchili.

SAILING DIRECTIONS.

Captain J. J. Mahlmann's excellent work entitled "The Inland Sea and Coast Pilot, Sailing Directions," has been so much appreciated by sea-faring men that it has reached its second edition. Many additions have been made and corrections inserted so as to bring it up to date, and it is now a volume of 241 pages, abounding in useful information. The author adheres, of course, to his familiar method of compilation—question and answer—which seems admirably suited to impress the main facts of any problem of navigation on the mind of the student. Presumably a thoroughly competent Inland-Sea pilot must carry in his head all the information contained in this book. It is a formidable task, but the effect of Captain Mahlmann's labours in lightening it can not fail to be substantial. At the close of the book there are some most interesting records of typhoons that have visited the coasts of Japan during the past five years. The technique of the volume is very good, and reflects credit on the publishers, the *Higo News Printing and Publishing Company*.

COLLISION IN THE BAY.

About 6 o'clock on Saturday evening a collision occurred off Sagami, at the entrance to Tokyo Bay, between the *Hokushiu Maru*, owned by the Hokuyetsu Kisen Kabushiki Kaisha, and the N. Y. K. steamer *Kinshiu Maru*, Capt. Sommer. The *Hokushiu Maru* was leaving the Bay for Otaru, and the *Kinshiu* coming up to Yokohama, from Kobe. The *Hokushiu* appears to have been trying to cross the bows of the *Kinshiu*, but failed to effect this, crashing into her bows on the port side, about

the break of the fore-castle, and denting in or breaking a number of plates and frames from the water line to the bulwarks. The *Hokushiu Maru* received some damage to her cut water and bow, which is twisted out of shape. Neither of the steamers received any serious damage below the water line, and both arrived in Yokohama harbour on Monday morning.

ENTERTAINMENT TO MR. AND MRS. ADAMS.

Mr. Kondo, President of the Nippon Yusen Kaisha, and Mrs. Kondo entertained Mr. and Mrs. Adams, who are now on a visit to Japan, at the Maple Club on the evening of the 13th instant. Among the guests were Mr. and Mrs. Kato, Mr. and Mrs. Iwanaga, Miss Kondo, Miss Howe, Mr. Kawada, Mr. and Mrs. Kioka, Mr. and Mrs. Ogawa, Mr. and Mrs. Yoshitaka, Mr. and Mrs. Tanaka, Mr. and Mrs. Duer, Mr. J. A. Glover and Captain and Mrs. Brinkley. An exceptionally skilled performance of music on the *koto*, *shamisen*, *shakuhachi* and *kobu* was followed by a display of *legerdemain*, and by many dances of great beauty and artistic merit. Dinner was served in the most elaborate Japanese style, the perennial *saké* being supplemented, however, by claret and champagne.

THE GERMAN COMMERCIAL.

A correspondent of an East Anglian paper, quoted by the *London and China Express*, speaks thus of one of the results that came from the establishment of the German and Austrian mail lines to the Far East:—

It was curious to find that the merchants of Hongkong, shrewd, quick-sighted, active business men though they be, found a satisfactory solution in a fact apparent to them, but which is only an incident flowing from the cause: It was the invasion of the German commercial traveller would fail to fit the German who fills that office. In education a man of high attainments, nearly always a musician, invariably a linguist, well-read in history, familiar with the finer literature of, at least, his own country and the arts of others, polished in manner, and delightful by his wide catholicity in conversation, he came as a revelation to the East. Possessing these personal qualities, he was also gifted with a native shrewdness as to business generally, and a thorough knowledge of every detail of his own particular branch. He was able to describe methods by which the article he sold was manufactured, and to tell where and how the raw material was prepared, and its cost at any stage. Naturally enough the Hongkong merchant was interested and even fascinated by such plausible men, and gave his orders with a lavishness denied to his British correspondents, who were less favoured in address and *savoir faire*. The German commercial visitor was a welcome guest at the clubs, where his music or his conversation was as welcome to the colonial official body as to the merchants; and he gathered there the results of observations continued over periods of years by men who were lookers on, and could form without prejudice more accurate opinions on the current and tendencies of trade and demand than those who viewed it more closely. From this information he made reports to his employers, and they, no less ready than he, were quick to take advantage of them. It may be as well to say here all that will be necessary about the commercial traveller in these articles. In the long journeys I took in various ships in the last few months, I had personal opportunities of meeting several hundreds representing a varied interest, and hailing from Great Britain, the United States, Germany, France, Italy, and Austria. In the close intimacy which steamship travel imposes, no fellow-passenger could fail to find reason for fully endorsing the opinion I have paraphrased above. Considered as a man of the world, the German commercial traveller is far above his competitors, and the success of his trade indicates his capacity in the mercantile rivalry, unless it be attributed to cheaper goods.

The date of enforcing the Leaf Tobacco Monopoly Law is at hand. Prices have risen considerably in consequence of the failure of the tobacco crop this year, and in view of this fact a project is on foot to import leaf tobacco from abroad with a view to keeping down domestic production. The tobacco merchants in the capital, asserts the *Shagyo*, are exerting themselves to present a memorial to the Government, urging that foreign leaf tobacco should be taxed in the same way as the domestic leaf until the revised treaties come into operation.

JAPANESE FACTS AND COMMENTS.

Some Liberals in Yamato lately passed a resolution that since they could not place confidence in the existing Cabinet they would present an Address to that effect immediately on the reassembling of the Diet.

According to the *Nichi Nichi*, a scheme is on foot to construct a tramway in Kusa-gori, Tango, to facilitate communications with various sections of the naval port of Maizuru. Another line is to be constructed between Maizuru and Yobemura, a distance of 12 miles, with a capital of 90,000 yen.

A draft of the Penal Code revised last year was submitted to the Judicial Council for approval and further amendments were made. It is now ready for presentation to the Diet. The revised Code, asserts the *Shogyo*, differs widely from the existing system, especially in provisions relating to the increase of punishment for repeated offences.

The *Tokyo Shimbun* states that a reply from the Hawaiian Government with regard to the late emigration affair having recently been received by the Foreign Department, through the Japanese Minister, Mr. Shimamura, necessary instructions are shortly to be given him with a view to the amicable settlement of the complication without the intercession of an arbitrator.

Statistics published in the *Nippon* show that the actual number of Naval Officers on the first reserve on the 1st instant was as follows:—Admiral, 1; Vice Admirals, 9; Rear-Admirals, 8; Captains, 17; Commanders, 11; Lieutenants, 16; Sub-Lieutenant, 1; Inspector-General of Machinery, 1; Chief Inspectors of Machinery, 4; Inspector, 1; Chief Engineers, 4; Engineers, 2; total, together with non-commissioned officers, 108. Officers on the second reserve numbered 82.

Commenting upon the proposed annexation of Hawaii by the United States, the *Kokumin* says that a question must naturally arise as to how the rights of Japan are to be dealt with. Mr. Sherman, in the capacity of Secretary of State, has already declared that he will not impair the privileges now enjoyed by the Japanese in Hawaii, so that the sanction of the annexation scheme by the Senate will not be attended with danger to Japan's rights in the islands.

The kerosene industry of Japan, alleges the *Osaka Asahi*, has made marked progress of late. Twenty-five years ago, the annual output did not exceed 70,000 *koku*, but it rose to 150,000 *koku* in 1835, and to 200,000 *koku* in 1896, while by 1897 it had swelled to 300,000 *koku*. Improvements in the processes of working the wells will, it is expected, enable the producers to realize a considerable profit. The authorities appear to have determined to send experts to Russia and America at the cost of 20,000 yen, for the purpose of studying this branch of industry.

According to the *Tokyo Asahi*, cases of dysentery throughout the empire up to the 9th instant totalled 89,427, of which 22,310 proved fatal. The cities and prefectures from which more than 5,000 patients are reported are as follow:—Tokyo, patients 7,022, deaths 2,101; Kanagawa, patients 6,346, deaths 1,358; Niigata, patients 7,553, deaths 1,767; Gunma, 5,693 and 1,264 respectively; Shizuoka, 5,693 and 1,729; Yamanashi, 9,524 and 2,061; Nagano, 5,309 and 1,220.

The 31st ordinary general meeting of the Tokyo Tramway Company was held on the 10th instant at the Company's Office, when thirty-five shareholders were in attendance, representing altogether 10,595 shares. Mr. Mudakuchi, from the chair, presented the report and accounts. He said:—Owing to an alteration in our bye-laws the period under review consists of five months only. The gross receipts during this period amounted to 20,070,703 yen, the average per mensum being 54,140 yen. December is a month in which great profits are re-

alized, so that had our fiscal period not been changed receipts would have stood at a higher figure. When the appreciation of commodities as well as the rise in wages are taken into consideration, the results of the five months working are far from being unsatisfactory. A dividend of 35 per cent. was declared.

The amount of kerosene oil recently transported from Yokohama to various parts of the country, according to the *Tokyo Asahi*, was as follows:—Anchor brand, 35,390 cases; "Moon," 5,399; "Chester," 128,388 cases; "Comet," 8,684 cases; "Sumatra," 31,357 cases; total, 909,216 cases.

At the time of the enforcement of the Trades Tax Law, newspaper business was exempted from taxation under the classification of "higher trades." For the same reason the Governor of Tokyo, in his estimates for the 31st year, inserted a clause excluding journals from taxation, but this action was vehemently opposed by the standing committee, who have decided to levy a local tax on newspapers just as if journalism was an ordinary occupation.

Information from Formosa received by the *Nichi Nichi* announces that on the night of the 29th ultimo about forty insurgents attacked the local administrative office in Teng Shan prefecture and carried away a sum of 3,700 yen belonging to the Government. In this assault some policemen were severely wounded. Two gendarmes had previously been reconnoitering the neighbourhood and one was shot by the mob from an ambush.

The *Hochi* states that loans issued to the public by the Bank of Japan during last month amounted to 90 million yen. This figure is nearly equal to that recorded at the end of last year, but as demands for an additional 10 millions are likely to be sent in towards the close of the year, the total loans will probably reach 100 millions. Such an enormous figure has never before been attained in the past three years, although a gradual falling-off in the demand for capital is expected in the future. No opportunity seems to present for the Bank of Japan to increase its rates of interest.

According to the *Yiji*, match wood and materials for match boxes exported from Kobe for the ten months ending in October this year amounted to the following figures:—To Hongkong 2,431,850 bundles valued at 23,279 yen; to China 5,916,750 bundles valued at 580,408 yen; to America, 6,000 bundles valued at 5,400 yen; total 8,408,600 bundles worth 82,225 yen. The figures for boxes were—Hongkong 43,215,500 bundles worth 7,006 yen; China, 241,388,400 bundles worth 28,411 yen; India, 540,000 bundles worth 7,002 yen; total 334,643,900 bundles worth 42,420 yen.

With regard to the steady increase of titled members of the Diet, it is rumoured that a further appointment of ten members will be made by special Imperial sanction prior to the opening of next session. The present Cabinet, however, having accepted recommendations from various quarters without due consideration, the number of candidates is reported by the *Mainichi* to have reached 150. The Cabinet is seriously perplexed in regard to the selections to make from this number. Another rumour is afloat that the candidates having already been selected, a day will shortly arrive when some strange and unexpected appointments will be announced.

According to the *Chuo*, the Tokyo Rice Exchange, which has been deliberating for some time upon the comparative quality of foreign rice, has decided as follows:—(1)—Foreign cereals to be received or delivered in place of the domestic product shall come exclusively from Korea, Annam, Siam, and Burmah. (2)—Rice from the three last mentioned countries shall be quoted from 1.50 yen to 3.50 yen lower than the rate fixed for rice dealt with by the Exchange. (3)—One *sho* of foreign rice shall be regarded as weighing 380 *momme*, thus converting it into the same measure as that used for coal. (4)—The

present rules for the receipt and delivery of domestic rice shall be observed in foreign transactions. (5)—The receipt or delivery of foreign rice shall be undertaken by means of samples, and whenever any of extra fine quality is found, the comparative value shall be raised at the time of delivery. (6)—These provisions shall be enforced for time bargains at three months' sight, for which the first meeting will be held in January of the 31st year of *Meiji*.

An Imperial Ordinance was issued on the 9th inst. embodying regulations for the organization of a Forestry Council. The Council, subject to the control of the Minister of Agriculture and Commerce, is to investigate problems connected with the registration or withdrawal of land set apart for forests; the appraisement of the value for purchase of the same, as well as the settlement of compensation. The date of meeting is likewise to be determined by the Minister on application by a Local Governor. The Council will consist of a president and fourteen members selected from among high officials, as well as from the standing committees of cities or prefectures.

The excess of imports over exports, remarks the *Hochi*, grows larger and larger. Yokohama and Kobe alone during last month returned an amount of seven million yen. Although the return of trade in other ports has not yet been compiled by the Finance Department, and is not therefore at hand for comparison, the figures for last month added to those for October indicate an excess of imports to the amount of 53,315,949 yen; exports and imports from January to October aggregating 131,302,108 yen and 177,868,698 yen respectively. The figures for Yokohama and Kobe for November were, 13,697,992 yen in exports and 20,448,051 yen in imports, which, together with the above, make a total of 145,000,800 yen and 198,316,749 yen respectively.

Arrivals of foreign rice, remarks the *Mainichi*, continue. But as the grain is steadily transported into the interior, prices remain unaltered. The Mitsui Bussan Kaisha having entered into a contract for the direct import of 100 tons of Rangoon rice, two or three other merchants immediately followed their example by opening negotiations with three firms in Yokohama—Messrs. Samuel Samuel & Co., Messrs. H. Ahrens & Co., and Messrs. Raspe & Co., for the import of Rangoon cleaned rice to the amount of 500 tons at 4.70 or 4.80 yen per bag. Shiching grain is now quoted at 4.85 yen, while Tonking rice fetches 4.30 yen owing to the scarcity of stock.

The *Kokumin* states that a general meeting of the Cotton Spinning Guild is to be held in Osaka on the 10th instant for the purpose of discussing problems touching the encouragement of this industry the abolition of the Income Tax Law, and the promotion of facilities for foreign exchange. The gist of the bill for the proposed encouragement of the cotton industry is as follows:—

Art. I.—Any member of the guild who takes charge of the export of cotton yarns to foreign countries (Korea, being regarded as on the same footing as Japan, is excepted) shall be granted a subsidy for the encouragement of export.

Art. II.—The money to be appropriated to this subsidy shall be collected in proportion to the amount of manufactures (fine yarns of 20's excepted) undertaken during the 1st half of this year.

Art. III.—In granting an encouragement subsidy steps shall be taken to secure a tender from each member, so that contracts may be concluded.

V.—Parties who have seemed such contract will be at liberty to undertake export either through sellers or direct. The number of bales placed in their care must all be exported within the specified term.

Note.—Cotton yarns for export may be either the product of the contractors themselves or of any of the members, no distinction being made.

Art. VIII.—If the contractor fails to export the goods within the specified period he shall be required to pay double the amount of money contracted for as compensation for breach of faith.

Note.—This however, does not apply to cases in which export becomes impracticable on account of natural calamity or other unavoidable causes.

At the ordinary general meeting of the Progressionist party held on the 12th instant, the following resolutions, as published in the *Nippon*, were passed:—(1)—Steps will be taken to

enquire into the blunders committed by the present Cabinet, so that its responsibility may be clearly determined. (2)—The Party will endeavour to preserve strict discipline among officials and to secure the reform of the administration; to adjust the finances, promote the national resources, and reduce the national armaments to a safer basis, so that the country's prestige may be efficiently maintained. (3)—Opposition shall in no way be relaxed against the government in regard to the increased taxation scheme until such time as administrative reform and financial adjustment have become accomplished facts. (4)—Radical changes in the Formosan civil administration shall be striven for.

According to the *Tokyo Asahi*, the editor of the *Tohoku Nippo*, a daily journal published in Niigata, was sentenced to six months' imprisonment and fined ten yen, and the printer to one month's imprisonment with a fine of five yen, for libelling the Ministers of State.

That the Kodokai would, sooner or later, be dissolved could scarcely be doubted, says the *Tokyo Asahi*. Several members recently removed their names from the list, while others have asserted that the party had better return to its original elements at once than continue as at present.

Census returns published in the *Nichi Nichi* show that the number of Japanese residents in Wonsan, Korea, during last month totalled 1,421, of whom 876 were males and 545 females. Together they constituted 324 families. Their numbers have decreased by 59 and five families respectively, as compared with the previous month.

The Japan Military Art Society recently held a meeting at the Municipal Council Hall, Kyoto, to discuss questions relating to the amendment of its regulations and the establishment of branches. According to investigations completed on the 1st instant and published in the *Fomuri*, the number of active members of the Society totalled 78,361 (their contributions amounting to 79,408 yen) while non-active members aggregated 40,375, with contributions of 5,577 yen.

On the afternoon of the 12th instant, a grand meeting of the Liberal party in the Kwanto districts was held at Omiya, Saitama prefecture, when more than 500 members were present. The following resolutions were passed:—(1) Since the present Cabinet has committed every form of blunder and violated the Constitution in all directions, thus bringing about serious corruption of public morality, a strong vote of censure should be passed immediately on the re-assembling of the Diet so that the Cabinet may be radically reconstructed. (2) No confidence being placed in the Cabinet, opposition shall be organised against the increased taxation schemes, which are nothing but a result of the Cabinet's blundering.

The capital of the Tokyo Hydrostatic Electric Company was originally fixed at three million yen, one-third of which was subscribed by the inhabitants of the district where the source of power was situated. These people have since urged the Company to commence business by reducing the capital and reserving the right of distribution of shares until a more favourable opportunity matures. The suggestion was accepted after deliberation and the capital has now been reduced to two million yen. The company proposes to hold a general meeting in January. The first calls on shares will probably be made in February or March.

Investigations completed at the Japanese Consulate in Lyons and published in the *Shogyo*, show that the average supply of silk from China, Italy, Japan, and other countries for the past three years was as follows:—China, 5,292,000 kilogrammes; Italy, 3,266,000 kilogrammes; Japan, 3,102,000 kilogrammes; other countries in the East, 1,326,000 kilogrammes; France 815,000 grammes; Austro-Hungary 277,000 kilogrammes; British India, 276,000

kilogrammes; Spain, 96,000 kilogrammes; total, 4,450,000 kilogrammes. In the above figures, the amounts set down to Japan, China, and British India represent the quantity exported, but those for other countries embody the gross amount of production. According to present figures the ratio of consumption of silk in France is 46 per cent. for China, 21 per cent. for Japan, 14 per cent. for Italy, 13 per cent. for Turkey, and 6 per cent. for other countries.

A meeting of the Cotton Spinning Guild is reported by the *Mainichi* to have been held in Osaka on the 10th instant. After the election of a president and vice-president, a debate was started on problems connected with encouragement of the export of cotton yarns; the promotion of facilities of foreign exchange, and the entire abolition of the Trades Tax. The 1st and 3rd matters were set aside, the 2nd alone being taken up for final discussion. A suggestion previously made to the effect that the best means of arresting the decline of the spinning industry would be to suspend work for four weeks, was rejected. It was finally decided that a committee be appointed to urge the Government to afford special facilities for securing loans for spinning companies, especially in making remittances abroad, and that the committee should be empowered to open negotiations with the Specie Bank or the Bank of Japan in order to attain the above ends. It was further proposed that creditors should be requested to postpone collection of their promissory notes, now amounting to eight million yen, which have been issued by over fifty spinning companies.

Commenting upon the present condition of Korea, the *Tokyo Asahi* says that the alliance between Russia and France, in all matters dealing with the little Kingdom, has now become an accomplished fact. Russia has succeeded in securing supreme authority in the army and finance, while France is endeavouring to take charge of all industrial enterprises. It has been suggested to the Korean court that French experts should be engaged for the furtherance of technical education. This step became apparent when a report was made by the Commercial and Industrial Department to the Foreign Office to the following effect:—With a view to instructing the natives in various branches of industry, French experts should be engaged to teach carpentry, masonry, tile making, joinery, electric-lighting, and glass and porcelain making. Communications have already been opened with the French Minister and the amount of funds to be devoted to these undertakings, through a mutual understanding, has been estimated at 6,000 yen a year. Since the engagement of foreigners, however, has to be conducted through the Foreign Office alone, it is desired that application be formally made to the French Minister in Seoul for the purpose of securing the services of experts as soon as possible.

The Minister of Finance being anxious to comply with the wishes of the Commercial and Industrial Union, recently submitted, according to the *Chuo*, to the Nippon Ginko, the following three points for consideration:—

- (1).—Reduction of discount on all bills.
- (2).—Extension of the limits of goods receivable as security.
- (3).—Greater freedom in the matter of loans, suspension of arbitrary increases in the rates of interest.

It is, of course, within the competence of the Minister of Finance to negotiate with the Bank of Japan on the above three points, but to force them upon the Bank would be most preposterous; such an action would inevitably lead to all snapping of the relations now existing between the Bank and the Ministry. Yet the suggestions having been made by the Premier, the Bank of Japan is under obligation to present a reply to them. It seems that the Bank is diametrically opposed to the 1st and 2nd suggestions, the 3rd alone being acceptable. In fact, this is a course that the Nippon Ginko is very much disposed to adopt. But the greatest difficulty presents itself in the matter of the

Bank's pledging itself to refrain from raising the rates of interest whenever circumstances demand, inasmuch as a guarantee of such a nature would impair its dignity as the central bank of Japan.

The *Shogyo* states that the general meeting of an association "organised for the consummation of financial adjustment," which goes under the name of the *Zaisei Seiri Kisei Domei-kwai*, is to be held on the 7th instant at the Fujimiken restaurant. The proposed subjects of debate are:

- (1) Reduction by 20 per cent. (about 5 million yen) in the amount of ordinary military expenditure for the next ten years.
 - (2) Reduction in the same amount of the ordinary naval expenditure for ten years.
 - (3) Granting of an annual allowance towards the civil administration fund for Formosa for a term of years, in addition to the revenue now realizable.
 - (4) Reduction by half of the expenditure for the maintenance of gendarmes.
 - (5) Undertaking the Formosan railway as a government enterprise.
 - (6) Recourse to foreign loans in future with the consent of the Diet.
 - (7) Entrusting the telephone service to local corporations or private individuals.
- The following matters are to be introduced for special deliberation:—(1) Abolition of Laws for the inspection of silk; for the encouragement of direct export of silk; and of the deep sea fishing encouragement subsidies. (2) Recission of the Tobacco Monopoly Law and the levying of a tax on the area of plantations at a rate corresponding to the amount of import duties. (3) Abolition of the Agricultural and Commercial Banks. (4) Division of the construction expenses for the Shinyetsu railway in the form of shares, so that one half may be sold to the public and the other half held by the Government.

From the *Tokyo Asahi*, we gather that the Osaka harbour bonds were originally intended to be sold at 90 yen per 100 yen face value and to bear five per cent. interest, in order to attract foreign capital. While the scheme was still in progress, Mr. Utsumi, ex-Governor of Osaka, submitted the bonds to various banks in the city for subscription, and eventually the interest was raised to 6 per cent. Some of the members of the Municipal Council advocating the introduction of foreign capital now assert that as the reconstruction of the harbour is not undertaken solely for the advantage of Osaka's inhabitants, but more as a State enterprise, the scheme adopted for raising the loan was far from satisfactory. They are consequently exerting their energies towards getting the plan restored to its original shape. A domestic loan places the term of redemption at seventy-seven years, but with foreign capital amounting to 16,820,000 yen, which could be obtained at once, the works might all be paid for in forty yearly installments. Thus there is a difference of thirty-seven years between the two schemes. Moreover, the foreign capital thus acquired being at five per cent. interest, a surplus of 3,483,172 yen would be saved in interest. Other advantages resulting from the shortening of the period of repaying the loan would be secured by reductions in the municipal taxes, amounting to 7,360,438 yen (appropriation of future profits realizable after the 30th year) and in rents of land aggregating 6,660,000 yen, and also in the amount of fees for piers and wharves, which would amount to no less than 6,077,250 yen, these figures together constituting a total of 20,097,688 yen. Even subtracting from this amount a sum of 3,700,000 yen as maintenance expenditure for 37 years, the enormous saving of 16,797,688 yen is possible.

The price of rice has never been so high since the Restoration, as it is at present. The decrease in stocks at the Fukagawa granaries is quite unprecedented, the figures for October aggregating only 90,000 bags. Under these circumstances the average quotations per *koku* have risen to 14.53 yen. Last month, arrivals from Iae, where the crop was eminently successful, continued to come in freely, while new rice from Kiushiu, together with imported grain, swelled the

stock in Fukagawa to 180,000 or 190,000 bags. Subsequently, big importations of rice from abroad led to a slight falling-off in prices. The appreciation of commodities has also led to a rise in freights. The rate between Tokyo and Yokkaichi, which used to be 33 yen per 100 *roku*, has been raised to 38 yen, and that between Tokyo and Kumamoto to 80 yen instead of 66 yen as heretofore; warehousing fees have increased about 20 per cent. Below is a table showing average quotations and stocks for the past five years:—

Year.	Stock. Bags.	Average price. Yen.
1892	363,330	7.24
1893	667,088	7.98
1894	740,896	8.31
1895	789,293	9.15
1896	753,407	10.60
Dec. 14th, 1897 ..	189,450	13.76

The total imports of rice for the same periods were as follow:—1892, 2,201,546 bags; 1893, 3,309,425 bags; 1894, 2,723,505 bags; 1895, 2,433,834 bags; 1896, 2,336,670 bags; 1897, 2,723,505 bags. Imports up to November this year totalled 1,965,500 bags, which, together with domestic rice, constitute an aggregate total of 300,000 bags.

It is stated that gold dust has been found on the upper stream of the Ishikari River, Hokkaido, and some forty workmen are at present engaged in seeking the precious metal. It is added that the quality of the gold is excellent and some nuggets weighing 7 *momme* and 5 *momme* have been found.

Investigations completed by the Finance Department show that the rates of interest on loans throughout the empire from July to September this year have risen considerably. At present there are sixty principal localities where banking business is carried on, but the highest rates of interest are paid in Miyasaki, Niigata, and Gifu. Kanazawa is reported to show 15.3 per cent, and is followed by Saisho, Akashi, and Izushi, where the rate is fixed at over 15 per cent. Yawata ranks next, with 14.4 per cent. The minimum scale of interest is noticeable in Kagawa, Oita, and Okinawa. Takamatsu and Sayeki are represented to show 7 per cent. only, while Okinawa comes next with 8 per cent. maximum to 7.3 per cent. minimum. The following comparative table shows the average rate of interest for this year and last:—

	30th year. per cent.	29th year. per cent.	30th year. per cent.	29th year. per cent.
July	13.3	12.6	9.8	9.2
August	13.3	12.8	10.	9.4
September	13.3	13	10.	9.6

The highest rate of interest on deposits was paid in Toyama, being 7.5 per cent. Next come Kumamoto, Kiriu, Mito, Tatbayashi, and Kashiwada, where the scale was from 6.6 per cent to 7 per cent. Nagaoka and Shizuoka indicate the lowest, namely at 3 per cent, while Yawata and Tsurooka occupy the second position with 3.5 per cent, and are followed by Saga and Ushitsu with a slightly higher rate. Other districts varied from 6.4 per cent. to 4 per cent. Interest on deposits this year may be compared with the corresponding period of last year as follows:—

	At minimum average. 30th year. per cent.	29th year. per cent.	Maximum average. 30th year. per cent.	29th year. per cent.
July	6.2	5.9	4.5	4.1
August	6.3	5.9	4.6	4.2
September	6.3	6.	4.7	4.2

With regard to the daily rate of discount, it may be mentioned that the highest rate is noticeable in Nabeoka, 5.4 *sen*. Tsuruoka, Akita, and Sayeki rank next with 5 *sen*, the maximum rate being at Yawata, at 2 *sen*. In other localities the maximum was represented at 4.5 *sen* and the minimum at 2.4 *sen*.

The comparative figures for the two years are:—

	30th year. per cent.	29th year. per cent.	30th year. per cent.	29th year. per cent.
July	39.9	34.5	28.8	27.8
August	37.4	34.9	29.8	27.7
September ..	37.8	35.9	30.	28.6

THE MERCHANTS AND MANUFACTURERS.

The Merchants' and Manufacturers' Union and the Chambers of Commerce seem to be now co-operating in opposition to Count Matsukata. It does not appear that the Chambers of Commerce have taken up the project of a foreign loan. At a meeting of their representatives, as well as of the Union's representatives, held in the Imperial Hotel on the 9th instant, no reference was made to the loan by any of the speakers, so far as we can discover. Mr. Watanabe—at one time President of the Imperial University and afterwards Governor of Tokyo—who occupied the chair at the meeting, spoke only of increasing the securities held by the Bank of Japan and raising the limit for the issue of notes.

CHINESE NOTES.

On the night of Nov. 30th, burglars broke into the house of Baron von Reitzenstein at Woosung, and stole a quantity of cutlery, plate and other objects. They also helped themselves freely to wine. Several sentries are said to have been on duty in the immediate neighbourhood of the house, but they did not observe anything irregular.

General Yeh, who distinguished himself by incapacity at Ping-yang, and who has ever since been lying incarcerated under sentence of death, is likely to be pardoned. It is said, a clever memorialist having managed to shift the blame to the shoulders of two dead men, General Wei who was beheaded for cowardice, and General Tso, who died on the field. It is thought that Yeh will be sent to Kiaochow to relieve Chang, who has been summoned to Peking to account for his conduct in "suffering" the Germans.

"The native papers," we read in a Shanghai contemporary, "state that Mr. Huang, the Shanghai Magistrate, has lately received a telegram from the Viceroy at Nanking commanding that special care be taken to prevent any riots against missionaries. 'The Germans,' further says the dispatch, 'have seized the pretext offered by the recent murder by bandits of two German priests in Shantung to hold Kiaochow, and it is important that no further pretexts be given to any foreign Power to be taken advantage of.'"

Another piratical outrage in southern China is thus described:—

Just as the steamer *Humán*, of the Canton-Shanghai Steam Launch Company, was preparing to leave the Canton jetty the other day with a full complement of passengers, the inland mail and some treasure, she was boarded by several men attired in soldiers' uniform, who declared that they had received orders to search for some contraband that had been reported at the Likin Bureau. While the skipper of the launch was showing the pseudo-soldiers over the boat, one of them gave a shrill whistle, whereupon a dozen men who had already come on board in the guise of passengers jumped out of the fore and aft cabins, revolvers in hand and guarded the entrances on either side. At the same time the skipper was knocked down and three others, who apparently knew all about a steam-launch engine, fled into the engine-room and captured the engineer and stokers on watch. All the ship's crew were ordered into the hold and the hatch closed upon them while the passengers were ordered to lie down and keep quiet on pain of being chopped to pieces. Then the leader gave the signal and the launch was unmoored and began to leave the jetty regardless of the hails from several passenger boats that had paid towage money to be towed to various cities en route to Shuntsh. It then became known that the *Humán* had been boarded by pirates, and although there were three or four other steam-launches with steam up ready to start for other inland cities not a single one dared to provoke the vengeance of the pirates by making an attempt to stop them. The captured steamer made for Shuntsh, but just as she was entering the boundary line of that district she was met by a police patrol-launch which belonged to the West River police flotilla. The latter signalled to the pirates the usual question:—"Have you seen any

pirates on the way?" but the pirates pretended not to see the signals which roused the suspicions of those on the police steam-launch. A blank shot was therefore fired across the pirates' bows, whereupon they suddenly swerved round and made for a creek in the neighbourhood of Leliu village. The pirates then ran their launch ashore and before the police could prevent them carried off all their booty, amounting to \$8,200 in gold and silver, and over \$2,000 from the persons and luggage of the passengers. The police managed to capture one of the pirates and he and the passengers were then taken back to Canton. No lives were lost in the affair.

Mr. Arch. Little, in his essay "The Northern Alps," which has just been brought to a conclusion in the *N.-C. Daily News*, says:—

About half-way between Sungp'an and the prefectural city of Lungên, near a small picturesque village called Siao-hoying (small river or side-stream camp) I noticed all at once a thick yellow muddy stream, which I had to ford on my pony, take the place of the pellucid bu-ns and the journey all round from Kuansien and over the pass. This I at once saw must come from gold washing, and on looking round, I distinctly traced a vein of white quartz rock in the dark shales though which the stream has here cut out a deep gorge—and which vein, with several others seen later on, the river has equally cut through. I followed up the side stream and about 300 feet above, where the slippery shale path ascends the shifting precipitous slope of the main river bank, I found a dozen Chinese engaged in quartz mining. They were pounding the quartz with a pestle and mortar; the mortar of stone and pestle of wood iron-shod; the mortar some 3 feet in diameter, the heavy pestle worked by four men. They said they gained each 100 to 200 cash per day on the average but sometimes a lucky day gave them 1,000 or 2,000! There is a rich field undeveloped. From what I have seen hereabouts and, in fact, all along the Tibetan border right round from Sungp'an to Tachienlu, auriferous quartz is present in great quantities. And its development may enable China ere long to follow Japan in introducing a gold currency, thus assimilating herself to the rest of the civilized world, and putting an end to the terrible vagaries in exchange which, of late years, have made life in China, to the business man, anything but a path of roses. But so far the Chinese officials in this province at least are extremely jealous of any foreign help in developing their industries and we may have long to wait before Szechuan emerges from its present state of poverty and opium drunkenness.

NEWS OF THE WEEK.

The building for the Yokohama Merchandise Museum near the Cricket ground, Yokohama, is now completed and the Museum will be opened for public inspection in the course of January.

Lot No. 12-A, Bluff, comprising 626 *tsubo* of land and one 5-roomed dwelling house, was sold at auction by Messrs. Eytou and Pratt on Wednesday afternoon, being knocked down to Mr. Apar, on behalf of a client, for \$6,600.

The sailors of the *Boston*, *Grasmatchy*, and *Rainbow*, the American, Russian and British cruisers at Chemulpo, had a boat race recently in front of Roze Island. The result was that the Americans won all of the three races, with the Britishers second, and the Russians third.

The *Chung Ngai San Po* contains a paragraph stating that it is reported that Liu Yang-fu, the ex Black Flag Chief has, through the petition of H.E. Chang Chih-tung, been promoted to be Generalissimo of the armies of the five provinces of Nam Yeung, namely, Kwantung, Fokien, Chekiang, Kiangsu, and Hunan.

Our Nagasaki contemporary, writing on Dec. 7th, said:—"The last brick was laid on the walls of the Nagasaki Hotel at noon yesterday. The roof is, we understand, ready for fixing, and will, it is hoped, be finished by the end of the year. Even in its present unfinished state, the building presents quite an imposing appearance on the bund."

The bicycle-tax in Osaka for next year, says the *Hiogo News*, has been fixed at 3.50 yen, a rise of a dollar on this year. There are other public charges incidental to bicycle-riding that will raise the cost to nearly 10 yen. The number of riders nevertheless rose from 50 at the beginning of 1897 to 211 in August. Regulations are being drafted and penalties will be enforced for any breach thereof.

On the 13th inst. two Japanese coolies working in the hold of the P. & O. steamer *Rosetta* in Yokohama harbour, were struck

by some falling cargo, which slipped out of the slings, and received fatal injuries on the head and back. One of the men, named Ogawa, died soon after being conveyed to the Juzen Hospital and the other is not expected to recover.

That hardy annual, the winter *dorobo*, is again abroad in the land and it behooves residents to attend well to the fastenings of their windows and doors. On Sunday, a house on the Bluff was entered, but fortunately the thief was disturbed before he could lay hands on anything. The evening before, another Bluff house was prospected, but with similar results, owing to the vigilance of the dogs.

The *Chinese Mail* announces that a rich coal mine is said to have been found at Lin-chow (South of Kwangtung province). A party of officials have been despatched by the Viceroy of Canton, in the gunboat *Anlan*, to inspect the mine. The discovery, says the *China Mail*, if properly followed up in a sensible manner, should prove to be of great value at the present juncture, when Japan is said to be limiting its export of coal in view of wariike contingencies. We (*Japan Mail*) were not aware of any such action on Japan's part.

The *Malay Mail* mentions that in one mining district in Selangor where there are ten or twelve thousand miners at work, a block of tin ore is on view weighing, it is said, ten piculs, or over half a ton. The miners consider that it would be unlucky to break such a huge block, and so long as the men are kept working, they will retain this splendid specimen, which is being worshipped as a joss. "Tin joss" seems rather a familiar phrase, remarks the *Hongkong Telegraph*. In Hongkong we only worship such things in the abstract.

The condition of the beach running along the bottom of the Bluff from the British Naval Hospital to the Niche, is perfectly disgraceful. It seems to have become the dumping ground of all the refuse of the harbour. On Wednesday the stench arising from the foul matters there accumulated was very appalling. No fewer than sixteen dead dogs, several cats, and innumerable ducks, chickens, and other fowl were rotting just above highwater mark. Surely the Kencho, from a sanitary point of view alone, ought to prevent, or remedy, such a state of affairs.

In H.B.M.'s Court, on Wednesday, before Mr. James Troup, Assistant Judge, Albert William Hilson was charged by the master, William Daniel Cameron, with refusal of duty, on the 11th and 13th inst., on board the steamer *Amarapoora*. It was added in the charge that the accused also behaved in an insubordinate manner. Accused, who is a fireman, pleaded not guilty to both charges. Evidence was given by Patrick Flannigan, chief, and Johannes Carsten, second engineers of the steamer, and accused was convicted on both charges and sentenced to three weeks' imprisonment, or for such shorter period as the steamer remains in port; to forfeit two days' pay and pay the costs of the Court.

According to the *N.-C. Daily News*, a decree dated the 15th of October has been promulgated to all the Viceroys and Governors of provinces consenting to the proposals of Yang Yi-chih, a Cantonese and a member of the Transmission Office, recommending the minting of gold coins in order to prevent the drain of gold that is now going on from the country. The high authorities of the territories where gold is produced are therefore commanded to send at once a note of the annual output of their territories, while the other Governors are exhorted to send explorers over the empire to prospect for the precious metal and report at once to Peking if they find any. The intention is to buy up the gold in the country that is now being sold to foreigners.

After being practically dormant for seven years past, says the *Hogo News*, the Kobe Chapter of Rose Croix, No. 1, was revived on

Monday night, and the Antient rite appears to have a new and prosperous era of working before it in that place. Most Wor. Bro. O. Keil, Commander of the Consistory of Japan, was present, and duly installed the Officers elected for the coming year. They were as follow:—E. H. Hunter, W.M.; G. H. Why-mark, S.W.; L. D. Abraham, J.W., P. M. Skinner, Orator; Dr. Thornicraft, Almoner & Treasurer; F. J. Bardens, Secretary; A. Drewell, M.C.; W. Kerr, Expert; A. Kirby, Ast. Expert; Bros. C. W. Dimock and R. Home Cook were also present, and the proceedings were of a pleasant and successful character.

The *Kobe Chronicle* says:—The house of Yamamoto Toshihiko (formerly an employé of a foreign firm), one of the prisoners arrested in connection with the Custom-house scandal, has been searched by the authorities, and the *Yushin Nippo* states that Yamamoto's father at first denied having received any money from his son. On search being made, however, the man confessed to having received 25 yen which he produced from the pocket of his *kimono*. Subsequently he produced a bank book showing deposits for 350 yen, and also five 100-yen notes. He was then arrested. A clerk in the Financial Department at Tokyo, but formerly in the Kobe Custom-house, has been arrested on a charge of complicity in the frauds, and will be brought down to Kobe for trial.

In his Hongkong share report of Dec. 4, Mr. Erich George writes:—The extreme tightness of our money market has brought business in shares almost to a complete standstill, and I am very much afraid that no improvement will take place until after Chinese New Year. The November settlements, which have been small, seem to have been arranged satisfactorily, although some forced settlement sales in Bank shares and Dock shares have taken place, at rates which have not been made public. The market closes very dull, with hardly any inquiry at all, and it is most difficult to find buyers, except for a few stocks, and rates show signs of weakening further.

In connection with the approaching completion of the Siberian Railway, the *Jewish Chronicle* points out a matter which, sooner or later, the Russian authorities will be compelled to face. It has been found that there is a dearth of young and capable engineers for the exploitation of Siberia, and our contemporary suggests that this difficulty could be overcome by the Government either removing or modifying the disability which deprives Jews of the right of domicile in that region. It ought the more readily to do this since it objects to the employment of foreigners in Siberia. But another potent reason why the Jews should be given a chance is in view of the fact that when, last year, it was found impossible to fill all the vacancies in the Imperial Institute of Engineering at St. Petersburg, 40 Jewish candidates offered themselves, and were at once admitted.

In view of the contradictory reports that come to hand, says the *Daily Press* it is difficult to arrive at the exact position of affairs in Luzon, but that the rebellion is still active is evident from the fact that in a decree issued the other day a line is laid down marking off the districts in revolt. This line it is forbidden to cross without special permission, and persons doing so are to be tried by summary court martial as traitors or spies. The latest papers received also contain an account of an affair in which the Spaniards in dislodging a party of rebels from a strong position on Mount Arayat lost twenty killed and forty-six wounded. Of the rebels ninety-four were left dead on the field and their total losses are supposed to have been much heavier.

Mr. George Jamieson, says the *North China Daily News*, returns very shortly to Shanghai to be Consul-General and Commercial Attaché. This appears to be an attempt by the Foreign Office to carry out the wishes of the China Association, but is really an evasion. What is wanted is an official who can give his whole

time to travelling about and studying commercial questions, with headquarters at Peking; whereas it is a physical impossibility that the Consul-General at Shanghai can properly perform the duties of Commercial Attaché. It is presumed that Sir Nicholas Hannen will remain Chief Judge until the new treaties come into force in Japan, when the British Court at Yokohama will be abolished, and Mr. H. S. Wilkinson will not improbably succeed Sir Nicholas as Chief Judge at Shanghai. But much may happen in the next two years.

What is a "trowser," asks a London contemporary. When used in the plural everyone knows the meaning of the word; but "trowser" in the singular—what is that? Yesterday we were ignorant ourselves, but to-day we are enlightened. A man charged at the Guild-hall with overworking a horse urged as an excuse:—"I don't understand nothin' about 'osses. I'm on'y a trowser in the Whitechapel-road." To which the magistrate: "What is a trowser?" Answer: "Vy, a man as does any hodd jobs. Anythin'."

The immense success of the "soda-water Juju" which was pardonably employed to awe the Niger savages with its popping cork, suggests to the *Globe* that the British are too neglectful of the resources of our civilisation. A balloon, a phonograph, a magic lantern, a few firework set-pieces, and an X ray apparatus would constitute a diplomatic outfit by whose aid the "Man who would be King" might make himself Emperor of all Ungrabbed Africa. The Zulus were similarly terrified by the bagpipes of a Highland Piper, whom they described as a gigantic woman leading a regiment of females, with the white man's god under her arm, and every time she pinched the god he squealed for the black man's blood.

The following paragraph is taken from the *Cooktown Independent*:—There are sixty or seventy pearling boats at Thursday Island owned by Japanese, and each, at a low estimate, is clearing about £200 per annum, which very easily supports a white family, so that it may be safely said the Japanese are supplanting sixty or seventy white families. If Clark and Co. rented all their boats to the Japanese, they could, without much risk, clear about £15,000 per annum, but instead of allowing the industry to pass entirely into the hands of the Japanese they prefer to work the boats themselves. It is proposed that the Government be asked to purchase all the boats owned by Japanese and re-sell them to Europeans, making it illegal for Asiatic aliens to rent or own boats, and that Japanese engaged as servants under contract with pearl-shellers be returned to their country on the expiration of their term of service.

Professor Newman's long and active life will be claimed as a triumph by the vegetarians, teetotallers, and anti-tobaccoists. After middle age he gave up meat and alcohol and he did not smoke. He lived to be ninety-two and was writing learned books till within a couple of years or so of his death. On the other hand, the bibbers of wine and the smokers of pipes may take comfort from Lord Tennyson. The poet lived to be eighty-three, and he kept his intellectual powers and his poetical faculties absolutely undimmed to the close. And Tennyson was assuredly no ascetic. He tried vegetarianism once to oblige Edward Fitzgerald and gave it up after a few weeks. He liked his pint of port, and smoked steadily and persistently. Indeed, he was quite unhappy if he were asked to stay in a house where he was not allowed his pipe at all times. But longevity and vigour in old age have probably much more to do with a man's inherited constitution than his habits. Tennyson was one of a family of twelve, nearly all of whom lived to be over seventy. As poor Emily Tennyson, the betrothed of Arthur Hallam, said, "The Tennysons don't die."

The *Edgar*, cruiser, Captain G. F. King-Hall, was taken from Plymouth Sound into the Channel on 29th October for a commissioning trial, which was unsatisfactory, the feed pipes of

the boilers being found defective. On 3rd November she went out for another three hours' steam trial, which proved satisfactory. The average speed was rather over 19 knots an hour. On return to port she hoisted the flag of Rear-Admiral C. P. FitzGerald, as second in command of the China Station. After having had a slight defect made good she left for the China on 4th November, taking out Admiral FitzGerald to the *Grafton* and relief crews for the *Archer*, *Linnæ*, and *Peacock*. Lieutenant W. Bowden-Smith has been appointed flag-lieutenant to Rear-Admiral FitzGerald.

The following telegram, dated Bombay, Nov. 13, appears in Rangoon exchanges:—"The great rush for British dollars which imposed so heavy a strain upon the resources in men and machinery of the Bombay Mint, has dropped as suddenly as it arose, and the coin is now being made at little beyond the ordinary rate. The deficiency of silver coinage anticipated as a result of the establishment of a gold standard in Japan and the consequent withdrawal of the silver *yen* has been met, at least for the present, though it is quite possible the a rush may recur." There is still great scarcity of money in Hongkong, due, the *China Mail* believes, to the withdrawal of the *yen* before provision had been made for the substitution of other coins.

An Allahabad telegram dated Nov. 17th gives some idea of the severity of the fighting on the Indian frontier. It says that the total casualties in the operations (including the Maizar affair) from June 10th to Nov. 15th are as follows:—

	Killed.	Wounded.
Staff and Departmental Officers	2	6
Regimental Officers	27	60
British Rank and File	59	240
Native Officers	6	30
Native Rank and File	236	658
Followers	9	22
Total	309	1,016
Grand Total	—	1,355

The casualties among British officers have been in British regiments:—9 officers killed and 30 wounded, while in Native regiments the figures are 18 killed and 30 wounded.

A very neat portable telephone for hospitals or private use has been brought out by the London and Provincial Telephone Company. It enables a sick patient to communicate with other residents in the house with a minimum of trouble, more easily, indeed, than with a speaking tube. The advantages of such a means of conversing with patients, especially isolated patients, suffering from infectious diseases, are patent. The apparatus would also be an acquisition in many private houses, if only for this reason, but, of course, it is capable of serving the ordinary needs of a household. Being portable, it can be moved from one room to another. The same inventor has also introduced a small "button" telephone, which can be attached to the wall like an electric bell push. It serves as an electric bell, in fact, but also allows of conversation between the two parties concerned, which a mere electric bell cannot do.

We regret to have to record the death of Mr. H. S. Adams, of the firm of Messrs. Dodwell, Carlill, & Co., which occurred on Thursday morning at the General Hospital. It is less than a fortnight since the deceased had to enter the hospital, having developed symptoms of typhoid fever. Until the last two or three days it appeared to his medical attendants that he would pull through the attack, but the treacherous disease took a turn for the worse on Tuesday and Wednesday and working on a by no means strong constitution, terminated fatally on Thursday morning. Deceased was only 29 years of age and had but recently renewed his engagement with Messrs. Dodwell, Carlill & Co., in whose employ he had been for about four years, as a valued and esteemed assistant. In social circles, and particularly in the Amateur Rowing Club he will be greatly missed, as his

genial temperament rendered him a general favourite with his associates, who were many. We understand he leaves a widowed mother in England, who was expecting him home in a few months on six months' leave of absence, and for whom much sympathy will be felt in her bereavement. The funeral takes place from Christ Church at 4 o'clock this afternoon.

What is the correct pronunciation of Macdonnell, asked the *Daily Press* of December 7th. The word was wrestled with by the Judge and members of the Hongkong Bar towards the end of the day's proceedings in the Belillos case. Mr. Danby pronounced the word Macdonnell. His Lordship expressed a doubt as to whether there were two n's in the word and then asked if the correct pronunciation was not Macdonnell. Mr. Pollock believed it was usually pronounced that way. Then Mr. Francis, with considerable emphasis, remarked:—"It's Macdonnell. There was a Governor here of that name and he always called himself Macdonnell. Then a Colonel of Artillery came here and he called himself Macdonnell, but he was of French descent." If we possessed an institution similar to L'Academie Francaise difficulties of this sort would be entirely removed. For ourselves, we prefer the accent on the "don," but we should decline to argue with anybody who thought "nell" should be accented.

A correspondent in a home paper says:—A discussion, brought about by the publication of the nationalities of the men of the 1st Battalion Gordon Highlanders who were killed or wounded in the storming of the Dargai heights, is going on in the columns of the *Morning Post* on the purity of the Highland regiments. I can supplement the discussion by some interesting information, and I will take the old 92nd Highlanders as a typical case. When the regiment was raised in 1794, about three-fourths were Highlanders from the Gordon and other estates in the Highlands, and the other fourth came from the lowlands of Aberdeen and the adjacent counties. There were also 31 Irishmen and one Welshman in the regiment, and it appears that there have always been some 60 to 100 Irishmen in the ranks ever since. Of the men enlisted between 1811 and 1825, 716 were Scotsmen (not necessarily Highlanders), 51 English, and 111 Irish. At the commencement of the year 1854 the regiment consisted of 885 Scotsmen, 5 Englishmen, 10 Irishmen, and 1 foreigner. Three years later, including the depot, the regiment contained 1,043 Scots, 7 English, and 40 Irish. In 1861 it consisted of 750 Scots, 70 English, and 108 Irish, while of its officers 23 were Scots, and 22 English and Irish. The 42nd, 71st, 72nd, 79th, 92nd, and 93rd composed the Highland Division in the Crimea, and at the end of hostilities, before returning to this country, they stood thus, including the depots:—6,104 Scots, 361 English, 371 Irish, and 2 foreigners. The purest national regiment at this moment from the territorial point of view, is undoubtedly the Black Watch, which had, according to the latest returns, no fewer than 803 men serving in the regiment who were born in the regimental district. The Gordon Highlanders had 482.

The question of the relative cost of new ships built in France and those of British build has had some interesting and trustworthy light thrown upon it recently by letters which have appeared in a French journal from, amongst others, Messrs. Bordes and Sons, the extensive shipowners of Bordeaux and Paris, well known by and up till within recent years very good patrons of Clyde builders. Commenting on the decline of shipbuilding in France, a writer in a recent issue of the *Economiste Francais* gave as a reason that French builders would not undertake to produce a ship in less than two and a-half years, or for anything less than practically double what a similar vessel would cost in Britain. The article, and especially this part of it, provoked a reply from M. de Cabiol, director of the Chantiers de la Loire Company at St. Nazaire, in which he sought to refute the state-

ment, and declared that his company had just undertaken to build two cargo vessels, and deliver them, one in fourteen and the other in sixteen months, at prices not exceeding 30 per cent. more than English prices. His company was not refusing orders, but, on the contrary, was inviting them, as its yard was not sufficiently employed. The writer added that if more ships were not built in France the fault did not lie with the builders. This has elicited a rejoinder, not from the first writer, but from Messrs. Bordes and Sons, who declare that during the last four years they have had built in France eleven steel vessels measuring 33,000 tons, five of which vessels were built by the Chantiers de la Loire Company. The price that had been asked by British builders for each of these vessels was 630,000*fr.*, whereas the lowest they could get them built for in France was 850,000*fr.*, a difference of 35 per cent. In 1896 Messrs. Bordes offered the Chantiers de la Loire Company an order for two additional ships, but, instead of 850,000*fr.*, the price demanded per ship was 1,150,000*fr.*, or 82 per cent. above the British price. Under these circumstances, of course, Messrs. Bordes were compelled to abandon the idea of building the ships in France, and to purchase them in England. The shipowners of France, Messrs. Bordes say, are ready to admit that the bounties allowed enable them to pay 25 per cent. more for ships built in France than for those constructed abroad, and if they could obtain all the vessels required at these rates, they would certainly not think of joining the agitation for a re-establishment of the half-navigation bounty on foreign built ships. From the experience of Messrs. Bordes with the St. Nazaire Company, in seeing its price for a given size and class of ship jump from 35 to 82 per cent. more than the British price, it would seem as if French builders, having no fear of foreign rivalry under such secure and happy conditions as the bounty system confers, make their charges accordingly.—*Engineer*.

CORRESPONDENCE.

THE CONCERT AT THE CENTRAL TABERNACLE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Perhaps more than enough space has already been occupied in your columns on the above subject, but as the one chiefly responsible for the foreign music on the programme, and in part the Japanese, I should be much obliged if you would allow me to say a few words to your readers.

Since the beginning of my connection with the Central Tabernacle, I do not know that there has been any public meeting held there which has made me feel so badly as what occurred on the night of our recent concert. The building was crowded upstairs and down, and throughout the first part of the programme the audience was most attentive, orderly, and appreciative, and everything seemed to be going well. I was congratulating myself upon the success of our enterprise, when, to my chagrin, signs of unrest began to appear among the students in the galleries, at the announcement that the player on the *Satsuma biwa* was late. The chairman assured them that the man had definitely engaged to be present, and had sent no message to the contrary; and as he had not yet arrived, a telegram had been sent him, also a messenger to hurry him up. The "boys" seemed in no mood to accept apologies, but as the other performers ascended the platform, persisted in muttering words of dissent that the man they had come on purpose to hear had not put in an appearance, some threatening to demand back the price of their tickets. These expressions of dissatisfaction were becoming rather distracting to the respectable portion of the audience by the time it came to the Rev. T. McNair's turn to give his auto-harp solo, and continued with each successive piece, until finally it was announced that the tardy *biwa* man had at length arrived. At this the enthusiasm of the students seemed to know no bounds, cries of "No, no," being heard when the chairman said that the Army Band would play, and then the *biwa*. We have had the *Satsuma biwa* at other concerts, and there has always been hearty applause from the student portion of the audience, but I never knew the excitement to reach such a pitch as it did the

other night. They seemed to go fairly wild. A number of foreign guests, who seemed quite unaccustomed to seeing excited Japanese audiences, became quite alarmed, especially as they watched the all but frantic gesticulations of a young fellow who sat on the front row of chairs, and who had evidently been drinking enough *sake* to make him susceptible to whatever enchantment there was in the *biwa* player's performance, his veins standing out like whip cords, and tears rolling down his cheeks, until he finally rose and went to the front of the platform and bowed low before the man who had, so charmed him, the students all the while giving most hysterical yelps at every happy turn in the song, to give vent to the emotion that thrilled them, and, some one afterwards told me, to encourage the player. At this, most of the foreigners present rose and left the building, some actually trembling with fear. The excitement did not subside till the man was done; and most of those who stayed to hear him to the end seemed to think that they had such a *gachiso* that they could not even wait to hear the beautiful selection from the Band with which the concert closed.

Now while the disorderliness of the students cannot be too severely censured, I fear that some of our foreign friends were under a misapprehension as to the exact meaning of what was going on. For example, hissing was heard while Mr. MacNair was playing, and some seemed to have thought it was directed against him; whereas I have never known it to have any other meaning with a Japanese audience than an effort on the part of the quiet portion to silence the disturbance of others. Then, the discourtesy shown by the students was by no means confined to the foreign *artists*, but was equally manifest towards the Japanese musicians who came on in the place of the man whose name on the programme was, they said, their only reason for attending the concert. Again, while the students were most barbarously boisterous, there certainly was not the slightest danger of anything happening to give good ground for fear. But though these things are so, the rudeness shown by the students in affronting the management and the performers in revenge for the inexcusable lateness of the *biwa* player, can find no manner of justification. I am assured by Japanese friends that those thus guilty were not students of reputable institutions. It is to be hoped so; for surely nothing can damage Japan's good name more than such relics of barbarism. I was so ashamed and mortified as I came home that night, that I almost felt as if I could never have the heart or the face to ask a foreign friend to assist in a Tabernacle concert again; nor do I blame those kind friends who came all the way to Hongo that evening, and waited till a late hour to help us, but felt they could not play before such an audience. I sincerely hope that nothing of the kind will ever happen again. I have made up my mind that as long as I have anything to do with the Central Tabernacle, I shall do my best to prevent the recurrence of a like scene; and I feel that, whatever may be its merits, to have no more *Satsuma biwa* is the first step in that direction.

Thanking you in anticipation for kindly inserting this letter,

I am, dear sir, yours faithfully,

HARPER H. COATES.

Hongo, Tokyo, Dec. 8th, 1897.

(We do not see why the *Satsuma biwa* should be tabooed. Could it not be put at the end of the programme? It seems a pity to banish an instrument which is a general favorite with the students merely because a few were noisy on a particular occasion.—Ed., J.M.)

THE SENDAI ROBBERY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—That was certainly an extraordinary story that you gave to the public in the *Japan Weekly Mail* of the 4th inst., concerning the Rev. Mr. Hoy, of Sendai. I am sure that all of your readers will agree that the strictures on his course at the close of the article are quite justified by the circumstances, and very moderately expressed.

But what interests me most, as a missionary, is the question as to how the affairs of the German Reformed Mission are managed, that it was possible for such a sum of money to be missing so long a time without detection. It seems to me that the public has a right to know something about that, for the missions here are the administrators of considerable sums of money, given by benevolent persons at home. It would be most unfortunate if the impression should become prevalent that mission affairs are managed in the loose way that seems to have been the case in Sendai.

How was it possible for Mr. Hoy to conceal the loss so long? Evidently it was not possible to do so in the face of a careful examination of the books,

for it had to come out when he handed them over to his successor in office. Had there been then no careful examination all these years? It would seem so. But where was the auditing committee? Is not some explanation from that mission in order? One can have some admiration for the man who, however mistakenly, undertook to bear such a burden himself, and whose tongue is so well bridled. But there is no room for admiration of the mission whose slipshod methods made it possible.

Being a mission treasurer myself, I feel anxious that the general public shall not draw the natural inference as to the way in which the accounts of missions are kept and scrutinized. In our mission such an occurrence would be utterly impossible, and so, I am persuaded, it would be in almost every other.

Very sincerely yours,

ICHABOD QUILL.

December 8th, 1897.

REMEMBER THE ORPHANS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There are three special reasons why exceptionally generous gifts may well be sent at this Christmas season to the Okayama Orphan Asylum. First, because they still have large unpaid rice and medicine bills resulting mainly from the severe epidemic (*sakiri-byō*) that visited them in the early fall. Six tiny graves, twenty-five children at one time confined to the hospital, and the temporary prostration of many of their industries give a hint of the severity of the ordeal (a baptism of fire Mr. Ishii calls it), through which they have been called to pass. Second, as a thank-offering for the successful completion of ten years of useful service to society. In these days of rapid change and frequent failure, it speaks well for this Japanese institution that it has stood the strain of ten trying years of self-denying work. Third,—Not satisfied with past attainments the orphanage is planning for farther development particularly along the line of a more thorough, systematic training of the children entrusted to its care. A day school on a par with regular Government schools is to be opened shortly within the asylum that the children may give most of their time and strength between the ages of ten and fifteen to hard study. Mr. Ishii has faith to believe that the wisdom of the change will be apparent to the institution's friends, and that society at large will furnish the needed assistance. One good teacher has been secured already and the school will be opened in a few days. This is a decided step forward and merits the generous support of all who desire to see these wards of society made something more than mere machines for the lowest kinds of labour. It is pleasant to note in this connection that the *kenkuwai* (local assembly) of Okayama prefecture has recognized, albeit tardily, the great worth of the institution and voted it \$100 a year from the public charity funds. Now let this be supplemented by generous private gifts from both foreigners and Japanese that Mr. Ishii and his loyal supporters, freed from debt and furnished with a better outfit, may go forward in their truly Christian service for the needy children of this empire.

Yours, etc.,

J. H. PETTEE.

Okayama, Dec. 11, 1897.

YOKOHAMA GENERAL HOSPITAL.

On Monday afternoon from 4 till 5.30 the Yokohama General Hospital, as at present restored, renovated and enlarged, was thrown open to subscribers and visitors interested in the good work which has been going on there during the last twelve months or so, under the auspices of Dr. Munro. Only those who were acquainted with the ramshackle place which bore the name of General Hospital, and the very limited and, to say the least, unsatisfactory accommodation and attendance therein provided for the weary sufferer a year or so ago, could understand and appreciate in full the vast change that has been inaugurated in this most useful and necessary institution. The old building has been completely renovated, new Oregon pine floors having been laid over the old flooring, with a padding of felt between the two to deaden the sound of persons walking in their rooms; good ventilation has been secured by the construction of fanlights above each door, and many other sanitary provisions carried out, amongst others the lavatories on both first and second floors having been removed from the main building to small annexes, under a separate roof, but accessible to the hall of the wards by covered-in passages and doorway. In

addition to the renovation of the old building an annex has been built out from the rear of the main block, where a number of rooms and offices have been constructed absolutely essential to a really efficient hospital, such as the Yokohama General Hospital has now become. The new wing includes a dispensary, where, in a large glass covered case, all the medicines and drugs required are displayed and classified; a consulting office; operating room, with beautiful marble floor and operating table, with lavatory adjoining; a laboratory with a number of the latest scientific and surgical apparatus, and in an extension of the wing into the grounds at the rear three rooms, which were originally intended for the accommodation of the nursing staff, but which, owing to the exigencies of the occasion, being segregated from the rest of the building, have for a time been devoted to the treatment of cases of typhus and other semi-infectious diseases. Altogether, without counting these three rooms, there are eight first class rooms and six second class, all on the ground floor, with roomy glass enclosed verandahs on three sides: comfortable and sunny promenades and lounges for convalescents, each room on the ground floor opening on to one or other of the verandahs. On the upper floor there is a large third class ward, capable of easily accommodating twelve beds, though at present only ten are provided, and here the accommodation is also neat, wholesome and airy. There are also on this floor two rooms for segregated cases and other rooms which are occupied as dormitories by the nurses, who have given up their more comfortable quarters in the new wing to patients. The whole hospital is lit with electric light and electric bells are fitted in all the rooms and wards, and it is needless to say that everything about the place is in apple-pie order and as clean as a new pin. The kitchen accommodation at present is said to be not up to the culinary requirements of the institution, and is to be improved, the building in which this important work is carried on being detached, in the grounds, but it has sufficed so far to meet necessities. Another outbuilding contains the hydropathic arrangements of the hospital, which are believed to be equal to anything of their kind in the Far East.

While the building and fitting up of the General Hospital have been thus metamorphosed, Dr. Munro and his conditors have not forgotten that most important factor of hospital efficiency and comfort—attendance and nursing. The staff of the hospital now includes an efficient lady housekeeper, who superintends the arrangements of all the rooms and the cuisine, three well trained and experienced European nurses—delt handed, cheering and companionable—and two native assistants. Anyone who has had the fortune or misfortune to spend a few days or weeks in a hospital will understand the wide difference to a sick man between such administrations and the clumsy services of a native "boy." The back verandah of the hospital looks out upon a plot of land which used to be waste but which is now in course of transmutation into a garden, and by next summer will doubtless "blossom like the rose."

During the afternoon the hospital was visited by quite a number of ladies and gentlemen interested in the good work, who, after inspecting the wards and general arrangements under the guidance of Dr. Munro and the lady nurses, were entertained to tea, coffee, cakes and other refreshments on the back verandah and in one of the rooms. After this most of the visitors gathered on the verandah, where Mr. A. O. Gay, Chairman of the Hospital Committee, delivered a short address. He said, in part, to the ladies and gentlemen assembled:—

"You have been invited to-day to inspect the addition and improvements to the General Hospital. The alterations in the general wards and the addition of an annex were initiated by Dr. Munro, the cost of the former being partly defrayed by Dr. Mœre and the cost of the latter has been provided for by funds kindly given by subscribers. The subscriptions have amounted to yen 4,462.50, of which yen 3,376.74 has already been expended. There are dependencies for balances still due on the building and lighting, which will probably amount to another thousand yen. I take this opportunity of thanking Dr. Munro for his indefatigable efforts in bringing the hospital up to its present efficient condition; the thanks of all the subscribers are due to him and I have no doubt all present will join with me in this."—(Hear, hear.)

Dr. Munro thanked Mr. Gay for his kind remarks in connection with himself. With regard to the expenses of the upkeep of the hospital he considered that something ought to be done by the community. During the last year the expenses for nurses, steward, servants and lighting had alone amounted to 6,000

yen, without allowing anything for medicines and food, while the total income from patients only amounted to 7,000 yen. He was sure that Dr. Mécère had been out of pocket for several years past in conducting the hospital. He thought that in a community like that of Yokohama, far richer than a village or town at home of a similar population, something should be done to put such a necessary institution on a secure basis. At present they were always in difficulties to scrape together enough to pay expenses, and felt no security for the future. One thing he would mention was that there was no place in Yokohama for the treatment of such infectious diseases as typhus fever. Such cases could not be sent to the small-pox hospital, and were sometimes of a scarcely infectious character, but required to be kept separate from other patients. At present they had no accommodation for such cases, but had to make use for the purpose of the new wing built for the accommodation of the nurses. Still he looked forward to the time when the people of Yokohama would come forward and do what they should for such a necessary and useful institution. In conclusion the Doctor thanked Mr. Gay for his kind remarks and Dr. Mécère for his co-operation in the work accomplished.

Shortly afterwards the visitors departed, highly gratified with the vast changes and improvements which they had seen in the construction and administration of the hospital.

MOSQUITO YACHT CLUB.

The annual meeting of the Mosquito Yacht Club was held on Tuesday afternoon at Keil's Building. Mr. W. W. Campbell, the Commodore of the Club, presided and about a dozen members were present.

After the minutes of the last meeting had been read by Mr. F. J. Hall, the Chairman ran through the report and accounts, explaining and commenting briefly on each clause and item.

Mr. MURRAY proposed that the report and accounts as presented be adopted.

Mr. FRASER took exception to some of the phraseology, grammar, and spelling in the report, some of which might be printers' errors. He did not want to criticize—(Oh dear, no!)—but he thought these should be corrected, and moved an amendment to the effect that the clerical errors he pointed out be corrected before the report be adopted.

Mr. FRASER's amendment was seconded, but failed to pass, and Mr. Murray's motion, that the report and accounts be passed, was carried. The report was as follows:—

REPORT FOR 1897.

Your Committee have pleasure in presenting this, the Second Annual Report of the Mosquito Yacht Club.

They are glad to be able to state that the year has been again a very successful one; there has been a large increase in the roll of members, which now amounts to nearly 100 and keen interest has been taken in both Racing and Cruising.

The Temple at Tomioka was rented for the summer months on the same conditions as last year and the improvements made there in the way of articles of furniture, matting, steps to the beach, and moorings were much appreciated.

Good use was made of the *Aborigine* as well on week days for sailing and bathing as on Sundays for cruising; and it is with great regret that the Committee have to note the loss which the Club sustained when during the typhoon of the 9th September she went adrift and became a complete wreck upon the northern breakwater. As the matter was fully reported at the Extraordinary General Meeting called for the purpose on 20th September, it is unnecessary to refer to the matter in further detail.

Over yen 600.00 has been subscribed towards the building of a new boat, which has already been commenced and which it is hoped will be ready for use early in the Season.

Very good races were held during the season and many handsome cups presented, of which the following is a detailed list.

The "Nandeska Cup" won by the *Sodesuka*
The "F. H. Tanner Cup" won by the *Nandeska*
The "Sodeska Cup" won by the *Nandeska*
The "Balfour Flag" won by the *Sodesuka*

The "Diamond Jubilee Cup" was sailed for on the 20th of June and 24th July and was won by the *Nandeska* upon both occasions. Messrs. Bramhall and Middleton presented a very handsome cup called the "Abnunt Cup" which, after an exciting race, was won by the *Kodesu*. The single handed race was won by the *Alona* and the *Diamond Jubilee* Cup for small boats by the *Hotaru*.

The Yokohama Engine and Iron Works very kindly gave a valuable cup which was won by the *Kodesu*. Mr. F. J. Hall, presented the *Hotaru* Cup for small boats and this after a close race, was won by the *Sayonara*.

A handsome Ladies' Purse, very kindly collected and presented by Miss Wheeler, was won by *Nandeska*.

It has not been possible to further the scheme of a Club House in Yokohama, but very little inconvenience has been experienced thereby.

The only additions to the fleet this year were the *Kodesu* and the *Hotaru* (which, however, has left the port), but your Committee would like to see several new 17 or 18 raters for next year.

Owing to the difficulties which owners of boats so frequently have with their Sendoes, the committee decided

to issue (upon application) certificates of grade to each boat employed in Club boats and it is with great pleasure that they are able to report that the Chief of Police not only co-operated very willingly but went to the trouble of making a personal call upon the Commodore with reference to having these certificates registered at the Police Station.

On the 15th February a very successful Tea and Coffee concert under the auspices of the Mosquito Yacht Club was organized by Mr. F. Coghill Jackson, which resulted in a substantial addition to the funds of the Club.

On the 17th November 'The Passport' under the able management of Mr. W. G. Bayne was presented at the Public Hall by Amateurs, also in aid of the Club. The very sincere thanks of the members are due to both these gentlemen and to all who so kindly assisted to make both the concert and the theatricals the success which they most decidedly proved to be.

The funds of the Club, as will be seen by the annexed account, enabled your committee to pay off six debentures of the seven outstanding at date of last report; one of them has been very kindly presented to the fund for replacing the *Aborigine* by the holder of same (Mr. L. J. Healing).

With very sincere wishes for the future success of the Mosquito Yacht Club your Committee beg herewith to tender their resignation.

W. W. CAMPBELL,
Commodore.

J. McARTHUR.

F. J. HALL.

E. J. LISKAUD.

S. WARMING, Act. Hon. Treasurer.	Yen.
E. COULT.	Yen.

Examined with vouchers and found correct.	Yen.
Yokohama, 21st December, 1897.	Yen.

The CHAIRMAN said the next business was the election of officers. He very much regretted that he himself was leaving them. He had been ordered to Hongkong and must go. He should always however retain the deepest interest in the Club. He recommended them to stick together, sink all petty differences, and help the Committee on all occasions.	Yen.
---	------

The result of the balloting for officers was the election of Mr. Blad as Commodore; Mr. F. J. Hall as Vice-Commodore and Hon. Treasurer; Mr. Bent, Hon. Secretary; and Messrs. Murray and Keswick to the Committee.	Yen.
---	------

Some discussion ensued with regard to the new flag boat, Mr. Blad asking the retiring Commodore if work had been commenced on the boat, as he knew of a yacht which could be purchased for \$1,000 which he thought would fulfil all the requirements of the Club. The contract for building the boat ordered was 650 yen, but they all knew that that did not mean anything like what she would cost before being fit to take her place as flag boat.	Yen.
--	------

The CHAIRMAN said the contract for building the new boat had not yet been signed, but work had been commenced on the frames and keel. It was quite within the powers of the Committee to cancel the contract and to purchase a boat if they found one to suit.	Yen.
--	------

A vote of thanks to Mr. Campbell, the retiring Commodore, and to Mr. Keil for the use of the room for the meeting, brought the proceedings to a close.	Yen.
--	------

THE STABBING CASE ON THE "PORT CALDONIA."

VERDICT AND SENTENCE.

The trial of William Cuthbert, a seaman belonging to the British ship *Port Caledonia*, on the charge of killing and murdering Jules Jerrard, another seaman on the same vessel, adjourned from Thursday, was concluded on Saturday in H.B. M.'s Court for Japan, before Mr. Justice Wilkinson and a Jury. Mr. Litchfield, Crown Prosecutor, conducted the prosecution and Mr. Lowder appeared for the prisoner.

The Crown Prosecutor called the following evidence:—

Hans Wilhelm Jergen Daehle, examined—I am a German subject and second mate of the *Port Caledonia*. I was so in October last. I knew Jerrard, who is now dead, and William Cuthbert, the prisoner. On the afternoon of the 18th Oct., about 3 o'clock, I saw Cuthbert on deck near No. 2 hatch, between the forward house and the mainmast. No. 1 hatch is forward of the forward house containing the forecabin.

To the Court—The two canvas screens on deck were aft, in front of the cabin; on the after side of No. 2 hatch. There were two distinct screens, 15 or 20 feet apart.

Examination continued—I was standing on the port side of the ship when I first saw Cuthbert; he was coming towards me from the direction of the forecabin, on the starboard side. I noticed his face was bleeding. I went as far as midships to meet him. I asked him what was the matter with his face. He told me Jim had been hitting and kicking him without his fault. He said, "What's a man to do, how am I going to stand this?" I told him to go and wash himself and go about his business. There was blood and coal dust on his face. I left him then. I don't know which way he went then. I went forward. As I was going forward I heard an altercation going on, loud shouting, on deck. I went from starboard to port in the direction of the noise, to the forecabin door, port side. When I got to the forecabin I saw Jim abreast the forecabin door, on deck. He was facing the door. Cuthbert was inside the fore-

castle, just in the act of coming out. I saw no one else in the fore-castle. I saw the mate and I think Olsen outside. When I saw Cuthbert in the fore-castle he had a hammer and a slice in his hands. The hammer was in his right hand, raised, and the slice in his left. His foot was raised to get over the combing. The slice and hammer produced are like those I saw in Cuthbert's hands. I took both hammer and slice away from him. I afterwards put Cuthbert in irons. He was very excited, but did not resist me. He said to me, while I was putting him in irons something like, "I'll let him know whether he's going to strike for nothing." Neither of the men were in my watch. I don't know if Cuthbert had been on shore that morning. I saw that Jerrard had been wounded directly I saw him. From the time I was talking to Cuthbert at No. 2 hatch till the time I heard the altercation at the fore-castle door, was about 10 minutes.

Cross-examined—When Cuthbert was coming toward me he was bleeding from the left eye, I believe, and the lower part of his face. I think I am right in saying the left eye. I don't remember Cuthbert saying he had been fighting with Jim; he said he had been kicking and striking him without cause. Only one of Cuthbert's eyes were wounded. I did not notice any wound on the forehead. He spoke loudly when he complained to me; so loudly what it was possible he might have been heard in the fore-castle. He was greatly excited at the time, like a man smarting under ill treatment. I could perhaps say he was in a phrensy. I do not know where he got the hammer and slice from. When I said it was 10 minutes between the time I spoke to Cuthbert and heard the altercation I meant about that time; I could not say accurately. The combing at the door of the fore-castle is about 2 ft. high. Two men could not pass through the door of the fore-castle together without squeezing themselves very hard. The same remark applies to the passage-way inside the door. I remember seeing the deceased in a shore boat alongside the ship on the 18th Oct. It was some time after the men were turned in after dinner. That would generally be 1 o'clock. I can't remember the time exactly. I did not speak to him when he came aboard. It appeared to me that he had something concealed under his waistcoat or jumper. I could not say the size of the thing concealed.

To the Juror—When I put Cuthbert in irons I did not notice any other wounds on his face than those I saw at first, the slice might have been left in the fore-castle by one of the men at dinner. It was the usual thing for the men to put on their belts and knives when they turned out.

Thomas J. James, surgeon, R. N., examined—I am a member of the College of Surgeons, London. On the 18th Oct. last I was serving on H.M.S. *Immortalite*. On the afternoon of that day I was sent on board the ship *Port Caledonia*. It was about 10 minutes to 4. On going on board I found a wounded man lying on a mattress in the fore-castle. He was wounded in the abdomen, below the navel. The bowels protruded and were badly wounded. A coil of intestines 18 inches long protruded and were wounded in four places. I had a sick berth steward with me. We cleaned the intestines and stopped the bleeding from them, putting on two artery forceps. I had the man removed to the saloon. Dr. Bowie came on board after that and I handed the case over to him, but continued attendance assisting Dr. Bowie. The incisions in the intestines were sewn up, all bleeding stopped and the bowels returned to the abdomen. To replace the bowels the wound in the abdomen had to be enlarged. I consider that was necessary. I administered chloroform and watched the patient while this was being done. I also found a wound on the left side of the chest, about 4 inches below the nipple. I probed this wound and found that it was only superficial. I afterwards assisted Dr. Bowie in a *post mortem* on deceased on the morning the 21st Oct. The cause of death was acute peritonitis, directly following the stab in the abdomen. Independent of the wound the condition of the patient was quite healthy. From the examination of the wound in the abdomen I should say it could be produced by a knife such as that shown me. The wound in the left breast would also have been produced by the same weapon. The direction of the knife in the abdominal wound was probably directly inward. When I first saw the man he had a pair of trousers and shirt on. I examined Cuthbert on the evening of the 19th, by lantern light. I found him bruised about the face and he had been bleeding from the nose. The skin had been grazed off his left eyebrow; I saw no other wound. His face was matted with blood and coal dust. The dead man was a taller and much more powerful man than the prisoner.

Cross examined—The wound in the abdomen might have been given by an upward stroke of the knife from below. The wounded man smelt of spirits. The effect of alcohol on the memory is frequently very marked if a large quantity has been consumed. The graze over the left eye of the prisoner might have been caused by his head having been pushed against a projecting corner or a bulkhead.

Dr. Robert J. Bowie, examined—I hold a degree of Master of Medicine of the University of Munich, and am practising at Nagasaki. I have been practising there since the 1st October this year. Previously I had practised in the San Francisco Polytechnic. I was engaged to attend the *Port Caledonia* from the day of her arrival in Nagasaki. I attended Jerrard for a slight trouble of the eyes. On the evening of the 18th I received a call to attend the ship at once as a man had been wounded. I went on board and found Dr. James already in attendance on the man. Dr. James handed the case over to me. The wounded man was about being put on the table when I arrived on the ship. The wounded man I knew as Jules Jerrard, night watchman of the *Port Caledonia*. I found him suffering from shock and collapse from penetrating wounds in the abdomen, with injuries to the intestines, and from a wound below the navel the intestines protruded about 14 inches in length. The intestine was wounded in four places, and had attached to it two artery forceps. The hemorrhage had commenced again. After a hasty conference with Dr. James we concluded it was necessary to stop the hemorrhage, dress the wounds in the intestines and return them to the abdomen to avoid exposure to the outward atmosphere. This was done and the usual antiseptic dressings applied. Upon further examination Dr. James discovered a wound in the left thorax which he probed and united with three stitches. We made the man as comfortable as possible and applied the usual stimulants, hot water to his feet and injections of brandy, and left him in the care of two attendants. I saw him in the morning when he complained of vomiting, which I attributed to the action of the chloroform. I had already formed and expressed the opinion that death was inevitable. The man died 56 hours after the wounding. I did not attempt to move the man from the ship. In my opinion it would have been fatal. In conjunction with Dr. James I made a *post mortem*. I found the organs generally healthy. Deceased though of slender build was a powerful man. The direct cause of death was acute peritonitis caused by the perforation of the intestine. Deceased, in my opinion, had from the first no chance of recovering from the wound. In surgery we should call it a penetrating stab wound and it could be inflicted with an ordinary sheath knife such as that produced. I examined Cuthbert's face the following morning. There was a contusion and abrasion of the skin over the left eye, and a tooth loosened in the left lower jaw. Subsequently I found his nose had been fractured. I should say that he had received more than one blow. I was present on the *Port Caledonia* when the deceased man was examined by Mr. Longford. The accused was also present. It was on the morning of the 19th, between 11 and 12. Jerrard was suffering from the effects of the shock but mentally he was clear. He was of course weak and I had to stimulate him from time to time. I still considered the case hopeless. I had not up to that time warned Jerrard of his condition.

Cross-examined—The depositions were read over to Jerrard by Mr. Longford. I think if I remember rightly that the accused had a severe black eye and a contusion over the left brow as well as a fractured nose. There were evidences of a blow on the left jaw, which had caused the loosening of a tooth. The injuries sustained by the prisoner showed that considerable force had been used. The contusion over the eye was more noticeable on the 19th than on the day it was produced. The effect on the memory of drinking to excess is to weaken it.

To a Juror—The contusion over the prisoner's eye looked more as if it had been done by striking up against some hard object than by a blow from the fist.

At this stage the Court adjourned till 2 p.m. Upon the Court reassembling after tiffin, Mr. Litchfield called.

Walter Kendal Tresize, who deposed—I am manager of the Yokohama Engine and Iron Works. I have prepared a plan of the British ship *Port Caledonia* (produced, Exhibit 4). I went on board and took the measurements of the fore-castle and the plan is an accurate one. The position of the chests, etc., is as I saw them on the 6th December.

Cross examined—The plan is drawn to scale, 1 inch to the foot. The doorway or corridor leading

on to the deck, is 2ft. 7, and the door itself 2ft. 0½ inches wide. The length of the corridor is 2ft. 6. If a man were lying in the top bunk athwartships he could see about two-thirds down the fore-castle diagonally. (Witness here marked the line of vision on the plan.) I saw a canvas bulkhead. It is not a permanent fixture. If the canvas screen were up the range of vision would be more circumscribed. The three tracings presented are accurate copies of the original plan (Exhibits 4 a, b, and c.).

Hans Wilhelm Jørgens Daehre, second mate of the *Port Caledonia*, recalled by Mr. Lowder in re-examination—I do not know whether or not there was a canvas screen between the two tiers of bunks in the fore-castle, on the 18th Oct.

Louis Vadesland, recalled by the Court and asked the same question, deposed that there was a little piece of canvas between Bill's bunk and the next. The canvas was there on the 18th Oct.

Robert August Hildebrand, examined—I am a German subject and a sailor on the *Port Caledonia*. I was lying in one of the lower bunks in the fore-castle on the afternoon of the 18th. The bunk is a fore and aft one, amidships. Witness, after some little difficulty, pointed it out on the plan.

Cross-examined—I know the prisoner by the name of Bill, the dead man we called Jim. On the 18th Oct. I had my dinner in the fore-castle. I can't remember the time. Jim came into the fore-castle a long time after dinner. I was in my bunk. Jim went to Frenchy's bunk and talked to him. Bill was not in the fore-castle then. Jim appeared to be a little drunk. After talking to Frenchy about what he had been buying, he asked who had been spewing in his bunk. After a time Bill came in and Jim said "you have been spewing here, take a bucket and clean it up." Bill refused, as he was not "peggy" that week. Then a quarrel arose, from the witness account of which in very broken English it was impossible to make sense.

To the Court—In the first fight Jim slung Bill on the chest and struck him with his fist and head. Bill went away after the first fight and soon came back again and went up to Jim at his bunk and they talked together. I did not see what took place till I heard Jim call out "I'm cut," then I jumped out of my bunk and saw Jim just by the door, and Bill close to him, the two having a knife between them.

The same witness was then further examined through the second mate Daehre as interpreter, and deposed—When Jim first came in to the fore-castle he went up to Frenchy's bunk and after telling him about his purchases asked him who had been making a mess in the corner. Frenchy did not answer him at once but after a little while Frenchy told him that Bill had been sitting on the bench sick. I do not know whether Jim then got his dinner. Shortly after Bill came in and went to sit down on the bench by Jim's bunk. I could not see whether Jim was in his bunk then. Jim was the first to speak, asking Bill if he had been sick there and telling him to get a bucket of water and clean it up. Bill said, "Who told you it was me, there's more people in the fore-castle." Jim said, "Will you go and get a bucket of water and clean it up." Bill said he would not, as he was not "peggy," Charley was. They said something more and then Jim jumped from the corner and got hold of Bill's arms, both then fought and Jim threw Bill on the chest between the bulkhead and the water barrel. Jim hit him several times with his fist and butted him with his head. Jim used bad language to Bill, who swore back at him and asked him to let him go; and after giving him one more shove against the bulk-head Jim let him go, saying to Bill, "Now will you clean it up." Bill then left the fore-castle. During that time I can not say whether Bill had his belt and knife on him. All the men do generally. Bill came back after a few minutes, perhaps from 2 to 5 minutes. When I next saw Bill he was standing close to the bench by Jim's bunk and said to Jim, "Why did you kick out my eye?" I do not know whether at that time Bill had his knife; Bill and Jim were still quarrelling, but I did not understand properly what they were quarrelling about. They went out of my sight and then I heard Jim call out, "I'm cut," and jumped out of my bunk.

I know the prisoner well. He was the best comrade among the Britishers on that side the fore-castle. He used to make them laugh many a time playing with his cat.

To the Court—I heard there was an examination into this case at Nagasaki. I did not give evidence because nobody asked me and I was not going to run after any man.

To a Juror—I did not see Jim put on his belt and go out. After I heard the cry "I'm cut," and jumped out of my bunk I stood by to see if I could be of any help. I saw Olsen there but I

did not notice the Frenchman. I can't say exactly how long it was between the time of the fight at the chest and when Jim called out he was cut.

Karl W. J. Daelre, second mate, recalled by Mr. Lowder—I believe the prisoner bore a good character generally on the ship; but I cannot say in particular, as he is not in my watch.

Joseph H. Longford, called by Mr. Litchfield deposed—I am H.B.M.'s Consul at Nagasaki. On the 18th Oct. information was laid before me of a stabbing case on the *Port Caledonia*.

On the morning of the 19th I went on board the ship with the prisoner. I found Jules Jerrard lying wounded on the table. I took down a statement made by Jerrard. I administered an oath to him. Cuthbert was present when the oath was administered; he stood close beside me, and all the time I was taking the statement down. Cuthbert was offered the opportunity of putting any questions he liked to Jerrard on the depositions taken. The examination was read over to Jerrard who put his mark to the depositions in my presence, that of the accused and two witnesses. When I went on board my first question to Jerrard was, "Do you know you are about to die?" He answered very emphatically, "No, I don't." I hurriedly drew up a heading to the depositions under the charge of cutting and wounding. I read it aloud before Cuthbert. I can't say for certain whether I read it aloud before taking the evidence, but I believe I did. The original depositions were sent with the others to this Court in a registered package. I acted as Coroner at the inquest on Jerrard. I identify the document produced as the depositions of Jerrard taken and signed by me.

Mr. Lowder—I understand that Mr. Litchfield proposes to read the depositions. I object.

Mr. Litchfield submitted that this was a deposition taken in the presence of the accused, in connection with the facts upon which the present indictment was based, and on which accused had a full opportunity for cross-examination. On the admissibility of this Counsel quoted authorities from *Taylor's Evidence of Law*, 7th Edition; and 24 Vol. Law Journal Reports, p. 5. Counsel quoted the Digest of the Law by Stevens C 17 Art 40. Counsel submitted that he claimed to put in the depositions under common law, which he contended was not set aside by Statute 11 and 12 Vic. 42, Sec. 17.

Mr. Lowder, in support of his objection quoted from *Russell on Crime*, 3rd vol. 4th Edition, Sec. 894, p 481, and cited several cases therefrom. One other reason strengthened counsel in his objection, which was that in the case before them the learned Judge in the Court below did not appear to be very sure whether he read the charge to the accused before he took the depositions.

His Honour—On the first point I consider the Crown is entitled to put in the depositions so far as the charge is concerned, which was one of cutting, and was the actual cause of death. On the other point I do not feel sure, from the frank statement made by the learned Judge below, that the prisoner fully understood his position with regard to the cross-examination of deceased when the depositions were taken, and on this ground I must rule that the depositions can not be read.

The Court at this stage adjourned till 9 a.m. on Saturday.

Upon the Court re-assembling, Mr. Litchfield said he only intended calling witnesses as to character.

John Barry, examined, deposed—I am a Nova Scotian by birth. I have been shipmate for 6 months with the prisoner. He bears a good character and is a good comrade; singing and jolly generally.

John Ford, examined—I am a native of Newfoundland. I have been shipmates with prisoner 6 months. He is a man of good disposition, kindly and jovial.

David Thomas, examined—I am of Welsh nationality. I have been shipmates with accused for 6 months. He is as jolly a man as I ever shipped with. Certainly not quarrelsome; nothing in that way.

Mr. Litchfield then proceeded to sum up the case for the Crown. He did not think it would be necessary to do so at any great length, only to bring out the principal points. The case for the prosecution depended principally on the evidence of four men; the Frenchman Vandeland, the German Hildebrand, and the mate Rull and second mate Daelre. Looking to the evidence of the two witnesses, Vandeland and Hildebrand, it appeared that the quarrel arose over a trivial thing but ended in a serious fight. Both witnesses were illiterate but had showed they had the power of describing a serious fight in very condensed terms, and that accounted for some discrepancies in their evidence. Counsel then read and compared some of the statements made by the two witnesses.

There was an apparent discrepancy; as described by the German the final fight took place directly after the first fight, and not as the Frenchman says after Bill had been on deck and returned to the fore-castle and said to Jim, "Now I will kill you." With regard to the occurrence on deck between the fight and the stabbing, when the mate saw accused bleeding from the nose and with one eye injured, the man's face was so covered with coal dust that it would be impossible to discern a bruise, though a cut and its effects could be seen. The second mate went further into details, and quoted the words of the accused, who asked what he was to do, after having been so treated by Jerrard. Then shortly afterwards accused was seen attempting to strike Jerrard with a hammer and evidently pursuing him in a very revengeful spirit. Then there was the evidence of Olsen, who saw Bill with a knife in his hand, which was grasped by Jerrard, Olsen took the knife away, and then accused picked up the hammer and slice to continue his attack on Jim. The remark made by accused when he was put in irons, "I'll let him know if he can strike me for nothing," showed his determination to carry out the deed which he actually did: these were the principal points in the case for the jury to consider.

Mr. Lowder, in summoning up for the defence, said that although the prisoner was not allowed to give evidence in the box, he was allowed to make a statement and Counsel proposed to read this statement and leave it to the jury to consider how far it could be reconciled with the evidence produced. The statement was as follows:—

"As soon as the mate told me to go and wash my face I went to the fore-castle; I thought Jim was on deck, but he was not. He was standing just inside the door close to his bunk. I had just got my left leg inside the door when he says:—"You'll tell the mate, will you?" And at the same time I got a blow from his right hand. It was meant for my face, but I threw my head up and I got it under the left jaw. He placed his left hand on the back of my neck to try and hold me down, or my head down, but I got my other leg inside the door, and the right side of my face being towards him I got a second blow over the right eye, which knocked my forehead up against the bulkhead. It was while I was in that position, that is to say, with my head held down by the left hand of the deceased, that I drew my knife."

Continuing, Mr. Lowder said that having drawn the knife, the prisoner lost all recollection of what took place.

If the position was as described the prisoner was in such a condition of excitement as to be irresponsible for his actions at the time. Counsel reviewed the evidence, which he submitted bore out the statement of accused. With regard to the Frenchman's evidence it would be clear to the jury that he could not possibly have seen what he had described, from his position in his bunk. Counsel had no intention of suggesting that the witness had perjured himself, but that he had mixed up what he had heard afterwards with what he had seen, as persons of low intelligence were very apt to do. There was evidence to show that there were wounds on accused's face not accounted for in the first fight, and strong corroboration of the statement made by accused that a fresh attack was made on him by Jerrard after he returned to the fore-castle, and that it was then that the knife was drawn by the accused. After the first fight accused had evidently no intention of revenge, as he went to the chief officer to complain and ask him what he should do, and was told to go and wash his face and go about his business. He returned to the fore-castle in obedience to this order not knowing that Jerrard was there, and certainly with no intention of renewing the quarrel. Counsel then referred to the distinction between murder and manslaughter, and argued that malice must necessarily be shown to establish a charge of murder. In this case no malice had been proved. If the statement of the prisoner was believed the fatal blow was delivered in self defence; and if that was established it would be justifiable homicide and the duty of the jury would be to acquit the prisoner.

His Honour, in summing up, said there was no doubt that the accused was responsible for the death of the deceased, and it was for the jury to decide whether he had cleared himself of the charge of murder. He thought the jury might dismiss from their minds the suggestion of Counsel that the act was done in self-defence under a reasonable fear of his own destruction or grievous bodily harm, as was required to justify the homicide. His Honour then explained the difference between murder and manslaughter. The test was whether the accused had time to cool down between the time the injuries were inflicted on him and the time he committed the final act. From

the evidence it appeared that the interval between the time the accused complained to the mate of the injuries inflicted on him by Jerrard and the time he returned to the fore-castle was ten minutes. It was stated in his favour that he returned to the fore-castle in obedience to orders and not from revengeful feelings. If the jury had any reasonable doubt on the point as to whether the prisoner had shown malice aforethought or not, it was their duty to give the prisoner the benefit of the doubt. If they believed that when accused went back to the fore-castle a fresh provocation was given him by the deceased, they would bring in a verdict of manslaughter; if they considered that there had been no fresh provocation and that accused had had sufficient time to cool down before he committed the final act they would come to the conclusion that he had committed murder.

The jury being asked if they would like to retire to consider their verdict, said it was unnecessary, and after a consultation of a few minutes returned a verdict against the accused of guilty of manslaughter and not guilty of murder.

His Honour said the jury had taken a merciful view of the case, in which he entirely concurred. Addressing the prisoner His Honour said that although he had not been found guilty on the capital charge, the crime he had committed was a most serious one. The prisoner was sentenced to five years penal servitude in Victoria Jail, Hongkong, until his removal to Hongkong to be imprisoned in the H.M.'s Consular Jail in Yokohama; the sentence to date from the day of his conviction.

His Honour thanked the jury for their services and the attention they had bestowed upon the case, and absolved them from further service upon a jury for two years from date.

H.B.M.'S COURT FOR JAPAN.

Before Mr. JUSTICE HIRAM S. WILKINSON,
TUESDAY, Dec. 14th.

H. E. ELLIAS VERSUS THE P. AND O. S. N. CO.

In this case the plaintiff sued the defendant Company for \$146.25 compensation for an alleged shortage of 19 lbs ivory in two packages shipped in Bombay and delivered in Yokohama on the 19th June per steamer *Ancona*.

Mr. M. Hassan, manager of the firm of Mr. H. E. Elias, appeared for the plaintiff, and Mr. Alf. Woolley, agent of the P. & O. Company, for the defendants.

Mr. F. J. Norman was sworn in as interpreter in Hindustani.

The petition and answer having been put in but not read,

His Honour asked defendant if any letters had passed between the plaintiff and himself.

Mr. Woolley said he had written two and had received several from plaintiff.

Two letters from defendant to plaintiff and four from the plaintiff to defendant were then put in; also the bill of lading.

His Honour said it appeared from the last clause in the petition that there was some ivory still to be delivered.

Mr. Woolley said there was no remainder. He was prepared to deliver all the ivory that had arrived on the bill of lading, but it had not yet been taken delivery of by plaintiff.

Continuing, defendant said he had three defences, first that the packages were landed in apparent good order and condition; second, that with regard to certain statements made in the petition as to the weight of certain packages, he knew nothing about the weight and the statements were neither admitted nor denied; third, insufficiency of packing.

The Court suggested that it would be best to begin with the evidence of the gentleman who had made the survey on the packages.

Mr. Woolley objected to the survey being admitted as evidence on the ground that defendants had not been notified that a survey was to be held and had therefore had no opportunity to have a surveyor on their side in attendance when the survey was made.

His Honour overruled the objection.

Thomas Fellowes Cruickshank deposed that he made a survey report on behalf of Lloyds' agents in this case (report produced). He was called in by the representative of the plaintiff, Mr. Elias. He was appointed by Lloyds' agents to survey for them. He had no special instructions with regard to these particular goods. The statements in the report were all correct to the best of witness' knowledge and ability. The report was signed by witness, and countersigned by Cornes & Co., as Lloyds' agents.

Cross-examined by Mr. Woolley—He had been

appointed for about four years to make reports on behalf of Lloyds' Agents. He did not remember ever before having to report on ivory. He could not say how many ways there were of packing ivory.

To the Court—The outside of the bags showed signs of having been mended. The cord which sewed up the end of the bag was broken and knotted and did not extend to the end of the bag, which, in his opinion, showed that it had been tampered with. Otherwise it was in good order and condition. The ivory was packed in double gunny bags and it was necessary to open the outer one to see what had taken place.

To Mr. Woolley, through the Court—Witness could not remember the weight of package No. 182, but it was in the report. He opened the bags where they were sewn; they were not cut.

M. M. Hassan, the plaintiff, deposed in Hindustani through the interpreter that he had been doing business in Yokohama for about four years. He was continually receiving ivory from Bombay. It was sometimes packed in gunny bags and sometimes in boxes.

His Honour asked the defendant if he complained against the gunny bags in particular in which this ivory was packed or whether his objection was to gunny bags generally as packing.

Mr. Woolley said his objection was to ivory being packed in gunny bags generally, which he considered constituted insufficient packing, against which there was a special clause in the bill of lading.

His Honour said that as a matter of argument he would assume that the packages were shipped in apparent good order and condition but that the bags had been opened and the goods abstracted. What view as to his liability did defendant hold on that point?

Mr. Woolley said he denied any liability whatever in that case.

His Honour said he would rule against him at once on that point and he could not allow defendant to shift his defence.

His Honour asked plaintiff what evidence he had as to the number of pieces of ivory shipped at Bombay.

Plaintiff said he had letters from Bombay.

His Honour ruled that he could not take the letters in evidence but would later on adjourn the case to give plaintiff an opportunity to get direct evidence from Bombay as to the number of pieces of ivory shipped. He did not suppose the defendants would care to go to the expense of a commission to Bombay, but he would suggest that plaintiff should obtain an affidavit from the person who shipped the goods in Bombay, who should show the same to the P. & O. Company's agent there so that the latter might have an opportunity of settling the case there.

Plaintiff remarked that in the bill of lading there was a statement of the weight of the packages, 224 lbs.

Mr. Woolley said that was not the definite weight of the packages, it was only the amount on which freight was charged.

His Honour said that was what he understood and advised defendant to call any evidence he was prepared with.

Mr. Woolley then called John James Efford, surveyor, who deposed that he went to the Custom House on the 13th inst. and inspected two packages, one marked M 182. Other marks on the bag were "P 68" and "pounds 110." He weighed this bag on the scale and the gross weight was 81lbs. the packing was gunny bag and apparently double. A different kind of twine had been used in the sewing from the original. He considered the package to be in fairly good condition excepting places where some holes had been made by the sharp parts eating through the gunny. He did not open the bag to ascertain the nature of the contents, but it was evidently some hard substance like bone. The other package marked M 183 weighed 79lbs. There was no other mark on the bag showing the weight. The gunnies were in a similar condition to No. 182, especially as regarded the twine and sewing up. It appeared as if the sewing had been done since the landing in Yokohama. It would have been impossible to put 38lbs more ivory in the bag marked 110lbs. Witness had carried a good deal of ivory from Ceylon, principally to London. Elephants' tusks from 50 to 80lbs. in weight are usually packed separately in straw and then sewed up in double gunnies, and were usually most carefully stowed in places where theft was impossible. Small pieces of ivory were usually packed in cases, iron hooped, with gunnies outside. He had never carried ivory in gunny bags and did not think it a good way of packing, as the bags are liable to be cut by the sharp edges of the ivory. Witness had never surveyed ivory before in Yokohama. It was the practice when a consignee held a survey of

cargo to notify the ship's agent or owner so that he might be represented by a surveyor himself.

Francis Napier Tillard, master of the *Rusetta*, examined by Mr. Woolley, explained that in Bombay there were four ways in which they received ivory—big tusks entirely unpacked, second, tusks packed in straw and gunny, third, small tusks packed in cases and, fourth, occasionally in gunnies as in the present instance. Out of eleven packages of ivory on the present voyage only two were packed in gunnies, the rest in boxes.

Captain Efford, recalled by the Court, said he did not examine if the holes in the gunny bags went right through. Some of the holes had been mended.

George Palmer, examined by Mr. Woolley, deposed that he had been fifteen years in the employ of the P. & O. Co., at Yokohama as office gunner, in which capacity it was his duty to look after cargo at the hatoba landed from or shipped on board the company's steamers. He landed two packages of ivory, numbered 182 and 183 about the middle of last June. They were in good order and condition.

To the Court—The packages were stowed in the company's godown at the hatoba. He had received them from the bullion room of the ship. He saw no holes whatever in the gunny bags.

His Honour, addressing the defendant, said the case as it stood was that provided it was proved by plaintiff that a larger number or greater weight of pieces of ivory had been shipped than were delivered to the plaintiff it would be with defendant to prove what had become of them or to prove by the bill of lading that he was not liable for the loss. To give an opportunity to the plaintiff to prove the amount of ivory shipped and also to the defendant to get a settlement effected by his Bombay agent, he would adjourn the case until the 15th March next at 10.30 a.m.

BRITISH CONSULAR REPORT FOR NAGASAKI.

(Concluded from Saturday.)

MISCELLANEOUS EXPORTS.

Except coal, there is really nothing in the list of exports from Nagasaki that merits any special notice, or except as affording employment for British shipping, that is of interest to British trade. Cotton yarn has commenced to appear in the list, having been exported both to Shanghai and Newchwang, but as yet to a very small extent. Timber has hitherto been a prominent item among exports, but now prices on the spot have so risen that it is being largely imported from Western Canada and the United States. Of manufactured goods, such as matting, porcelain, textiles, &c., the whole export is insignificant, though the floor matting produced in the district is both singularly beautiful and varied in its design and fairly substantial and durable in its texture. In the latter respect it appears to be superior to that which is so largely exported from the other parts. Of the whole quantity exported from Japan only about 1½ per cent. goes to the United Kingdom, and it is strange that there its comfort and beauty as a summer floor covering apparently continue to be almost unknown.

Assuming that the value of the foreign trade of Nagasaki makes but a poor appearance when compared with that of the two principal ports in Japan, Yokohama and Kobe, the bulky nature of the principal imports and of nearly all the exports affords enough employment for shipping to enable the port, both in the number and tonnage of vessels that enter it, to hold its own fairly against not only the Japanese, but, with the single exception of Shanghai, against all Chinese ports. The harbour is always crowded, presenting a busy and bustling appearance, and one of the sources of the present prosperity of the port is undoubtedly the supplying of the requirements of the great number of ships that come here, not only vessels of war, but merchant ships.

With the single exception of the French, all lines of mail steamers now running to the East call at Nagasaki both on their outward and inward voyages, and this is the only port of call either in China or Japan of the magnificent vessels of the Russian Volunteer Fleet.

Full statistics of the shipping both of Nagasaki and the ports of Shimonoseki, Moji, and Kuchinotsu are contained in the Table (Annex 4) appended to this Report, and it is unnecessary to recapitulate them here.

The preponderance and advance of British shipping are both very marked. The number of British vessels that entered Nagasaki in 1896 was 335 and the tonnage 746,130, and the total entered both in Nagasaki and the subsidiary ports, 772

vessels of 1,582,479 tons. The steady increase in British tonnage is shown by the following figures of the entries during the last five years:—

Year.	Entered Nagasaki.		Total Entered Nagasaki and Subsidiary Ports.	
	Number of Vessels.	Tons.	Number of Vessels.	Tons.
1892 ...	219	372,638	410	662,559
1893 ...	232	464,552	482	890,374
1894 ...	250	493,900	726	1,128,208
1895 ...	343	688,608	722	1,389,983
1896 ...	335	746,130	772	1,582,479

PUBLIC WORKS.

Sufficient progress was made in the construction of the Kiushu Railway to enable a short section from the port of Nagasaki to Nagoya, a small town on the Gulf of Omura, to be opened to public traffic during the currency year. From Nagoya passengers are ferried across the gulf in a small steamer, and join the main line from Kumamoto to Moji at Haiki, a town close to the opposite shore. The construction of the section from Nagoya round the northern shore of the gulf to directly join the main line is being proceeded with, but its completion is not expected for at least two years.

The ambition of Japanese engineers is leading them to discuss and contemplate the construction of a bridge across the Straits of Shimonoseki so as to unite the main line of the Kiushu Railway with that of the Sanyo Railway from Shimonoseki to Hiogo, and enable passengers to proceed on one unbroken journey right through from the extreme south of Kiushu to the extreme north of the mainland. As the Straits of Shimonoseki are at their narrowest part fully one mile in width and the current through them frequently attains a velocity of 8 miles, the bridge must be constructed at a height which will enable the very largest ocean-going steamers to pass beneath it, and as the district is subject to the visitation of typhoons of the most violent type, Japan will, should this project ever be successfully carried out, achieve the greatest triumph in bridge building in the world.

Extensive and important works for the deepening and reclamation of large parts of the harbours are now, after several years of planning, being put in hand. It is intended to deepen the harbour to a minimum of 27 feet at low water by excavating some 485,000 cubic *tsubo* of soil. This will be utilised in reclaiming some 180,000 square *tsubo* of land all protected by a strong stone wall on the sea front. The water frontage available for shipping purposes being very limited, insufficient for present and wholly so for prospective requirements, this reclaimed land should be most valuable, and the result of the whole will be to give greatly extended facilities for the anchorage of ocean ships of the largest size, and convert the useless, unsightly, and insanitary tide flats at the head of the harbour into valuable sites for building purposes. These works are to be carried out in six years, and the total cost will, it is estimated, be about 3,100,000 dol. Of this amount the Imperial Government will contribute 800,000 dol., the local government 250,000 dol., and the balance will be raised by bonds, which will be offered for sale from time to time as required. A considerable quantity of machinery will be required for the work, but it has already been contracted for in the United States.

During the current year the laying of a deep-sea telegraph cable from Japan to Formosa, commenced in the autumn of 1896, has been successfully completed, and as this is the first instance in which the Japanese engineers have, unaided by foreign experts, undertaken the laying of a deep-sea cable of considerable length, their completion of the work without serious mishap is a cause of some triumph to them. The present cable extends from the southern point of Kiushu, near the entrance to the Gulf of Kagoshima, via the Loochoo Islands, to the northern point of Formosa, the total distance being about 800 miles. For the purpose of laying the cable, a fine steamer of 2,000 tons, fully equipped with cable tanks and all the best modern appliances, was constructed in England at a cost of about 500,000 dol. The cable, about 1,300 miles in length, was also obtained from England, and brought out to Japan partly in the special steamer, and to a large extent in two British steamers. It was, in the first instance, stored on arrival in four circular tanks specially constructed for its reception on a small inlet in Nagasaki harbour, these tanks and the immediate anchorage and landing places being constructed in so elaborate a fashion that it is evident they are not designed for use in connection with one cable only. Neither the cost of the steamer nor that of the cable appears in the cus-

tons returns, or both would add substantially to the value of the imports from England in 1896.

GENERAL REMARKS.—SHIPBUILDING IN NAGASAKI.

Considerable extension was made in 1896 to the dockyard and engineering works at this port, the largest dock having been lengthened so as to be capable of receiving ships up to 500 feet in length and the construction of a new dock of a length over all of 371 feet having been completed. Very extensive additions were made to the moulding, boiler, and engine shops, and all modern machinery provided that was necessary to render the works efficient in the highest degree. A large machine shed for iron workers, and new saw mills and joiners' shops are now in process of construction, and all the valuable machinery required for them has already been ordered from England. Designs are also in hand for a graving dock of the largest size.

These works, carried on under liberal and enlightened management, with the assistance of European experts in all branches, long since acquired a high reputation for good and economic workmanship in the docking and repairing of vessels of every description and nationality, from ironclad cruisers of the first class down to coasters; and many small steamers for coasting trade in Japan have been built and completed with engines, boilers, and all fittings.

During the past year more ambitious undertakings were started, and the building of ocean-going steamers for the first time undertaken. One steamer of 1,500 tons registered tonnage, built under the strictest requirements of Lloyd's special survey, for one of the principal shipping companies of Japan, has already been completed, and was successfully launched early this year, and another of 6,200 tons registered tonnage, with a speed of 12½ knots, is now under construction, and so far advanced towards completion that her launch may take place in November next. The latter is being built for the National Mail Steamship Company (Nippon Yusen Kaisha) on precisely similar designs to those on which steamers have been recently constructed for the same company on the Clyde, and the result of this experiment, as to whether she can be completed in Japan at no greater cost than if built in England should be, and is by the Japanese themselves, awaited with much interest. The best hopes entertained were that her cost would be no greater, but as many special expenses had to be incurred on her account, it is equally hoped that if this result is attained in the present instance, much better ones will, with the aid of the experience, be attained in the next. Before the present could be commenced at all, considerable alterations had to be made in the arrangements of the yard, so that the machinery necessary for laying the frames and beams of so large a vessel could be suitably placed, new furnaces and sheds had to be built, and workmen hitherto accustomed to deal with frames of at the outside 3 inches in diameter, taught to deal with those of 6 inches, with proportionate increase of length and weight. The services of a distinguished English shipbuilder were engaged, and under his superintendence the construction of the vessel is now proceeding, it being the desire of the Japanese to turn her out complete and ready for sea in no longer time than that in which the same result could have been attained on the Clyde. So well satisfied are they with their present progress, that material is now being ordered from England for a second vessel of the same time type and dimensions for the same owners, and the Japanese may therefore be said to be now well started on a career of ocean steamship building. Two other large steamers are also in progress of construction. One a steamer of 2,500 tons is in frame, but this vessel being intended for the owners of the yard, work is temporarily suspended in favour of the steamers building to order. The keel of another vessel intended to be used as a training ship by the Tokyo Mercantile Marine School is also laid. The latter will be a sailing vessel with auxiliary steam power capable of a speed of 6 knots, built of steel, with cellular double bottom throughout its entire length, of 1,540 tons registered tonnage, and 238 feet in length. Designs are in preparation for two salvage steamers to be built principally of wood, but with bulkheads and ballast tanks of steel, and a large amount of work is being done as well in the construction of steam launches and general repairs. Under the latter heading 24 vessels of war of various nationalities, of an aggregate tonnage of 63,104 tons, and 65 merchant steamers, of 190,668 tons, were docked during the year, and 36 vessels of 21,047 tons placed on the slips.

Generally speaking, the year 1896 was a fairly satisfactory one to both foreign and Japanese traders in Nagasaki, and very marked evidence

has been given of the confidence that is held in the future of the port by the enormous rise, amounting to full 500 per cent. on the prices of three years ago, at which land has been sold during the year. For a miscellaneous trade, supplying the wants of the inhabitants at large, there is not much prospect at least for some years to come.

There is no demand for piece goods and the rest of the miscellaneous articles that are imported to so large an extent into Kobe and Yokohama, and the native middlemen, while much smaller in their ideas and transactions than in the two larger ports, are characterised by equal lack of faith and disposition to fulfil the term of any contract involving a possible loss. But at the same time, as before remarked, there will be a continued demand for requirements of the shipbuilding, mining, and spinning industries sufficient to maintain the import trade of Western goods on at least its present level.

The Island of Formosa has not yet answered the expectations formed of it by the Japanese, but in whatever wealth it may ultimately bring to Japan, Nagasaki as the nearest port must have a large share, while the opening of the Siberian Railway must also tend greatly to its advantage, and from its proximity to the Pacific terminus of the railway, give it also a large share in whatever trade Japan may develop with Siberia. And, finally, the connection of the port with the interior of the Island of Kiusiu by rail should make it the distributing centre of whatever goods of foreign production the people may ultimately find they require.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

INDIA COUNCIL BILLS.

London, Dec. 9.
Tenders will be received on the 15th inst. for India Council Bills to the amount of forty lakhs of rupees. The Secretary of State sells bills at £97 9s. 8d. for about ten millions sterling, instead of thirteen millions as estimated in the Budget.

THE BRITISH ARMY.

London, Dec. 10.
The Marquess of Lansdowne, Secretary of State for War, speaking at Edinburgh, sketched the army programme for Great Britain, which he said required three Army Corps at home to repel possible invasion, with ability to mobilise two more for offensive purposes abroad, and to despatch small bodies as required without mobilization. The Army should also be able punctually to supply India and the Colonies, and it was proposed to regroup regiments of infantry on a basis of four battalions instead of two, and to re-engage a small number of reservists annually for extra pay, to be in readiness in case of operations not justifying the calling out of the whole of the Reserve. He hoped to be able to provide for the soldier a clear shilling a day, and also to enlist men for home service for three years with the option of entering the Reserve or remaining with the Colours. He was determined that the Army should not be deficient in artillery.

GERMANY AND CHINA.

London, Dec. 11.
The *Times* correspondent at Peking telegraphs that Germany has undertaken to evacuate Kiaochow, receiving instead, as a coaling station, Samsao, in Fuhkien.

The *Times*, in an article on Germany's action in China, says that it implies the redistribution of the balance of power in the East, and recalls the British Rights Convention of 1846 in reference to a group of islands at the mouth of the Yangtze, saying that the time may come when Great Britain may have to claim them.

London, Dec. 13.
The *Times* statement that Germany had undertaken to evacuate Kiaochow, receiving instead San-sha, in Fohkien, as a

coaling station, is positively denied in Berlin.

Reuter's correspondent at Peking telegraphs that China has yielded practically on all points in the Kiaochow affair, and that Germany has definitely refused to leave that place.

London, Dec. 13.

The Emperor William goes to Kiel to say farewell to Prince Henry. The squadron will sail on the 16th instant.

THE ADVANCE ON KHARTOUM.

London, Dec. 14.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, speaking at Bristol, said that an Egyptian force will, in due time, advance to Khartoum, and that the Government will, if necessary, ask Parliament to aid Egypt in the achievement of that task.

OPERATIONS IN AFRICA.

Major Jenkinson occupied Bona unopposed on the 17th November. The French claim Bona to be within their hinterland.

THE WEST AFRICA COMMISSION.

London, Dec. 14.

It is understood that in an interview, the Right Hon. Joseph Chamberlain, Secretary of State for the Colonies, said that Baron de Courcel, French Ambassador in London, had distinctly facilitated the settlement of the matters in dispute between England and France in West Africa.

THE ITALIAN CABINET.

The Marquis di Rudini has informed King Humbert that he is unable to reconstruct the Cabinet.

THE ENGINEERS' STRIKE.

A ballot has been taken among the striking engineers, 95 per cent. of whom have rejected the proposals of the masters.

THE NEW ADMIRAL.

London, Dec. 15.

Vice-Admiral Sir Edward Seymour, C.B., has been appointed to succeed Sir Alexander Buller as Commander-in-Chief on the China Station.

THE RUSSIAN PRESS AND KIAOCHOW.

The Russian Press, in dealing with the subject of the capture of Kiaochow, gives vent to profound dissatisfaction at Germany's action, but the Russian Government remains impassive.

(FROM OUR OWN CORRESPONDENT.)

U. S. NAVAL APPRENTICE DROWNED.

SUSPICION OF FOUL PLAY.

Nagasaki, Dec. 13, 6 28 p.m.
Last night, Apprentice Epps, belonging to the U. S. Flagship *Olympia*, was found drowned in the harbour. It is believed that he was murdered by sampan-men.

(FROM THE "N.C. DAILY NEWS.")

PROTECTION OF CHINESE BRITISH SUBJECTS.

Singapore, December 6.

The Governor of the Straits Settlements telegraphed to the Consul at Amoy asking for the release of a Straits-born Chinaman incarcerated in a native prison in China while travelling with a Straits passport.

The Consul replies that the Minister refuses protection because the Straits-born man had not registered at the Consulate until after the suit in which he is concerned had begun.

(FROM THE JAPANESE PAPERS.)
RAILWAY COLLISION.

Yokkaichi, Dec. 16.
Last night two passenger trains collided on the Kansai Railway and several passengers were more or less injured.

THE KOREAN CABINET.

Seoul, Dec. 16.
Min Chhong-mik has been appointed Minister of Finance.

INDIAN COTTON.

Osaka, Dec. 17.
Yesterday the first sale of new Bombay cotton was made at yen 17 and 16.50. The Naigai Wata Kaisha bought 1,500 bales at 17 yen per picul for two months delivery.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at 184, Creek-side.

The Tokyo Chess Club holds its meetings at 3, Uchi-Saiwai-cho Ichome (next to the Tokyo Club).

SOLUTION OF PROBLEM NO. 349.

| 2—R to Q 5, mate | 1—Any other |
| 2—R to B 4, mate | |

Correct solutions received from W.H.S., P.E.F.S., J.W.E., D.D., and F.B. (Tokyo).

PROBLEM NO. 351.

By J. KING, Singapore.

White to play and mate in three moves.

We have pleasure, says the *Singapore Free Press*, in submitting to our readers the above problem by a local author of merit. Mr. J. King, although of a retiring disposition, especially of late years, is known as one of the best solvers we have. He can also with justice claim to be the *doyen* of problem composers in Singapore, and, bold as the attempt might appear, has competed on several occasions with credit to himself in the home tournaments against some of the very best European composers.

CONCERNING PROBLEM 349.

A correspondent of *The Sporting and Dramatic News*, London, charges Mr. O'Hara with cribbing his problem (our 349). This writer declares that the problem is a facsimile of one of Pospisil, published in *The Illustrated London News*, some five years ago. This seems to be the second offence of Mr. O'Hara in the way of borrowing other folks' ideas, and the editor of *The American Chess Magazine* suggests that probably he "will try something original next time, or not try at all."

FREE INSTRUCTION CLASSES.

In answer to the notice which appeared in a previous issue we have received the names of two gentlemen who desire a few lessons in Chess. We hope that more will come forward next week, when the classes begin.

CHESS IN AMERICA.

There is a peculiar smartness or crispness in American chess quite in harmony with the gen-

eral nature of all things American, says Mr. Gunzberg. The appended short match skirmish will have quite a refreshing effect on lovers of the game who get a surfeit of modern chess strategy in match play. The game was played and won by Mr. Chadwick, the secretary of the Brooklyn Chess Club.

White—Chadwick	Black—Otto.

Position after Black's 15th move.

There is little to be said of the game up to the present. After White had firmly established his Kt on K 5, Black played energetically in order to prevent the threatened accumulation of White's attack. The game is principally remarkable for the ending, which was as follows:—

- | | |
|----------------|---------------|
| 16—Q Kt to B3! | 16—Kt takes P |
| 17—Q to B3 | 17—Kt takes R |
| 18—Q to B4, ch | 18—K to R sq |
| 19—Kt to Kt 5! | |

A very effective move.

RUY LOPEZ.

Ruy Lopez was a Spanish priest, who lived in the sixteenth century, and is commonly supposed to have invented the opening which bears his name. In an Italian translation of his treatise on chess, dated 1584, several ways of opening a game are given, but amongst them we have failed to discover the Ruy Lopez. In the *Lancet* of 1823 the following is given as the Ruy Lopez opening:—"The opening in which Ruy Lopez chiefly delighted, and to which his name was actually given, consists in playing queen to king's second, after the king's pawn has been played two squares and the king's bishop to queen's bishops fourth on both sides, and then playing the king's bishops pawn two squares. This is a safer game than the king's gambit, since the second player, if he takes the pawn, cannot attempt to sustain permanently the gambit pawn without greatly injuring his position." If this be true, it is only bare justice to relieve his memory of the stigma of having discovered the duller, dreariest, and least enterprising opening which is to be found in "the books." We used to think that if Ruy Lopez expiated his sins by a long spell of purgatory it served him right—now we don't, says the *Sydney Mail*.

THE CHESS BOARD.

My little love, do you remember,
Ere we were grown so sadly wise,
Those evenings in the bleak December,
Curtained warm from the snowy weather,
When you and I played chess together,
Checkmated by each other's eyes?
Ah! still I see your soft white hand
Hovering warm o'er queen and knight;
Brave pawns in valiant battle stand;
The double castles guard the wings;
The bishop, bent on distant things,
Moves sliding through the fight.
Our fingers touch, our glances meet
And falter; falls your golden hair
Against my cheek; your bosom sweet
Is heaving; down the field your queen
Rides slow, her soldiery all between,
And checks me unaware.
Ah! me! the little battle's done;
Dispersed is all its chivalry!
Full many a move since then have we
Mid life's perplexing checkers made.
And many a game with fortune played.
What is it we have won?
This, (this at least, if this alone:
That never, never, never more,
As in those old, still nights of yore—
Ere we were grown so sadly wise—
Can you and I shut out the skies,
Shut out the world and wintry weather,
And, eyes exchanging warmth with eyes,
Play chess as then we played together.
—The late Lord Lytton ("Owen Meredith.")

EXPORTS.

RAW SILK.

A number of transactions have been effected during the week both for Europe and the United States at hardening prices, which at the close are fully \$50 above the lowest price reached last month. Stocks amount to 10,000 piculs against 20,700 piculs at same date last season. The *Victoria* took 630 bales in the 14th and the *Tacoma* 610 bales, for America, and the *Salazie* on the 13th 812 bales for Europe.

INFANTILE LOVELINESS of the skin, scalp, and hair is assured by the use of CUTICURA SOAP, the most effective skin purifying and beautifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery.

To preserve, purify, and beautify the skin, scalp, and hair of infants and children, and restore them to a condition of health when affected by distressing, itching irritations and scaly eruptions, no other treatment is so pure, so safe, so speedy, as warm baths with CUTICURA SOAP, assisted, when necessary, by gentle anointings with CUTICURA, purest and sweetest of emollients and skin cures.

For bad complexions, pimples, blotches, red, rough hands and shapeless nails, red, rough, oily, mothy skin, dry, thin, and falling hair, itching and scaly eruptions of the skin and scalp, and simple baby blemishes, it is simply wonderful.

Sold throughout the world. British depot: F. NEWBERRY & SONS, London. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U.S.A. "All about Baby's Skin," a 64-page book, post free.

MILKMAID BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
 constitutions will discover that by the use
 of this wonderful medicine there is "Health
 for all." The blood is the fountain of life, and its
 purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomed to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. Coates, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1890.

No notice will be taken of anonymous correspondence, whatever intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 25TH, 1897.

BIRTH.

At No. 113, Bluff, on Friday, the 17th inst., the wife of WM. T. PAYNE, of a son.

MARRIAGE.

On the 8th December, 1897, at the Union Church, Hongkong, by the Rev. G. J. Williams, HARRY KAYE CECIL FISHER, to MAY AMANDA GREENE.

DEATHS.

At No. 237, Bluff, December 19th, ISABELL, wife of H. F. ARTHUR, Esq.

On Sunday, Dec. 19th, 1897, at Torano-mon, Tokyo, RUTH, the beloved wife of Commander M. SQUIRE, R.N.

SUMMARY OF NEWS.

SIR FRANK LOCKWOOD, the famous English Q.C., and caricaturist, is dead.

RUSSIA, with the consent of China, has occupied Port Arthur as a temporary winter base.

Owing to political disturbances in China, Marshal Marquis Yamagata has postponed his departure to Kyoto.

H.I.H. THE CROWN PRINCE left Shimbashi Station for Hayama, Miura-gun, on the morning of the 21st inst.

H.I.H. THE CROWN PRINCE having attained his majority, has been allotted a seat in the seventh divisional section of the House of Peers.

A TEAM of Kobe school-boys visited Yokohama

this week and inflicted two crushing defeats on Yokohama lads at Association football.

We note that 10,000 yen out of the 20,000 yen required for the rebuilding of Christ Church, Yokohama, has already been subscribed.

ACCORDING to latest investigations, the number of Japanese residents in Siberia is 2,201, of whom 1,422 are residing at Vladivostok.

A FIRE that broke out in a storehouse at Yokohama railway station on Wednesday night destroyed goods to the value of 1,000,000 yen.

Most conflicting news comes from China in regard to the movements of the squadrons of the Powers, and Germany's attitude in the Kiaochow deliberations.

HEAVY snowfalls are reported from the northern and north-western provinces, where trains are blocked in drifts and persons are perishing from the intense cold.

MR. TAKANO, ex-Judge of the Formosa High Court, who held the first class, fifth grade, of the Fifth Order of Merit, has been deprived of his rank and title.

AFTER leaving Kiel, the German squadron for the Far East called at Spithead to enable Prince Henry to bid farewell to Queen Victoria, his grand-mother.

THE fighting among the Afridi hills on the Indian frontier still continues, the tribesmen making a desperate defence. Losses on both sides are very heavy.

THE political situation is very interesting at present, though the only certain thing is that all the political parties in the Diet are dead against the Government.

THE Managers and Secretaries of the various sections in both Houses of the Diet were elected on 21st inst. On the 24th the Diet was formally opened by the Emperor in person.

A LARGE junk called the *Elju Maru*, owned by Mr. Hanada Tomitaro of Hiroshima Prefecture, sank off Shingawa about 4 p.m. on the 15th inst. All the *sendo* were saved.

ALPHONSE DAUDAT, the well-known French novelist and critic, has been stabbed to death by an obscure actor. He was entering the Adelphi Theatre, London, when the deed was done.

H.I.H. PRINCE KOMATSU, Superintendent of the General Staff Office, who recently went to Tsushima and Loochoo on a tour of inspection, returned to Tokyo on the afternoon of the 17th instant.

THE re-building of the Ryogoku Bridge, Tokyo, will commence early next year. It is expected to be finished by October of 1899. The new bridge will cost about yen 280,000 and will be built of iron.

THE Communications Department lately gave an order for the supply of electrical plant for the installation of a telephone service between Tokyo and Osaka. It is to be delivered by the end of January.

THE amateur Theatians of Yokohama will give a performance of "Confusion" about the 8th of January. They then journey to Kobe where they play "The Passport" and "Confusion."

THE Commander of the P. & O. steamer *Malacca* was knocked down on the Pier on Tuesday, through the breaking of a cargo sling, and now lies at the General Hospital with an injured thigh.

MR. TAKAHASHI KOREKIYO, Vice-President of the Yokohama Specie Bank, and Messrs. Kawa-

kami, Ito, and Kimura, of the Bank of Japan, who are ordered to Europe for the inspection of banking systems there, will leave on the 11th of January next.

THE Government subsidy toward repairing the damages caused by the autumn floods is estimated at yen 1,000,000. Niigata Prefecture requires the largest share of the subsidy, and is followed by Toyama, Fukui, Gumma, Saitama, Tokyo, and others.

BEFORE the German squadron in charge of Prince Henry of Prussia left Kiel for the Far East, the Emperor and the Prince delivered some extraordinary speeches which have aroused much comment. Indeed, the German press accuses Prince Henry of blasphemy.

THE export of straw braid from Kobe is gradually increasing year after year. The amount exported from January to October last, together with that during the corresponding period of last year (1896), was as follows:—1897, 2,684,488 bundles valued at yen 1,437,601; 1896, 1,924,973 bundles valued at yen 831,008.

SPORTSMEN are increasing in number year by year. The following table gives the number of shooting licenses granted by the Department of Agriculture and Commerce during this year, together with those issued last year. In 1897 up to Dec. 20th, first class (sportsmen) 22,440; second class 182,947; total second class 182,947; total 205,412. In 1896, first class (hunters) 26,672; second class 174,493; total 200,165.

ON the night of the 9th inst. a number of tenant farmers in Shita-gun, Shizuoka Prefecture, surrounded the house of Mr. Konogai, the landowner, requesting a reduction in their rent, which they pay in kind. A policeman patrolling the vicinity, upon hearing the noise came up and tried to suppress the disturbance. He was severely handled by the farmers, his uniform being torn to pieces. On the 17th inst. seven farmers were arrested and sent to Shizuoka prison.

THE dearest of weeks in a phenomenally dull season has been entered upon for wholesale business of all kinds. Even when funds are redundant and trade generally prosperous the week or two before and after New Year are proverbially flat and unprofitable from a mercantile point of view; but this year, with money tight as a dam, and banks and companies in difficulties all over the country, the general stoppage in business is accentuated. To add to the troubles of local merchants, about a million dollars' worth of silk, curios, and other goods have been destroyed by a fire which occurred at the storehouses of the Yokohama railway station on the night of the 22nd instant. A vast amount of goods for transport had been accumulating at the station for some time—owing to lack of sufficient transport facilities—when the fire occurred, and so far as we can learn, the greater portion of this, owned principally by Japanese, was uninsured, and it is said considerable litigation is likely to ensue, the question being raised as to the liability of the Railway Department as general carriers. In imports nothing has been doing with the exception of a few sales of sugar and kerosene for immediate requirements. In exports the boom in the silk market which commenced two or three weeks ago has subsided, and very few sales have been effected during the past week, while prices are fully maintained, stocks being smaller than usual at this period of the year. Some small transactions have taken place in tea, principally of low grades, but the season is practically over and what remains is very common stuff. Exchange on China is slightly improved.

SPIRIT OF THE VERNACULAR PRESS.

The *Fiji Shimpō* publishes an article on the subject of the Codes and the Revised Treaties. It shows, in some detail, that the promulgation of the remaining portions of the Codes during the first half of next year is essential to the operation of the new Treaties in July 1899, and it recounts the story of the unceasing and urgent efforts made by the nation ever since 1870 to achieve that object; in other words, to gain admission to the comity of nations on equal terms. Statesman after statesman essayed the task and sacrificed their political careers in the attempt, and it was not until England suddenly adopted a liberal line in 1893 that success came at length in sight. Now, at the eleventh hour, when the consummation of the great work depends upon one more simple and easy step, there is danger lest the much hoped-for end should be deferred owing to the squabbles of political parties. The *Fiji* writes forcibly but does not suggest any course to be adopted by the Diet. It simply urges the passing of the Codes, since all parties are agreed as to the national expediency of that measure. Inasmuch, however, as a very large majority of the members of the Lower House are determined, according to present indications, to introduce either a motion of want of confidence in the Cabinet, or an Address to the Throne in that sense, and inasmuch as the Cabinet seems equally determined to dissolve the House should it adopt such a course, the *Fiji's* article would have been more practical had it indicated some means of saving the Codes from the fate that must overtake all Government Bills in the event of dissolution.

The *Nichi Nichi Shimbun* discusses the same subject, but regards it in a different light. It endeavours to show that the Government is merely seeking to intimidate the Diet by holding up before it the failure of Treaty Revision unless the Codes are passed. In support of that singular proposition the *Nichi Nichi* alleges that the operation of the Codes is not by any means the only preliminary essential to be made. In fact, the duty of making preparations may be said to have devolved upon the present Cabinet, the task of revising the Treaties having been virtually achieved by the Ito Ministry. Formosa, according to the *Nichi Nichi*, is the field where the Government's neglect is most conspicuous. Formosa is an integral part of the Japanese empire. The Codes must be in force there as well as in other parts of Japan before the year's notice required by the Treaties can be properly given to the various Powers. No steps have been taken, however, to bring Formosa within the purview of the Codes, and it will thus be possible for Western Governments to say, "we stipulated that your new laws should be in force throughout the whole empire, not in a portion of it only, before notice was given to us of your intention of carrying out the Revised Treaties." It may be contended, indeed, that as Formosa did not belong to Japan at the time when the first of the Revised Treaties were negotiated, their provisions can not properly be said to extend to that island. If that be the Government's view, the fact should be made public as soon as possible. If, on the other hand, while regarding Formosa as an integral part of the empire, the Government does not see its way to enforce the new Codes there, then due notice should be given to the Foreign Powers of this country's inability to discharge the obligations which it undertook when concluding the Treaties, and of the necessity of postponing the operation of the latter. Such is the exceedingly crooked stick with which the *Nichi Nichi* essays to belabour the Cabinet.

The vagueness that disfigures the platforms of all the political parties is severely criticised by the *Kokumin Shimbun*. Not one of the political associations arrayed against the Cabinet puts forward an intelligible statement of the reasons of its opposition. Some talk of the military expansion programme as too great for the

resources of the country, but they do not say how or to what extent they would reduce it, or whether their idea is only to lengthen the period for carrying it out. Then, again, there is an outcry against increasing the taxes, but those that condemn the measure do not explain how the administration of the State is to be conducted unless an addition be made to the taxes. Every one would be pleased to dispense with a measure so unwelcome as increased taxation, but what people want to know is how it can be dispensed with. Reform of the administrative organization is another ground for attacking the Government. In what does administrative reform consist? As to that the parties are absolutely silent. In former years, every one understood that the chief aim of such reform was to reduce administrative expenses. Count Okuma has exploded that idea. He has pointed out that administrative reform might, in certain cases, involve the appointment of additional officials and the outlay of larger sums. Government and Opposition alike are anxious to effect administrative reforms, but the Opposition carefully refrain from offering any explanation of their idea of such reforms. Opposition is all very well. It is wholesome and useful. If men hold different views, they are under a moral necessity to criticise each other. But when opposition takes the form of simple obstruction, when parties fighting against the Cabinet lack the manliness to state their views clearly and confine themselves to firing shots under the cover of darkness, they expose themselves to the reproach of struggling, not for the assertion of principles, but for the sake of grasping power and office.

In the *Nippon* we find a carefully reasoned article with reference to the holding of shares by foreigners in Japanese companies, a subject which is now receiving much attention, in consequence of the very general desire for the introduction of foreign capital. In the case of several companies the rules contain a provision explicitly limiting the shareholders to Japanese subjects. Such companies are, for instance, the various Exchanges, the Bank of Japan, the Specie Bank, and so on. Similarly foreigners are excluded from enjoying the privileges granted by the Law for encouraging Navigation and Ship-building, and the Mining Regulations. On the other hand, no such discrimination appears in the Law of Companies which forms part of the Commercial Code. But there is always the practical difficulty that so long as foreigners are exempted from Japanese jurisdiction, they can not be made amenable to the disciplinary or punitive provisions of a Japanese Company's by-laws. Besides, since ownership of real estate by aliens is illegal outside the Settlements, any shares with which such ownership is connected could not be held by foreigners. It is obvious also that actions at law arising out of the affairs of a company would have to be carried into a Consular Court if a foreigner were defendant, and there would then be the very irksome contingency that appeal might be made to a tribunal in some distant country of Europe or America. From these various points of view, the difficulties that lie in the way of admitting foreign shareholders before the abolition of Consular Jurisdiction, are apparent. And there is the further obstacle that many of the Companies have received their charters on the basis of rules excluding foreigners, so that an amendment in the sense of admitting them would involve application to the Government for special permission. The experiment is about to be tried, it is said, by a railway company in Kiusiu. There is, however, a precedent which seems to show that permission could not be obtained from the Authorities. It is connected with the recently established Industrial Bank. A foreigner being among the applicants for shares, stock was allotted to him, but the Government subsequently concluded that he could not be allowed to hold it without risk of serious embarrassment, and he was consequently induced to withdraw his name. The inference is that applications from

companies in the sense of admitting foreign shareholders would not be entertained by the Authorities.

The *Osaka Asahi* contains an article on the same subject from the pen of Mr. Takahashi, who, as our readers may remember, was formerly editor of that journal and subsequently became Chief Secretary of the Cabinet, which post he resigned recently. Mr. Takahashi notes the general desire among Japanese business men to invite foreign capital, and the consequent idea of making foreigners eligible to hold shares in Japanese companies. As to the latter point, there are, of course, many difficulties to be encountered pending the operation of the Revised Treaties, but the chief difficulty is that foreign capitalists do not trust Japanese merchants and would not be inclined to place money at their disposal. That is an insuperable difficulty at present and how long it may take to overcome it, there is no telling. Appreciating the fact, many publicists advocate the plan of a large foreign loan—say 200 million yen—the Government acting as borrowers and pledging the credit of the country, and the proceeds being applied to redeem the War Bonds. It appears from what Mr. Takahashi writes that this plan was mooted officially several months ago, and that its formulators then believed that a 3½ per cent. loan could be placed abroad at 90, or perhaps 88. Of course the consent of the Diet would have to be obtained. It would appear, however, that the Cabinet did not favour the project, and though Count Okuma is now understood to endorse it—we (*Japan Mail*) do not know what grounds exist for such a statement—Count Matsukata's recent Memorandum to the Merchants and Manufacturers' Union is very emphatic on the subject of all such heroic measures, and believes that their adoption would involve much greater financial confusion than that now existing. Count Matsukata's plan is to let things take their natural course. He foresees that there will be a foreign market by and by for Japanese securities, and in his Memorandum he indicates certain securities which are likely soon to find favour with Western capitalists. It is impossible to avoid the conviction—that is Mr. Takahashi's opinion—that Count Matsukata is right. A large foreign loan and the redemption of a great bulk of War Bonds would doubtless relieve the present tension of the money market and supply the capital needed for new enterprises. But it would also have the effect of materially increasing the volume of the currency, driving up prices which are already distressingly high, and disturbing the balance of trade. Altogether Mr. Takahashi supports Count Matsukata, and hints that the adoption of the gold standard must now be admitted to have been a wise and far-seeing measure, since without it the possibility of utilizing foreign capital would have been altogether remote. At the same time, he condemns the step taken by Count Matsukata six months ago in selling forty million yen worth of War Bonds to a British syndicate, for he thinks that the conditions of the sale were such as to add to the difficulties of similar sales by private individuals, and that the terms were too favourable to the syndicate.

The *Shogyō Shimpō* discusses the same subject. It notes, as beyond question, that a great dearth of cheap capital is felt and that the withdrawal of large sums of floating capital to meet the war expenditures is one of the chief causes of the present tension. From that point of view, the programme formulated by influential merchants and manufacturers appears, at first sight, eminently suited to ease the situation—namely, the programme of raising a large foreign loan and redeeming the War Bonds. But it is more than questionable whether such an operation could be successfully accomplished at present. The London money market is by no means in a favourable condition. A high rate of interest—four per cent.—is fixed by the Bank of England. In Berlin the figure is still higher—five per cent.—and in New

York, despite of exceptionally large exports of wheat and cotton and consequent imports of specie, the rate of discount is three per cent. Evidently money is not to be had on easy terms abroad at present. People seem to forget, too, that what they now propose to do on a large scale is precisely what the Government has been doing unsuccessfully on a comparatively small scale. The Government has been bringing over the Indemnity, lodging it in the vaults of the Bank of Japan, and authorizing the Bank to issue notes against it. Indeed, the Bank's note issues have now reached a sum considerably in excess of the legal limit. These operations have had the effect of cheapening Japan's gold and appreciating the price of foreign gold for Japan, which means, of course, that an undue impulse is given to imports. In fact, the Government's large purchases of drafts abroad have necessarily turned the rate of exchange against Japan. People see this at last, and are urging the Government to desist from buying drafts, yet, at the same time, they are advocating a step which would greatly enhance the same evil. The *Shogyo* thinks that the situation requires profounder thought than some folks seem disposed to give to it.

LITERARY NOTES.

George Augustus Sala, in the closing months of his life, dictated to his wife the last work of fiction that was to issue from his busy brain. It is a strange book at first sight, for among scenes of London life, the life of the upper ten, there flits a supernatural figure, a Mephistopheles, whose apparition tends to stir a sense of impatience in the practical reader. Mrs. Sala, in an interesting preface, a kind of fragmentary yet most realistic memoir of the great *litterateur*, makes a kind of apology for the appearance of this Satan, and tells us that she did not want the supernatural element introduced, but that Sala would have it so. The fact is that were this figure eliminated, the author's purpose in writing the book would disappear. He set himself to show how subtly the spirit of evil works in casting and directing the programme of extravagance, lust, dissipation and gluttony pursued by the fashionable world of our era, and he concluded that the ugly fact could be most forcibly impressed upon the perception of the reader by the occasional apparition of a personal devil. For the rest "Margaret Forster" derives much of its interest from the vivid insight that it affords into the doings and sayings of London Society. On such a subject Sala was competent—who more competent?—to write with the pen of an exact historian, and it must be confessed that his picture of the ways of the great metropolis is not calculated to enhance our admiration for the ethics of the Occident as coded in the conduct of "refined" folk to-day. Some, when they have read this book, will probably doubt whether the quiet, monochromatic existence of an Eastern treaty-port does not possess solid advantages compared with the high-pressure, artificial and thoroughly sensuous life that Sala so ably depicts. As for Margaret Forster, the heroine, charmingly as she is painted and attractive as are the vivid lights and deep shadows of her character, one is perplexed to think how a girl coming from Australia after she has emerged from her teens, a girl whose youth has been passed among colonial people and colonial ways, can suddenly make her *début* upon the London stage, and not merely adapt herself to her new environment but develop from the very outset a strong affinity with fashions and habits virtually strange to her. However, that wonderful versatility, that ready capacity for steering clear of solecisms under the most trying social conditions, belongs to most women. Men seldom, if ever, possess it. Sala has dared a great deal in his portraiture of "Margaret" but his success is correspondingly great. The book will certainly be very popular.

The besetting difficulty of writers of fiction now-a-days, the difficulty of finding something novel to write about, has been cleverly surmount-

ed by the author of "Those Dreadful Twins." He makes the little lads "Bosen" and "Middy" tell their own adventures, and so capitally are the characters sustained throughout, that, aided by delightful pictures of the twins at various epochs of their career, the reader gets to know them and love them as though he had actually passed a month in their society. The sayings and doings of two boys of nine may seem trivial subjects to offer to the reading public, yet we venture to predict that any one who takes up this volume will find it much too entrancing to be easily laid aside. "Bosen" and "Middy" are just two physically and morally healthy English lads. Nothing remarkable happens to them. They have not anything extraordinary to tell. In fact, if we come to analyse the book, its only noteworthy point is that neither of the lads ever acts from an evil motive. All the mischief that they do, all the scrapes that they get into, have their origin in the most innocent and childish conceptions. It seems probable that the author's object was to emphasize that fact; to show how necessary it is to be careful in considering the doings of children, lest, by misconstruing their sentiments, injustice—than which nothing so fatally warps a child's disposition—be constantly perpetrated. "Middy" and "Bosen" are never bad, though they often bring about situations which would turn the mind of many a roughly judging parent to that most abused of all precepts, "spare the rod spoil the child." We do not know who the author of this chapter of their biographies may be. He conceals his name, of course, adhering to the fiction that the twins themselves are the writers. But he must be a man with a deep insight into the hearts of children, and a profound love for "the angels of God in disguise."

Edward John Trelawny was one of the turbulent, ungovernable Englishmen who, in all eras since the days of Elizabeth, have found the United Kingdom too small for their "sovereign instincts," and have sought broader fields of action beyond the seas. It is characteristic of these adventurers that, while objecting strenuously to every form of control exercised against themselves, they are eminently masterful in their dealings with others. With the principles of liberty on their lips, their own conduct is guided by the most uncompromising canons of tyranny. Many of them contributed materially to the building of the British empire. Trelawny, however, was not one of these. He was simply a species of soldier of fortune, passing from country to country in search of fighting, plunder and glory, and finding the restraints of civilized society intolerable. Some of the lustiest years of his life were spent in the East—Java, China, India, the Malay Peninsula, and so on—and this part of his career is embodied in the "Adventures of a Younger Son," which has just been reprinted by the well-known publisher, Mr. T. Fisher Unwin. We can only say of it that it is a volume filled from cover to cover with exciting adventures, and that, though Trelawny doubtless employed his imagination actively to embellish his stories, there is sufficient truth to render the book highly interesting.

FIRE AT YOKOHAMA RAILWAY STATION.

A MILLION YEN BLAZE.

On Wednesday night, about 11 o'clock, fire broke out in a warehouse at the Yokohama Railway Station and quickly spread to the adjoining storehouses, which were nearly all burnt to the ground, together with the accumulation of goods stored within them. The loss suffered by delivery companies and owners of the goods is estimated to be very great; it is said not less than a million yen, much silk, rice, *saké*, etc., being destroyed. The flames were subdued after about one hour and a half. Besides the goods destroyed by fire or water a large quantity were stolen. The origin of the fire has not been discovered, but is thought to have been the result of a coolie lighting a fire to warm himself, in the immediate vicinity of some alcohol.

CHRISTMAS.

We wish our readers a merry Christmas and many happy returns of the day. It must be confessed that some among us can not see this festive season approach without misgivings as to the things that the immediate future may have in store. Even as we write, a majority of the Japanese people are talking earnestly of a war between the Great Powers, England on one side and France, Germany and Russia on the other. It is, indeed, a pleasant contribution to our pride in the old country as well as a significant answer to those that aver the decadence of British prestige, to know that, according to the estimate of the Japanese, the Union Jack could hold its own against the Tricolour and the two Eagles, so long as the struggle was confined to the Far East. But much more consolatory is the conviction that no real danger of such a terrible conflict presents itself, for the moment at all events. More, however, can not be said. Materials for trouble are certainly beginning to accumulate, and it is humiliating to be obliged to admit, as we hang up the mistletoe at this very late epoch of the nineteenth century, that our much vaunted civilization never before presented itself so strikingly in the likeness of a ravening beast. The gospel of this Christmas is not glad tidings of peace on earth and good will among men, but a gospel of international pillage universal preparation for battle. Civilization grows more civilized, but the methods of its propagandists remain at least as barbarous as ever. Truly "with trembling fingers do we weave the holly round the Christmas hearth."

FUNERAL OF MRS. H. F. ARTHUR.

The funeral of Mrs. H. F. Arthur, whose untimely death after barely three months of married life, has drawn forth universal expression of sorrow from the foreign community of Yokohama, took place on Tuesday morning. The first part of the mournful ceremony was performed at Christ Church, where the Rev. E. Champneys Irwine, M.A., officiated. There was a large attendance at the Church. Afterwards the procession was formed and proceeded to the Cemetery where the concluding rites took place. The coffin was covered with beautiful wreaths testifying in an eloquent manner to the sympathy felt for the young wife's early removal from our midst. The pall-bearers were:—Messrs. A. M. Delf, Dr. C. H. Hall, J. H. Boag, A. Unger, W. S. Stone, and F. L. Elliott. Amongst those who attended the funeral and at the graveside were:—Messrs. J. Komori, E. C. Fox, M. L. Ellis, C. H. Bain, G. Morton, L. D. and V. E. Abraham, J. Tornoe, S. Ackman, A. R. G. Clarke, C. F. Heinlien, E. W. Brown, J. G. Doering, E. Adet, C. E. Miller, Dr. Munro, F. W. Thomas, R. C. K. Johnson, etc. Those who sent wreaths were:—Messrs. C. T. Benny, H. Dare, A. R. G. Clarke, A. Unger, C. F. Heinlien, W. S. Stone, E. W. Brown, L. Eppinger, J. H. Boag, W. L. Keane, H. Rose, J. H. Rosenthal, D. E. Simon, H. A. Poole, H. J. Ginn, J. Morion, G. W. Bramhall, J. G. Doering, E. Adet, C. J. Strome, E. T. Osborn, E. V. Thorne, Dr. C. H. Hall, A. M. Delf, M. Russell, F. P. Solomon, J. Martin, L. D. and V. E. Abraham, Mrs. C. M. Bramhall, Messrs. F. C. Jackson, F. L. Elliott, J. Tornoe, S. Isaacs, E. C. Fox, Dr. A. G. Smith, G. T. Marsh, and A. Manley. Many ladies were present at the graveside.

Twenty-six thousand dollars are to be spent on the erection of a British Consulate at Chungking, and \$85,000 on a summer residence for the British Minister at Peking.

COUNT OKUMA ON FINANCE.

"The embarrassment in the field of finance," Count Okuma is represented as saying to one of the staff of the *Tokyo Asahi*, "is a result of the war with China, and will not terminate until the Indemnity has been finally disposed of. We have heard much talk lately about an excess of currency. Many people are disposed to attribute to that cause the great appreciation of prices now experienced. But I am unable to perceive that the currency is redundant. There were 150 million *yen* of paper in circulation in 1887, and since that time not only has the population increased by seven or eight millions, but a considerable addition has been made to the empire. It does not seem that three hundred million *yen* is too large a circulation at present. Neither do I see that there is any occasion to adopt means of collecting the money in circulation for the purpose of converting it into capital. Signs are already apparent that the consuming power of the provincial districts is weakening, and the factories are beginning to reduce their output. In Yokohama and Kobe quantities of imported goods are stored and no markets can be found for them. Appreciation and depreciation of prices are produced by the working of natural economic laws. There is no occasion for artificial interference. The condition of economic society to-day may be compared to that of a fever-stricken patient. When the fever subsides, weakness sets in. The fever of industrial enterprise caused by the war has now begun to abate, and there is a sense of general enervation. With regard to the proposal for redeeming War Bonds in order to create a supply of floating capital, it certainly has something to recommend it. But the fact is that the Bonds originally subscribed for by productive manufacturers have already left the hands of the latter, and been scattered here and there, so that their redemption would not add anything to the store of available capital. Moreover, although so much is said about scarcity of capital and tightness of money, an examination of the reports of the various banks shows that nearly every one of them has a larger capital now than it had before the war. Evidently the lack of capital now felt is not attributable solely to the War Bonds. At the same time, the Government would not be performing its duty if, on the pretext that business men have brought the trouble on themselves, it took no action whatever. Some measure of relief ought to be adopted. Perhaps the best and most feasible would be to sanction a further issue of notes over and above the legal limit. According to present indications, the extra issue will amount to 40 million *yen* before the end of the year, and if additional issues be sanctioned, there will probably be apprehensions lest the prices of commodities should be forced upward still more. But in truth what has to be rather feared is a rapid and general depression of prices by and by owing to trade stagnation. I greatly question whether the Premium Bonds which there is talk of issuing will achieve the purpose contemplated by their projectors. In the ordinary course of financial events the Government has to float a domestic loan of over 40 million *yen*, and if, in addition, Premium Bonds of small denominations are to be put upon the market, the

prizes falling to the Bonds successful in the lottery will have to be very substantial in order to constitute sufficient inducement. Certainly if the proceeds of the sale of these small bonds are to be applied to redeeming War Bonds, the number of subscribers for the former will have to be very considerable. The post-bellum embarrassment may not yet have reached its acutest stage, but I am confident that a healthier state of things will supervene before long. Finally, as to the introduction of foreign capital, I regret to say that without a Government guarantee the thing is impossible. The credit of Japanese merchants is not yet sufficiently established. There is nothing for it but to reconcile ourselves to that fact."

THE SENDAI BURGLARY.

People that have been perplexed—and there are many such we imagine—to understand the strange phases of the Sendai burglary, recently reported in these columns, will welcome the explanation now furnished by the Secretary of the Reformed Church Mission whose letter we publish elsewhere. The facts of the case, as originally communicated to us, though substantially correct, seem to have invited misapprehension owing to a somewhat defective form of phraseology used when referring to the transfer of the Mission's books by Mr. Hoy to Mr. Schneder. Our account suggested that the loss of the money could no longer be concealed when the time for handing over the books came, and suggested also, inferentially, that concealment had been possible up to that time owing to the accounts' not being subjected to careful audit at fixed periods. Mr. Noss shows that all such hypotheses are unjust and incorrect; that, in point of fact, the loss having been made good by Mr. Hoy himself, no indication of it appeared in the accounts; that the transfer of the books did not necessitate any departure from the silence hitherto observed by Mr. Hoy; and that the auditing of the accounts was always performed carefully and regularly. It is our duty to note these corrections explicitly and in detail so as to correct the false impression for which our language was responsible. As to Mr. Hoy's reasons for hiding the loss and taking its heavy burden on his own shoulders, the chief motive seems to be clearly indicated by Mr. Noss. Mr. Hoy was engaged in carrying on a work the inception of which had been due almost entirely to his own exertions, more or less in opposition to the opinion of the Church to which he belongs. He had obtained the required funds with difficulty, and he must have felt that their loss by burglary would, if reported, be a death blow to the whole project. It was a cruel dilemma. Discussing it quietly at this distance of time and entirely removed from the influences that swayed him, we do not venture to pronounce any judgment on his procedure. There is, of course, the abstract fact, not to be gainsaid or minimized, that to conceal such crimes is a violation of public duty. Burglars who break into houses with drawn swords in their hands, are a danger to society, and no man is justified in conniving at their escape from the pursuit of justice. On that count Mr. Hoy was wrong, but we are not without appreciation of the difficulty of his position or of the sacrifice that he made.

THE RUSSIAN SQUADRON.

Peking, 2 p.m., 18th December.
Several vessels of the Russian Pacific Squadron have suddenly entered Port Arthur. The purpose of the movement is not yet known here.

The above telegram was received on the 19th instant by the *Fiji Shimpō* from its special correspondent in Peking, and published in an "extra." The same journal, in its morning number, gave a telegram despatched from Nagasaki on the 18th instant, saying that the Russian ships, nine in number, which had hitherto been lying there, went out of port that day for a destination unknown to the public. Evidently these nine ships could not have been part of the squadron referred to in the Peking telegram, but possibly they also were bound for Port Arthur. The ships spoken of in the Peking telegram must have entered Port Arthur on the 17th, or the 18th at latest, and the Nagasaki ships could not reach that place before the 19th or 20th. Prior to last winter, the habit of the Russian Pacific Squadron was to winter in Japanese ports, the bulk of them making Nagasaki their head-quarters. Last winter, however, Nagasaki ceased to be so largely frequented, several of the ships being distributed between Chemulpo and Kiao-chou. It might be supposed that since Kiao-chou is now monopolized by a German squadron, Russia has adopted Port Arthur as an alternative. But such a measure must, of course, have been preceded by some arrangements with the Chinese Government, and the Peking telegram re-produced above says that the object of the ships' entry into Port Arthur was unknown in the Chinese capital. The *Fiji Shimpō* suggests that the movement may be interpreted in one of three ways, namely, as part of a coöperative plan with Germany and France for the partition of northern China; as an offset to the activity said to be displayed by the British squadron; or as a demonstration against Germany's proceedings at Kiao-chou. We think that the two latter suggestions are untenable and that the first is incredible. On the other hand, we are not prepared with any working theory to fit the facts, supposing them to be indeed facts. Of course, if an English squadron is at Sam-sha, there is no particular reason why a Russian squadron should not be in Port Arthur. It will probably occur to a good many persons who set themselves to interpret the present situation, that Japan is dreadfully in the way at Wei-hai-wei. Will she stay there?

SECRET FUNDS.

The *Mainichi Shimbun* alleges that whereas the sum allowed by the Diet to the Cabinet as a secret service fund is only thirty thousand *yen*, the Imperial Household Department supplements that amount by a hundred thousand yearly. In times of peace, our contemporary goes on, the Cabinet having no special uses for the money, employs it for the purpose of establishing relations with political parties or bribing members of the Diet. But it has now been entirely expended, and there is need of two hundred thousand *yen* to enable the ministry to get over the next session of the Diet peacefully. We do not know how this story will be received by the Japanese public, but to us it sounds perilously like an attempt to connect the Household Department with dishonest practices.

FOREIGNERS AND JAPANESE SECURITIES.

There is a good deal of desultory talk just now about the expediency of allowing foreigners to purchase shares in Japanese companies. The general tendency is evidently in favour of removing all restrictions, to the end that foreign capital may be attracted to Japan. We observe with some surprise that the subject is treated as though it were novel, whereas it has often been discussed from one point of view at any rate. Time and again foreign local journals have charged the Japanese with pettiness and illiberality because they did not place their railway shares and so forth within reach of foreign investors, and time and again it has been pointed out, by way of reply, that so long as Treaty Limits exist and so long as trade beyond them is interdicted to aliens, foreign ownership of such securities would be illegal. For, most unquestionably, any person holding shares in a railway that runs beyond Treaty Limits, or in a tramway company, or in a factory situated in the provinces, must be considered to be trading in the interior. If it be lawful for him to own shares, it must be lawful for him to exercise the functions of a shareholder and take part in the control or supervision of the company's business, which means that he would be trading beyond Treaty Limits. Moreover, he would not be amenable to Japanese law in respect of violations of the company's regulations, or of acts exposing him to claims on the part of Japanese subjects doing business with the company. Hence the discussion now taking place, as to whether the share market generally should be thrown open at once, must be counted premature. Nothing of the kind can be accomplished until Consular Jurisdiction is abolished. Another thing is quite certain, namely, that foreigners before becoming shareholders in any company will want to have a voice in the management of the company's affairs. Without that, they will never invest to any considerable extent. Whether the ownership of shares does not involve part ownership of all a company's property—land, buildings, machinery, and so forth—is another question that has to be considered.

THE YORO-IN.

The letter from Mr. J. Cooper Robinson, which appears in our correspondence columns, is interesting not merely for its own sake but as showing the spirit of charity that pervades the foreign community of Yokohama. That men like Mr. Robinson are to be found in no small number, men that devote their lives to acts of benevolence, is happily a truth with which all are familiar. Moreover, at times of public calamity or wide-spread disaster, the lists of subscriptions contributed by the foreign communities in the Settlement indicate a disposition truly worthy of praise. But in this story of the *Yoro-in* at Nagoya we catch a glimpse of an under-current of charitable effort which flows silently and unostentatiously, carrying to the unfortunate succour and comfort of which the donors and the recipients are alone cognizant. The "Four Girls" and their "fair" suggest the outlines of a beautiful picture whose details imagination delights to fill in.

THE HAWAIIAN QUESTION.

The *Hawaiian Annual* for 1898 gives a *précis* of the complications that occurred last year in connexion with Japanese immigration. According to the writer of the *précis*, the whole question turned on the *bonâ fides* of the immigrants' possession of fifty dollars each. He alleges that at first the immigrants were all contract labourers, but that several thousands were subsequently brought over by Japanese emigration companies which lent each man fifty dollars to show to the Hawaiian Authorities on landing, in order that he might qualify for admission as a free labourer, the money being returned immediately afterwards to the lenders. The Hawaiian Government, he goes on to say, becoming aware of this fraud, subjected the immigrants to a strict scrutiny, and finding that only a small percentage of them were *bonâ fide* owners of the regulation sum, summarily refused to allow the others to remain. It may be assumed, we suppose, that the version contained in the *Hawaiian Annual* is the version generally accepted in Hawaii, and if that be so, the Hawaiians are doubtless convinced that Japan is wholly in the wrong. But the facts as they appear from the official correspondence, are very different. The Hawaiian Government based its action in sending away the immigrants, not on the *mala fides* of their monetary qualification, but on the allegation that while professing to be free labourers, they had in reality come under contract, their contract being with the Japanese Emigration Company which provided a steamer to bring them over. The mere fact of coming under contract would not have disqualified them, of course; but Hawaiian law requires that such contracts shall receive the endorsement of the Hawaiian Immigration Authorities before being implemented, and no endorsement had been sought in the case of these particular Japanese. It was an extraordinary position for Hawaii to take. The contract contemplated by Hawaiian law is a contract between the labourer and the planter into whose service he is about to enter. The contract between the rejected immigrants and the Emigration Company was a contract relating solely to their return passage in the event of their failure to find employment. It did not concern the Hawaiian Authorities in any way, except that it furnished an additional guarantee against the contingency which the Immigration Law was specially framed to avert, the contingency of an immigrant's being left without employment, sustenance or means of leaving Hawaii. We have never been able to comprehend how the Hawaiian Government expected to find in such a plea any solid basis for its action. That, however, was the basis that it selected. Not until long after the event, not until the rejected immigrants had returned to Japan and dispersed to their houses—so that any intelligent investigation of their pecuniary circumstances at the time of their landing at Honolulu had ceased to be possible—did the Hawaiian Government supplement its original contention by a reference to the *bonâ fides* of the men's possession of fifty dollars. Naturally Japan declined emphatically to entertain that belated plea. Hawaii was in fact playing fast and loose; at one moment calling the men contract labourers and challenging their qualifications as such; at another, calling them free labourers and impugning their quali-

fications in that character. The *Hawaiian Annual's* version is evidently based on mere hearsay.

TOKYO LITERARY AND MUSICAL SOCIETY.

The Tokyo Literary and Musical Society met on the evening of the 18th instant in the Hall of the Parish Building, Tsukiji. About fifty members were present. His Excellency the United States Representative presided, and called upon the special committee appointed at the previous meeting for the purpose of compiling rules, to present its report. The Committee submitted a draft of the rules, and after a brief debate they were endorsed by the meeting with some trifling amendments. It is unnecessary to publish the rules in detail, but we may explain that their chief provisions were that the Society should have a President, two Vice-Presidents and a Standing Committee of nine—not less than four of the latter being ladies—, elected annually; that all the business of the Society should be entrusted to the standing Committee, and that the meetings should be every alternate Monday. His Excellency Colonel Buck was elected President, and for Vice-Presidents the choice fell upon Mr. Von Treutler, German *Chargé d'Affaires*, and Captain Brinkley. This business concluded, the following programme was performed, each of the pieces being rendered most successfully:—

Pianoforte Solo Polish Dance
Miss Schereschewsky.
Recitation The Rivals..... Miss Spencer.
Double Duet, "Merrillie Singing"..... Mrs. Wadman,
Miss Allen, Miss Spencer, M. S. Garst.
Violin Quartette..... "Cavalleria Rusticana"
The Misses Page and Mr. Noel Page.
Recitation..... "Love in a Balloon"..... Miss Spencer.

"ENFORCEMENT."

The *Japan Times* is "at a loss to understand the importance which seems to be attached by our Yokohama contemporaries to the word 'enforcement' as applied to the operation of treaties in this country." Well, indeed, may our Tokyo contemporary be surprised. This affair, utterly paltry in itself, has furnished a striking example of the almost phenomenal disingenuousness of certain Yokohama newspapers. They themselves, finding the term "enforcement" in a clumsy translation made by their own *employés*, wrote paragraphs complaining of the spirit displayed by the use of such a word. The Japanese Government, they said, had appointed a committee to make preparations for "enforcing" the Revised Treaties, from which it might be inferred that the unfortunate foreigner was to be mercilessly forced to implement his bad bargain. We pointed out that the Japanese word translated "enforcement" had no such significance as that assigned to it: it meant merely "putting into operation." At that one of the journals in question turned round and asked why on earth the *Japan Mail* was making a fuss about a term: the Treaties would have to be put into force any how, and there was no occasion to discuss forms of expression! Very candid and consequential, is it not? It reminds us of the vagrant who, being detected by constables as he was on the point of setting fire to a cathedral, complained that one could live quite comfortably were it not for those confounded bobbies.

"GREAT JAPAN."

We observe that what we wrote about the expression "Great Japan" has given rise to some misunderstanding. The *Japan Times* concludes that we interpret the name to be that of the main island only, as distinguished from the smaller islands forming part of the Japanese empire. Perhaps we wrote loosely, not deeming it necessary to guard against an interpretation obviously so untenable. Our meaning was that the use of the word "great" (*dai*) probably had its origin in a desire to distinguish the main island from the adjacent islets. Ultimately, as every one knows, the term *Dai Nippon* came to be applied to the whole group of islands, but the question of interest is, how and whence did the prefix "great" originate. Was it a geographically distinctive prefix, or did some one conceive the idea of using it for the purpose of glorifying Japan? We have no information bearing upon the question, but have always supposed that the employment of the prefix was suggested by the comparatively large size of the main island, and that, as time went by, the logic of the term became obscured by the habit of employing it.

The *Japan Times* says that the prefix "Great" (*Dai*) was originally adopted in the case of this country because the Chinese sovereigns, in their official communications to the Japanese Court, always described their dynasty as the "Great Sung," or the "Great Tsing," and so on. The Japanese, according to our contemporary's view, deemed it essential to the preservation of the national dignity that a Rising Sun Rowland should be given for the Celestial Oliver, and so they called their country "Dai-Nippon." That is a very interesting but not a novel suggestion, probable enough on the face of it. Of course, our idea as to the geographical origin of the prefix *Dai* was purely conjectural. It seemed not unlikely that as the island of *Nippon* received the distinctive appellation *Hondo*, or "main island" so it might ultimately have come to be called *Dai-Nippon*, or "big Nippon," in contradistinction to the very much smaller islands—as *Kiushu*, *Shikoku*, *Yezo*, *Tsushima*, etc.—that were incorporated with it in the empire of Japan. The *Japan Times* calls our suggestion "a fantastic theory propounded in a moment of thoughtlessness." It may be fantastic. As to that the public can judge. But it certainly was not "propounded in a moment of thoughtlessness." We have never discovered in early Japanese history any evidence that bears out the derivation which our contemporary now endorses. Chinese annals, exceedingly scrupulous as to the etiquette of names and titles, do not fail to note the styles adopted by foreign potentates in addressing the ruler of the Middle Kingdom. They take careful account of the fact that the Emperor Mōmū—or Wen-wu, as they call him—named his reign *Tai-ho* (*Ta-pao*), but of course readers of Japanese history are well aware that the term *Tai-ho* was adopted on account of the discovery of precious metals in Japan, and not with any idea of exalting the rank of the State. It seems difficult to believe that if the Japanese had adopted the honorific *Dai* merely as a set-off against the Chinese *Ta*, no explicit notice of the fact should be found in the annals of either empire. Such a notice may, indeed, exist, and the editor of the

Japan Times may be acquainted with it. If so, he would place the public under an obligation by stating the reference. Meanwhile, we admit that his theory is very plausible, and that it derives force from the recent action of the Koreans, who signalized the elevation of their petty Kingdom into an empire by adopting for it the title of *Tai-Kan*. In short, this hypothesis amounts to saying that *Ta*, *Dai*, or *Tai* has the significance of "imperial" or "royal" rather than that of "great" when used as a prefix to the name of a country.

THE BUDGET FOR 1898-9.

The Budget for next fiscal year, taking the appropriations for the Departments at the figures originally sent in to the Finance Minister, totalled ~~258,830,000 yen~~, according to the *Fiji Shimpō*. From that amount the Minister cut off 28,610,000 yen, reducing the total to 230,220,000 yen. Owing, however, to vehement complaints preferred by the various Departments, it was finally decided to restore 3,953,000 yen, so that the ultimate figure stood at 234,170,000 yen. The greater part of the restorations was on account of public works, but some was for increases of salaries and of staffs. Additional outlays on these latter accounts are, of course, certain to be severely criticized, and the Finance Minister was most unwilling to make any appropriations for them. But the Departments concerned made offer of a compromise, cutting down their outlays under items of new enterprises provided that the Minister agreed to the proposed increase of Administrative expenditures. It is most unlikely, however, that the Diet will consent to any increase of the kind, its normal outcry being for economy in that very direction. Hence the Departments may look forward to getting neither the blue-bottle nor the bee, as the Japanese proverb has it.

COUNT MATSUKATA.

If we may credit a story told by the *Nippon*, Count Matsukata has again been the recipient of advice pointing to his resignation. On this occasion the advisers are said to have been Baron Iwasaki, Mr. Oishi Masami and another. They proceeded to the Premier's house on the 15th inst., and told his Excellency that popular opinion being now irrevocably unfavourable to him, and the attitude of foreign Powers towards the Far East being such as to cause much uneasiness, nothing could be more unfortunate for his own reputation as well as for the national interests than to provoke a fruitless conflict with political parties. They therefore urged him to resign. Count Matsukata is represented as having betrayed symptoms of great regret and as having indicated his sense of the mistakes committed by Count Kabayama and Viscount Takashima, to which he attributed the present embarrassing state of affairs. He declared his determination to refrain hereafter from manœuvring with political parties; to submit his policy in a straightforward manner to the Diet, and to resign at once if he found a majority opposed to him. It appears to us that the *Nippon*, in constructing this story, has travelled very far beyond the limits of public credulity.

LEGATIONS IN TOKYO.

The new Legation of Austria-Hungary in Tokyo is rapidly approaching completion. It stands inside the Yotsuya gate in Kioicho, just opposite the residence of his Imperial Highness Prince Kacho, commanding a beautiful prospect in every direction and occupying one of the most eligible sites in Tokyo. Until the scaffolding is removed, the ultimate appearance of the building is difficult to judge, but the proportions suggest a fine structure, of an aspect at once handsome and pleasing. Mr. Conder is, we believe, the architect, and he seems to have been as successful as he was with the German Legation, completed a few months ago. It may now be said that the Representatives of Great Britain, Germany, Russia, Italy, and Austria-Hungary are worthily housed in the capital of Japan. France has a good though not an elevated site, but has hitherto been content with a building which, having been designed originally for the residence of a private Japanese gentleman, falls somewhat short of the standard of a Legation. She will doubtless redress the balance before many years. Spain possesses an excellently situated plot of land—at the back of the Peeresses School—but it may be presumed that the stupendous financial efforts which she has recently been obliged to make on account of military affairs, do not leave her much leisure for legation-building in the Far East. The Brazilian Minister has been eminently practical. Unable to find in Tokyo any private house capable of accommodating his family and his staff, he appropriated the whole of the Tokyo Hotel, and by a few dextrous changes, converted it into a suitable, though of course a very-far-from-picturesque, domicile. It is a pity that some one does not deal similarly with the Imperial Hotel. Its principal achievement at present is to create among foreigners a conviction that the Japanese are a thrifless people, without organizing capacity or intelligent observation. As for the Legation of the United States, the tardiness of the Washington Government to provide a suitable building is becoming a subject of public comment. The site is spacious and admirably situated, but the house is a wooden structure of the flimsiest description. Hastily run up and roughly put together at the outset, the passage of years has deprived it of its only title to respectability, newness, and it is now a veritable eye-sore, as ugly as it must be uncomfortable. It can never have been intended to be anything but a very temporary structure for it is huddled away in the southerly corner of the grounds so that the principal rooms face west and north, aspects almost unendurable for a residence in the climate of Japan. Such an extraordinary situation must have been chosen solely for the purpose of leaving the northerly side of the grounds available for building operations, but as year follows year without any sign of an attempt to build, the whole thing is growing quite a jest. We must say that considering the immense wealth of the United States and the magnitude of American interests in Japan, the Government's carelessness in this matter is unaccountable. The consulate-general in Yokohama is a poor enough affair in all conscience, but the Legation in Tokyo is incomparably poorer, and even as Englishmen we do not like to see the stars and stripes floating over such an edifice.

POLITICAL NOTES.

Naturally on the eve of the Diet's meeting considerable excitement prevails in political circles. The 24th instant at 10.30 a.m. has been fixed for the ceremony of official opening. On the 21st instant the Houses came together for purposes of organization. Out of the full membership—316—of the House of Peers 242 assembled, and out of the 300 members of the Lower House, 255. This work of organization, as our readers may probably remember, consists in dividing the members into sections and electing heads of sections and secretaries—arrangements which have reference solely to the convenient discharge of business during the session. After the opening ceremony on the 24th, the only work done will be the preparation of replies to the Speech from the Throne. On the 25th, the Standing Committees—the Budget Committee, the Disciplinary Committee, and the Petitions Committee—will be elected, after which the Houses would rise, under ordinary circumstances, for the New Year's recess, coming together again on the 10th of January. But the question now asked is, will the Opposition insist on introducing a vote of want of confidence before the New Year's recess, or will they postpone the step until afterwards. According to present appearances they will force the measure to the front at once. Indeed, the only doubt seems to be whether the resolution shall be brought forward before the Standing Committees are elected, or whether the more regular course would not be to take it when the elections have been concluded. The Progressionists are said to be in favour of the former plan, whereas the Liberals, or some of them at any rate, advocate the latter. In any case it seems tolerably certain that the measure will be proposed. But will the Government allow the House to divide on it? That is the next point of uncertainty. Hitherto these attempts on the part of the Opposition to obtain a vote of want of confidence or to pass an Address to the Throne impeaching the Cabinet, have generally been staved off—unless their rejection appeared certain—by an order of suspension, followed by a sentence of dissolution if the Opposition finally insisted on carrying the question to a division. The idea of temporary suspension is to give the House time to calm down and reconsider its course, just as a recess may be taken during the progress of an ordinary sitting for the purpose of allaying undue excitement. But it is alleged that, on the present occasion, the Opposition want to turn the tables. That is to say, instead of being forestalled by the Cabinet and sent home to their houses and inns for an interval of cool reflection, they wish to assume the position of pronouncing judgment on the Ministers and sending them home, so to speak, to their official residences for a period of quiet thought. According to this latter programme, the House of Representatives, instead of rising for the New Year's recess, would suspend its sitting until the conclusion of the period of mourning for the late Empress Dowager, namely, January 11th, declaring, at the same time, that the purpose of the suspension was to enable the Cabinet to consider its position—*i.e.*, to resign—failing which form of "consideration," the House would pass an Address to the Throne on re-assembling. In order to prevent any intervention

on the part of the Government, the plan of the Opposition, it is said, is to press the hostile resolution to a division immediately after it is read, but, of course, that is not feasible. There will always be time for the Government to intervene, if it pleases to do so.

Meanwhile, there is the usual talk of a union of the two great political parties, the Progressionists and the Liberals. Opposition to the Ministry being the dominant mood of nearly all the parties, their differences of platform seem, for the moment, comparatively insignificant. But on this occasion the project is discussed with exceptional intelligence. Political leaders are warned to be careful lest they mistake consensus of destructive opinion for unity of constructive purpose, and thus form a coalition which must fall to pieces when confronted by the problems of statesmanship that the time presents. On the other hand, some of the Tokyo journals speak of a new party—the National Party (*Kokumin-to*)—as being in process of formation. We cannot attach much importance to the enterprise. The names of the projectors are those of men without reputation or influence.

The most curious feature of the situation, in our opinion, is the fact that while the parties in opposition are clamouring for the overthrow of the Cabinet, no one seems to take any thought for the resulting situation. There is simply a longing to pull down. We cannot tell, of course, on what grounds the resolution of want of confidence will be based. It has hitherto been understood that the Government's proposal to increase the taxes was one of the most prominent grounds of dissatisfaction, but if the resolution is introduced on the first day of the session, that is to say, before the Budget has come up for discussion, the question of taxation can scarcely be introduced with propriety. Be that as it may, however, it is tolerably evident that a change of Cabinet while the Diet is in session would not improve the Budgetary situation from the point of view of the Opposition. A Ministry coming into power now could not possibly draft a new Budget in time for the Diet's discussion before the 24th of March. Either the present Cabinet's Budget would have to be adopted, or the Budget of the current fiscal year would have to be repeated.

Concerning the remnant of the Codes, the passing of which is so essential to the operation of the Revised Treaties, the best suggestion yet made appears to be that of the *Shogyo Shimpo*, namely, that the Bill embodying these important laws should be submitted to the Lower House accompanied by a special message from the Emperor recommending its adoption as a matter of urgency. The House would certainly contrive to pass the measure were that plan adopted.

THE LATE MRS. SQUIRE.

Although Mrs. Squire, whose decease on the 19th instant was yesterday announced, had been ailing for some months, her death came as a terrible shock to the Tokyo community. An attack of typhoid fever towards the close of the summer was followed by lung trouble, and as long ago as the middle of October a fatal termination became inevitable. Mrs. Squire had been for several years in

charge of the ladies' college called the *Shorei-kai*, and in that capacity had won universal esteem and respect. She was a lady of very exceptional accomplishments, a noble sense of duty and untiring steadfastness of purpose. Circumstances subjected her to a test such as happily has to be endured by few of gentle nurture, but long ignorance of the uses of adversity did not impair her capacity to meet it with fine courage and to conquer it by sheer force of resolute earnestness. Her life was an eloquent lesson to the weak and shiftless. No words of ours can measure the sympathy that is felt with her young family in their grievous affliction.

The remains of the late Mrs. Squire were interred on the 21st instant in Aoyama cemetery, whither they had been followed by a large number of sorrowing friends. The first part of the service was performed at the Church of St. Andrew, the Venerable Archdeacon Shaw officiating, assisted by all the Clergy of the Episcopal Mission. An element of the deepest sadness was imparted to the ceremony by the presence of the deceased lady's children, of whom two are still of very tender years, and by the fact that Commander Squire had reached Tokyo from Canada only in time to take part in the obsequies of his noble wife, but not in time to say the last farewell, the hope of which seems to have been present with her most vividly at the end. St. Andrew's Church could barely find accommodation for the crowd of mourners, among whom the students of the *Shorei-kai* and many Japanese ladies were conspicuous. The cause of female education in Japan has sustained a heavy loss by the death of this gifted and earnest lady, and we are persuaded that her memory will long be held in grateful reverence.

THE SITUATION IN CHINA.

A telegram from Peking says that the Russian Government, before sending men-of-war to Port Arthur, had obtained China's consent to use the place as a winter station, not in perpetuity, of course, but for one season. Another telegram from Shanghai alleges, on the authority of a ship-master who recently passed in the neighbourhood of Chusan, that an English squadron is busily making preparations there—whatever that may mean. It is not easy to make out exactly where the British ships really are. Some time ago they were said to have assembled at Samsha. Then we heard of them at Hongkong, and now they are supposed to be at Chusan. Nothing seems certain except that they are keeping in the region south of the Yangtze. As for the proceedings of Russia and Germany, additional grounds for the suspicion that they are acting in concert will naturally be found in the latest news about Port Arthur. That the German Government established an understanding with St. Petersburg before the occupation of Kiao-chou must be taken for granted. Kiao-chou had been lent to Russia temporarily as a winter station, and Germany would never have seized it without coming to some arrangement with its occupant. Port Arthur is, of course, a far more desirable station, and Russia doubtless is not at all displeased to have found a good excuse for the change.

THE MITSUI BANK.

Vernacular newspapers contain references to the Mitsui Bank in connexion with the publication of its latest report. We wrote pretty fully on the subject some years ago, but it may interest our readers to be reminded that the Bank is an unlimited liability concern and that depositors are secured, not merely to the extent of the capital and the reserves, but also to the extent of the whole property of the Mitsui family. There are five branches of the well known family—Mitsui Hachiroemon, Mitsui Motonosuke, Mitsui Takayasu, Mitsui Hachirojiro and Mitsui Morinosuke. Each carries on a vast business and has great wealth. It was in the year 1675 that the family first turned its attention to commerce. Up to that time its various representatives, through successive generations, had obeyed the *samurai's* creed and stood entirely apart from everything connected with trade. Doubtless the first of the Mitsui merchants was a man of great business capacity. Probably, also, he owed something of his success to his relations with the aristocracy. At all events he built up a great connexion, being honoured with the patronage of the two Courts—that of the Emperor and that of the Shogun—and organizing machinery of wide public value for the management of financial transactions. At the Restoration the Mitsui stood easily at the head of all banking concerns in Japan, but it was not until 1876 that the now celebrated Mitsui Bank (*Mitsui Bunko*) was established to combine the business hitherto carried on by various agencies throughout the empire. Two hundred and twenty-two years is a long life for a commercial enterprise, and when we consider that throughout the whole of that time the Mitsui family, though engaging in several branches of trade on an immense scale, never once had to confront anything like disaster, and never once saw its credit threatened, we have to admit that the record is very remarkable, and that the business capacity of the family is established beyond all doubt. The last half-yearly report of the Bank contains these figures:—

	Yen.
Paid up Capital	2,000,000
Reserve	2,510,000
Public Loan Bonds, Local	
Loan Bonds and Bullion	6,960,000
Shares and Debentures	7,230,000
Deposits	25,480,000

OPENING OF THE DIET.

The Emperor is to leave the Palace at 10.30 a.m. on the 24th instant and proceed direct to the House of Peers. All those invited or entitled to be present are to assemble at the House of Peers by 10 a.m. at latest, wearing full uniform or tail coats. They are required to leave their over-coats, umbrellas, &c., in their vehicles, to alight from and dispose the latter as directed by the officials in waiting, and to present their cards—bearing not only their names and official rank but also a statement of their decorations, if any—at the vestibule of the House of Peers. The persons entitled to attend without invitations are, holders of first-class Orders, Peers of the Musk and Golden Pheasant Chambers, foreigners ranking as *Choku-nin*, holders of third-class Orders and upwards, *Sonin* officials from the fifth-class upwards.

GERMANY AND CHINA.

The newspapers received by the last Canadian mail place us in possession of the sequence of ideas and events in Germany from the time of the receipt of the news of the missionary murder in southern Shantung until the occupation of Kiaochow by a German squadron. As this incident seems likely to rank among the most extraordinary in the annals of international procedure, it will be interesting to trace briefly the attitude of German opinion towards it. Intelligence of the murder of the missionaries was, of course, telegraphed to Berlin without delay, but at first it seems to have been received with incredulity so far as the general public was concerned. The Government, however, acted with remarkable promptitude. On November 7th, the following news was telegraphed from Berlin to *The Times*:—

After having been semi-officially discredited, the news of an attack on German missionaries in the south of the Shantung province has now been confirmed by official despatches. The mission station of Yen-chan-fu was assailed, a missionary named Nies was murdered, and another named Ziegler is reported as missing. A third inhabitant of the mission station named Stenz escaped. It is announced that "the measures demanded by the situation have been adopted by the German Government." As a German cruiser division is at present in Chinese waters, the *Berlin Neueste Nachrichten* thinks it opportune to insist that "a pledge for the fulfilment of the German demands for reparation should immediately be seized." The reference is doubtless to the long cherished German project of obtaining a coaling station in China, with regard to which, by the way, contradictory rumours have lately been current in Berlin, asserting and denying that the acquisition has already been effected. The journal just quoted urges that "the present occasion is one on which the despatch of so strong a section of our small fleet year by year to Chinese waters should at last be justified by action."

The point of chief importance in the above is that, as early as Nov. 7th "the measures demanded by the situation had been adopted by the German Government." Now on Nov. 7th the German Representative in China was travelling in the Yangtze valley. On Nov. 9th he returned to Shanghai from Hankow; and on Nov. 8th, or, at latest, Nov. 9th, the German squadron of three ships, then lying at Woosung, was ordered to hold itself in readiness to proceed to Shantung. In view of these dates, it is at least certain that the occupation of Kiaochow was contemplated by the Berlin Government before any intimation had been received of the attitude that the Peking Cabinet would be likely to assume towards the affair.

From Nov. 7th to Nov. 15th, the affair does not appear to have evoked further comment from the Berlin public. The German ships, it will be remembered, left the mouth of the Yangtze (Woosung) on the morning of the 12th and the occupation of Kiaochow was effected on the morning of the 14th. The following day—Nov. 15th—the Berlin correspondent of *The Times* telegraphs:—

The intelligence that the German cruiser division in East Asia has received orders to proceed to the coast of Shantung, in which province German missionaries were recently murdered by the natives, and to demand immediate satisfaction, continues to call forth comments and suggestions in the organs of the Central party. The *Berliner Neueste Nachrichten* finds that the great Bay of Kiaochow, on the south of the Shantung Promontory, "would afford an excellent point d'appui for the German fleet in East Asian waters, and has, in fact, long been regarded by German commercial circles in China as a worthy object of German ambition." The journal just quoted asserts that as

English interests lie further south and Russian further north, the German occupation of the bay need not affect them. Besides, after all, Germany did not join France and Russia in settling the differences between China and Japan in order to strengthen French or Russian interests, but rather to promote her own. "These can only be secured by the occupation of a harbour suitable for the German mercantile marine and the navy in East Asia." Further delay will only serve to diminish German prestige in China. And if other Powers should object, it is the duty of Germany to remember that she has too long paid consideration to the claims of others and that it is high time for others to recognize her legitimate aspirations.

The *Post*, which states that Kiaochow is the immediate objective of the German cruiser flotilla, is not informed as to whether it is the intention of Germany to take possession of the bay, but has no doubt that in view of the recent insult to the German officers at Wuchang-fu, the Government "will press its claims against China in an emphatic manner and will also demand guarantees against a repetition of the outrages."

(THROUGH REUTER'S AGENCY.)

Cologne, November 15th.

In connexion with the recent murder of two German missionaries at Yen-chan-fu in Shantung, the *Kölnische Zeitung* this evening publishes the following telegram from Berlin:—

"The German cruiser division has landed a force in Kiaochow Bay, the nearest port to the place where the murders were committed, in order to exercise pressure on the Chinese Government with a view to obtaining early and complete satisfaction for the demands made by Germany in connexion with the murder of the two German missionaries and the destruction of the German mission station."

Here we find a leading Berlin journal frankly advocating the doctrine that because Germany has aspirations with regard to Chinese territory, she has a right to be satisfied; because she wishes for a *point d'appui* in Far Eastern waters, therefore she is entitled to possess herself forcibly of a Chinese port. It is impossible to be more ingenuously immoral. Readers will notice, too, that Germany's object in joining France and Russia to drive Japan out of Liaotung, is described to have been the promotion of interests "which can only be secured by the occupation of a harbour suitable for the German mercantile marine and the navy in East Asia." Of course it does not follow for a moment that the views expressed by a Berlin journal represent the motives of the Berlin Government's action. As to the latter, we can not speak. But a newspaper like the *Neueste Nachrichten* may be regarded as a fair exponent of intelligent German opinion, in some degree at any rate, and from that point of the index that its utterances furnish of modern international morality in Europe is instructive.

Our next batch of intelligence is dated at Berlin, Nov. 16th:—

Blue-jackets have been landed from the German cruiser division in the harbour of Kiaochow. It is semi-officially stated that the object of the occupation is "not only to enforce the claims of the German Empire against the Chinese Government in respect of the massacre of missionaries, but also to obtain guarantees for the future safety of German subjects in China."

The *Vossische Zeitung* expresses the hope that the German Government will not evacuate Kiaochow until full satisfaction is given by China for all the grievances of German subjects in that country. But it makes the alternative suggestion that the Government "should insist on obtaining the cession of the harbour as reparation for the insult to the German flag. Resistance on the part of the Chinese Government is scarcely probable. The occupation of Kiaochow appears have been effected without opposition."

The *Cologne Gazette*, however, calls to mind the fact that, according to report, the Governor of Chuli had the intention of establishing a strong naval station at this very point, which commands the southern entrance to the Gulf of Pechili. There were also at one time rumours that China had ceded Kiaochow to Russia. In any case, it appears to be somewhat unlikely that the Germans without further ado, be allowed to establish themselves there on *permanence*.

The German cruiser division now at Kiao-chou consists of the battleship *Kaiser*, the second-class cruisers *Irene* and *Princess William*, and the third-class cruiser *Arcona*. The total complement of men is 1,642. The chief in command is Rear-Admiral von Diederichs.

Commenting on a telegram from Paris which states that the negotiations between France and several Powers regarding common measures for the protection of Christians in China have had a successful result, the *Berliner Neueste Nachrichten* expresses its opinion that these negotiations are directed against the action of Germany and that the reports of their success must be received with caution.

Not only in Radical journals but also in the organs of the Clericals the view is expressed that the conflict with Hayti and the attack upon German missionaries in China are being employed in order to influence German public opinion in favour of extensive naval plans. It is pointed out, however, that there are some 31,000 German subjects resident abroad and that they are so scattered over the face of the earth that even a greatly increased navy could hardly in all cases protect their interests without great difficulties being encountered and loss of time being involved. The Clerical *Kölnische Volkszeitung* remarks:—"The further development of the navy is in no wise rejected by the nation, but it is believed that the rate at which naval estimates have been voted in the past has been rapid enough, especially during the last ten years, and that if it is maintained all that is necessary will be achieved."

A semi-official journal states that the Navy Bill will be the occasion of the opening of the Reichstag at the end of the present month by the Emperor in person. His Majesty has not been present at the opening ceremony since December 4, 1894. The recent attitude of the Government organs afforded indications that in authoritative quarters there was some hesitation about the precise form in which the claims of the navy should be advocated. The *North-German Gazette*, however, returns this evening to the charge on the subject of the defence of the German coasts. "In a future war," it says, "we must reckon absolutely with an attempt to effect a landing on the part of the enemy. The French would not in any case begin a war against us without a powerful ally. But with the aid of such an ally they do not need to reckon with our united land forces, and would therefore have troops at their disposal for employment against our coasts." The *North-German Gazette* does not think that coast defences insure adequate security. "Heligoland has great importance for the defence of the German shore, in so far as it can render the sojourn of a hostile fleet in the neighbouring waters very difficult. But the range of its guns does not embrace the coast and the mouth of the Elbe."

The reference made above to an insult to the German flag has no value. What the writer had in mind was the stoning of German blue-jackets on the occasion of the German Representative's visit to the Viceroy Chang Chi-tung, but as ample reparation was obtained for that outrage, it disappeared from subsequent consideration.

On Nov. 17th, the Berlin news takes this form:—

Arguments continue to be marshalled in favour of a permanent occupation of Kiao-chou by Germany. The *Kreuz Zeitung* has no manner of doubt that satisfaction for the outrages on German subjects must be found in the seizure of some point on the coast "which will serve as a permanent harbour of refuge and a coaling station. This is an excellent opportunity to do what ought to have been done long ago." The *National Zeitung* accuses The Times of inciting Russia against the plans of the German Government and of hinting that England, in the event of their realization, would transfer her sympathies to China. But the *National Liberal* organ consoles itself with the reflection that Germany would never in any case be able to count on English sympathies in East Asia.

In some quarters the statement published by the *Cologne Gazette* on Berlin authority that a landing had been already effected by the German fleet is treated as open to doubt. The *Imperial Gazette* did not publish the telegram which sent back the intelligence from Cologne. It is furthermore pointed out that the Government of China has not, so far as can be ascertained, refused to give the satisfaction demanded; nor is the place of landing sufficiently near the scene of the outrages to enable the German forces to exercise an effective protection over the missions. On the whole the probabilities are in favour of the accuracy of the

Cologne Gazette's information. Should the intelligence prove to be premature it would have to be regarded as an eminently official *ballon d'essai*.

It will be seen that on no side was the remotest suggestion offered as to the right of a civilized Power to find in the acts of a gang of Chinese bandits a pretext for the seizure and permanent tenure of a portion of China's territory.

On Nov. 18th, the intelligence sent to London did not bear directly on the Kiao-chou affair:—

Berlin, Nov. 18.

The German cruiser *Kaiserin Augusta*, which for some time past has been anchored off the Pigeons, returned to Canea to-day for the purpose of taking on board the German quota of the European troops stationed on the island. The detachment consisted of an officer and 12 men belonging to the *Kaiserin Augusta*.

The inference drawn from this movement on the part of the *Kaiserin Augusta* is that the vessel has received orders to repair to Hayti, since the *Gefion* which would seem to have been originally intended for this service, cannot be made ready in time. It remains, however, to be seen whether this surmise be correct. The resources of the German Admiralty appear to be heavily taxed at the present moment, and great activity among the vessels which can be employed on foreign service is anticipated within the next few days. Meantime the Government maintains its silence with regard to the German troubles abroad. According to the *Post*, however, they formed the subject of conversation between the Emperor, the Imperial Chancellor, and the heads of the Admiralty and the Naval Cabinet on Monday afternoon, when energetic action was decided upon.

From these paragraphs it appears that it is already that say, before there was any talk of sending out an additional squadron under Prince Heinrich—the resources of the German Admiralty were said to be heavily taxed. These incidents will at least afford to the German nation some idea of the task that devolves upon Great Britain in keeping her flag floating on every sea throughout the world.

The latest news we have is dated the same day as the above (Nov. 18th), but despatched subsequently from Berlin:—

Shanghai, Nov. 18.

Kiao-chou Bay, on the south-east coast of the Province of Shan-tung, a harbour of great strategic importance, was seized by the German squadron on Sunday last as a measure of reprisal for the murder of two German missionaries at Yen-chau fu on the 1st inst. The battleship *Kaiser* and the cruisers *Prince William* and *Arcona* landed 600 men. The Admiral accompanied the force, which took possession of a hill commanding the Chinese camps. After seizing the telegraph station and the magazine without fighting, the Admiral sent a message to the Chinese General either to evacuate his position or surrender his arms. The General, having no ammunition, decided to retire.

Prior to the Yen-chau-fu massacre, Germany had been endeavouring to obtain a naval station in South China and the present opportunity was, therefore, in all probability seized to account. Two steamers have been chartered here to convey stores and material to the fleet. The occupation will apparently be more than a temporary one.

Berlin, Nov. 18th.

The German Press continues to be singularly ill-supplied with intelligence from Kiao-chou. To-day, indeed, the latest information is contained in telegrams from London, except for one brief piece of news which has had to make the journey from Berlin to Cologne and back again to Berlin before being published here. According to the *Cologne Gazette*, the facts above Kiao-chou Bay were occupied by 5,000 Chinese troops armed with the Prussian Jäger rifle, and having 14 Krupp cannon. As no battle is reported, the *Cologne Gazette* concludes that the Chinese retired without fighting.

The absence of official intelligence regarding the relations between the Chinese and German Governments is stated to be due to the fact that the Berlin Cabinet has not yet made up its mind as to the course it intends to pursue. Deliberations are being carried on between the Departments of State concerned, but it is said that no definite decision has yet been arrived at. In the event of a refusal on the part of the Chinese Government to accede to the German demands a prolonged

occupation of Kiao-chou would be rendered necessary, even if this did not belong to the original intention of the German Government. The active hostility of the Chinese must also be reckoned with as a possible eventuality, and in this case the cruiser division now in the Bay of Kiao-chou would have to be reinforced and its absence from other parts of Chinese waters be made good. Any such steps, however, could only be taken after elaborate consultation with the Admiralty, and with due consideration for the capabilities of the German navy.

Bishop Anzer of Shan-tung, who is making a stay in Germany, was received in audience yesterday by the Emperor.

According to the Catholic organ *Germania*, Bishop Anzer has received a further telegram from South Shan-tung stating that the recent murder of German missionaries was committed in the village of Chang-kia-chuang and was probably planned beforehand. It would appear from the telegram that the Christians defended themselves and wounded some of their assailants. It is added that nothing is being done by the mandarins to discover the guilty parties, and that none of the murderers have yet been arrested. The door of the episcopal residence at Yen-chau-fu had been broken open by the Chinese mob.

Here we are told—in a conjectural form, however—that the absence of official intelligence regarding the relations between the Governments in Berlin and Peking was due to the fact that the Berlin Cabinet had not yet (Nov. 18th) made up its mind as to the course to be pursued. Whether that statement is worthy of credence we can not tell, of course. But it is worthy of note that Baron von Heyking's return to Peking took place on the 18th of November, and that from no quarter can any indication be obtained that demands of any kind were formulated in Peking, or negotiations of any kind opened with the Chinese Government prior to the seizure of Kiao-chou. We are almost compelled to conclude that the Chinese Government was not approached until after the German Representative's return to Peking, which was several days subsequent to the seizure of Kiao-chou.

We append the article published by *The Times* on the subject, in its issue of Nov. 18th:—

By the steps it has taken to obtain redress for the recent murder of two German missionaries the German Government has shown a just appreciation of the Chinese character. Instead of wasting time in making remonstrances at Peking, which would assuredly have been met as usual by the innumerable dilatory devices of Chinese diplomacy, the Germans have landed a force in Kiao-chou Bay, in order to bring to bear the only kind of influence that Chinamen seem able to understand. That bay is said to be the nearest place to the scene of the murders. Whether that be the case or not, it is a very convenient and advantageous place for the German fleet, and will no doubt serve as well as any others for the purposes in view. Kiao-chou Bay, which is situated some distance to the south of the Shan-tung peninsula, is a large sheet of water completely landlocked and entered by a comparatively narrow channel. It may, therefore, be readily imagined that it would form an admirable naval base for any Power maintaining a fleet in Chinese waters. The German Press, aware of its merits from this point of view, is already reveling in the thought of a permanent occupation. In this respect it probably outruns the ideas and intention of the German Government. It is one thing to occupy a Chinese harbour in order to obtain redress for palpable grievances, but quite another thing to contemplate retention of the place in perpetuity. Other nations might find themselves compelled to transfer their sympathies from Germany to China were occupation to continue after the actual dispute has been settled. Russia in particular might be tempted to regard such occupation as an unfriendly act, since she is known to have recognized the strategic advantages of Kiao-chou long before the German missionaries came to a violent end. It is probably a mere coincidence that these unofficial promptings to seize the harbour appear immediately after the interference of Russia with the application of funds which it was hoped that Turkey would spend in German dockyards. In any case it is not at present necessary to assume that the action

of the German Government is prompted by any motive but the desire to exact reparation for the murder of German subjects.

The experiment is one which we ourselves have tried on one or two occasions, with results so excellent as compared with any obtainable by diplomatic negotiation at Peking that there is reason to wonder why we do not always follow the more effectual method. Outrages upon Europeans, if not directly instigated by the local authorities, are at all events always preventable by them. Generally speaking, direct instigation can be very satisfactorily proved. Attacks upon missionaries or traders usually follow upon the sedulous dissemination of incendiary writings in which the most atrocious crimes are laid to the charge of the foreigners. Left to themselves the common people are tolerant and indifferent, otherwise it would be impossible for foreign residents to enjoy as they do long periods of immunity from molestation. It is the literary, or official, class who from time to time stir up the populace to violence in order to further some end which they happen to have in view at the moment, or perhaps merely to satisfy animosities which the supineness of civilised Governments encourages them to believe that they can indulge with impunity. Consequently it is the local officials whom we ought always to hold responsible alike for actual outrage and for the gross infringement of treaty rights which goes on continuously and persistently. There is very little use in applying to the central Government to enforce responsibility. It has comparatively little control of the local governors, and that little it certainly will not waste on behalf of mere barbarians when its own demands call for all its efforts. But, on the other hand, the central Government is in no hurry to make common cause with the local authorities. The coercion of a Viceroy, even by the landing of troops or the shelling of his residence, is not an act of war against the Chinese Empire. The Viceroy has to take the whole responsibility for all that happens in his province, and if he comes to blows with a foreign Power he must settle the matter as best he can. It took our Foreign Office a very long time to understand that China is not a highly-organized State after the European model. Many despatches have been framed upon the theory that this country was bound to keep the Chinese Empire on its feet, and that to press for the redress of grievances was to endanger its stability. It may be doubted whether the misconception does not still linger in official minds. As a matter of fact, grievances must be redressed, if at all, by suitable appeals to the governor within whose province they arise. They can always be redressed in that way if we know how to make the appeal sufficiently moving; and the central Government will no more put its own forces in motion to help the Viceroy than it will to compel him to do justice.

With regard to more purely commercial troubles there is a wide field for the application of the same principle. After infinite delay and difficulty this country makes a commercial treaty with China securing certain rights for British merchants. But the ink is hardly dry when the local authorities at every trading centre proceed to neutralize all the provisions of the treaty by imposing local taxes and disabilities. If appeal be made to the central Government it plunges into interminable argument and negotiation, which may ostensibly terminate in one way or the other, but which never affords any practical redress. Again and again our vacillating policy has led to a war, at the close of which we get concessions on paper. But the war is not more effectual than the treaty, and the result is that British merchants in China are to-day demanding practically the same things that were supposed to have been secured for them thirty or forty years ago. The truth is that the central Government has not the power, even if it had the will, to make its promises effectual. The proceeds of the taxes which throttle British trade do not go to Peking, and the officials in each province simply go upon the principle of taking all they can get. It is to these gentlemen that we must apply, with arguments that they can appreciate. Among these arguments gunboats occupy an important place.

It is a strange revelation to find *The Times* alleging that Great Britain has, on one or to two occasions, tried experiments of the nature of the Kiao-chow seizure. Great Britain has much to answer for, many of the processes by which her empire has grown to its present dimensions will not bear scrutiny. But never yet did she send a naval squadron in time of absolute peace to invade the realm of a friendly Power and seize a portion of its territory

by way of preliminary to stating a grievance. We have persistently clung to the hope that no such sin could be laid to Germany's charge, but it appears now as though no ground for further doubt exists.

THE BELGIAN MINISTER.

We have much pleasure in being able to record the return of His Excellency Baron d'Anethan to Tokyo in completely restored health. When Baron d'Anethan left Japan last spring he was suffering from a malady which would probably have baffled medical diagnosis a few years ago. After the attack of typhoid fever by which the Baron was prostrated in the summer of 1896, a portion of the microbes retained their vitality and effected a lodgment in one of the ribs. Constant pain and other distressing symptoms ensued, and Drs. Baelz and Scriba, correctly diagnosing the cause of the trouble, performed an operation which, though affording temporary relief, did not effect a radical cure, and had to be repeated on a more extensive scale in Europe. The Paris experts found it necessary to remove the whole of one rib and a small portion of the breast bone, the latter, happily, being only slightly affected, though had the operation been delayed much longer, the sternum would have been involved beyond the possibility of surgical aid. Recovery proved extraordinarily quick owing to the patient's excellent constitution, and the Baron is now a hale and hearty man, to the great delight of his innumerable friends and the no small gain of his country.

MRS. CAHUSAC'S SCHOOL.

The Christmas breaking-up exercises of the Girls' High School, conducted by Mrs. Cahusac and her able assistants, took place on Saturday afternoon in Van Schaick Hall, before a considerable attendance of parents and friends. The stage was decorated with shrubs, flowers etc. and looked quite Christmas like. The Rev. E. Champneys Irwine, who presided, opened the proceedings with a few words of introduction and then the following programme was performed. Miss Leach playing the accompaniments to the vocal numbers and directing the calisthenics:

PROGRAMME.

PART I.

- 1.—Christmas Carol... "In the Field with their Flocks..." F. Farmer.
Chorus.
- 2.—German Song... "Die Lorelei"
Friedrich Tilcher.
1st and 2nd Classes.
- 3.—Calisthenics... "Dumb Bells"
3rd Division.
- 4.—French Song... "L'avril est là"
J. B. Wekerlin.
1st and 2nd Classes.
- 5.—Calisthenics... "Scarf Drill"
Senior Division.
- 6.—Song... "Good Morning Tommy Tomkins"
S. G. Pratt.
3rd and 4th Classes.
- 7.—French Action Song... "Ramenant les Moutons"
3rd and 4th Classes.
- 8.—Action Song... "Gipsy Song"
Emily B. Farmer.
1st and 2nd Classes.
- 9.—Calisthenics... "French Bar Bells"
Senior Division.
- 10.—Pianoforte Solo... "Gigue"
Miss Florence Wales.
- 11.—Action Song... "Fairies' Moonlight Song"
Emily B. Farmer.
3rd and 4th Classes.
- 12.—Calisthenics... "Rings"
Senior Division.

PART II.

TABLEAUX VIVANTS.

- I.—Cleopatra Miss Una Ackman.
Attendant..... Miss Violet Neville.
- II.—Mary Queen of Scots..... Miss Muriel Harrington.
Attendants { Miss Pauline Cleveland.
 Miss Marion Watson.
- III.—Queen Elizabeth Miss Florence Wales.
Sir Walter Raleigh..... Master George Neville.
Attendants { Miss Edith Wilson,
 Master Jimmy E-dale.
 Master Basil Cahusac.
- IV.—Boadicea..... Miss Una Brockelbank.
Show-Woman..... Miss E. Herb.
Chorus of Maids in Waiting.
Miss Hilda Watson. Miss Annie Bunting.
Miss Bessie Burns. Miss Ettie Kuhn.
Miss Vera Irwine. Miss Alice Mendelson.
Miss Gladys Howard. Miss Edith Bunting.
Miss Maydie Cahusac. Miss Edna Mendelson.
Miss Iris Irwine. Miss Bertie Cahusac.

IMPERIAL DIET.

ELECTION OF SECTIONAL CHIEFS.

The eleventh session of the Imperial Diet was called to order on the 21st instant. The number of members present in the House of Peers totalled 242 out of the 316 which compose the Chamber. The number present in the House of Representatives was 255, there being only 45 absentees. The sectional chiefs and vice-chairmen for the Upper House were elected by lot as follows:—

- 1st Section—
Chief Prince Tokugawa Iyesato.
Vice Mr. Nagayama Morihiro.
- 2nd Section—
Chief Viscount Uri Kimmasa.
Vice Baron Fumakoshi Yei.
- 3rd Section—
Chief Viscount Hayashi Tomoyuki.
Vice Mr. Itani Shigeakata.
- 4th Section—
Chief Baron Aoyama Tei.
Vice Baron Ozawa Takeo.
- 5th Section—
Chief Prince Nijo Motoshiro.
Vice Mr. Okabe Choshoku.
- 6th Section—
Chief Viscount Tani Kanjo.
Vice Viscount Soga Yujun.
- 7th Section—
Chief Viscount Ito Sukemaro.
Vice Viscount Kyogoku Takanori.
- 8th Section—
Chief Baron Honda Chikao.
Vice Mr. Matsuo Kozo.
- 9th Section—
Chief Marquis Godai Chujiun.
Vice Mr. Namura Taizo.

The chiefs and managers in the Lower House were elected as follows:—

- 1st Section—
Chief Mr. Takei Sozemon.
Manager..... Mr. Eto Shinzaku.
- 2nd Section—
Chief Mr. Suyeyoshi Takaharu.
Manager..... Mr. Ogino Rokuro.
- 3rd Section—
Chief Mr. Suzuki Shigetō.
Manager..... Mr. Kanaoka Mataemon.
- 4th Section—
Chief Mr. Tanikawa Takatada.
Manager..... Mr. Naohara Morijiro.
- 5th Section—
Chief Mr. Yoshitomi Kan-ichi.
Manager..... Mr. Rai Toshinao.
- 6th Section—
Chief Mr. Sato Shozo.
Manager..... Mr. Morimoto Hanasaburo.
- 7th Section—
Chief Mr. Wada Hikataro.
Manager..... Mr. Hamaguchi Kichieemon.
- 8th Section—
Chief Mr. Takemura Tobei.
Manager..... Mr. Takeuchi Toramatsu.
- 9th Section—
Chief Mr. Yoshida Rokuzai.
Manager..... Mr. Kawakita Kanshichi.

The clock which was actually made by the Royal hands of Louis XVI. came into the possession of a member of the Rothschild family two or three years ago. It is probably the most valuable clock in existence, its present owner having given no less than £33,600 for this remarkable timepiece.

THE ASIATIC SOCIETY.

THE members of the Asiatic Society present at its last meeting are said to have adopted a resolution—final or preliminary, we do not know which—in favour of winding up the affairs of the Society and dissolving it. The principal ground for such a proposal seems to be that contributions to the Transactions have not only become few, but have also ceased to be of a character likely to add much to the public's knowledge of Japan or to the Society's reputation as a learned association. It is not to be denied, of course, that the Transactions during recent times have contained little that is either particularly interesting or particularly novel. Neither can it be denied that materials for the compilation of essays are not within such easy reach as they used to be. We do not intend to suggest that materials are lacking, or even that they have become scarce. Twenty, or twice twenty, subjects could be catalogued, each worthy of study and each inviting investigation. But the standard of research has changed. There confront us, indeed, among the papers contributed to the Society in the past a number of monographs by men like SATOW, ASTON, CHAMBERLAIN, MCCLATCHIE, GUBBINS, WIGMORE, LLOYD, CONDER and others, which must always be regarded as models of scholarly research and analytical and synthetical skill. But side by side with these admirable essays we find a multitude of minor contributions which, though valuable and interesting enough in the times when every spark of information showed appreciably in the darkness that enveloped things Japanese, would now-a-days be counted far too trivial and superficial to deserve preservation in the records of a learned society. Every month, at the meetings of Japanese associations or in the pages of Japanese magazines papers are read or printed which reach a far higher level of scholarship than a majority of the fugitive researches appearing in the Transactions of the Asiatic Society, and it is natural that as this comparison grows more striking, there should grow up also a corresponding unwillingness to invite it. In short, the Asiatic Society no longer counts for so much, or anything like so much, as it formerly counted among exponents of Japanese ethics, traditions, literature and history, and one can easily sympathise with the conviction evinced by the voting at the last meeting, the conviction that having outlived its opportunities for being conspicuously useful, the Society had better be quietly laid away in its grave. It is to be hoped, however, that the resolution will be reconsidered. To dissolve the Society is one of the easiest possible undertakings; to resuscitate it, one of the most difficult. We need not dwell upon its claims to consideration as a venerable institution, bearing upon its roll of members many names

that will live in the history of the Far East; neither need we speak of the excellent work that it has accomplished in the part. No special account will be taken, perhaps, of that class of sentiment. Points possessing a greater claim to the attention of practical men are, in the first place, that the Society is financially vigorous; in the second, that a new era of usefulness may at any moment open for it, and, in the third, that its continued maintenance involves no serious outlay or trouble. If its affairs threatened to fall into a state of pecuniary embarrassment, or if its membership were gradually dwindling, there might be reason to adopt some timely and drastic course. But it enjoys a good income and is in possession of a considerable accumulation of money. Why proceed hastily to its destruction? The dearth of valuable essays may be only temporary. It does not appear that the German Asiatic Society is much better supplied at present, yet nothing is heard of its dissolution, and a comparative want of tenacity is not the kind of trait that an Anglo-Saxon institution might be expected to display. We are persuaded that the life members, of whom there are a good many, would vote unanimously against burying the Society, and it must be remembered that the life members have a paramount right to be consulted. The case seems to be one calling eminently for a little trust in time.

LAND TENURE BY FOREIGNERS.

IT seems to be the fate of some questions that present themselves for discussion in Japan to be tossed backwards and forwards between controversialists until they lose their original shape altogether and become wholly transformed issues. The problem of land tenure by foreigners under the Revised Treaties is an illustration. Nothing could possibly be simpler than the question as it presents itself for practical solution. The third article of the Revised Treaty provides that British subjects in Japan "may lease land for residential and commercial purposes, conforming themselves to the laws, police, and customs regulations of the country like native subjects." In other words, British subjects will be entitled to lease land according to the provisions of Japanese law. What, then, are those provisions? They are that land may be leased for a fixed period, the length of which is determinable by the lessor and the lessee and can not be subsequently altered by the Law Courts; or that it may be leased for an indefinite period, in which case the assistance of the Law Courts may subsequently be invoked by lessor or lessee to make the period finite. Nothing could be simpler. To reduce the matter to concrete terms—a British subject will be competent to lease land for any term of years to which the lessor agrees, and will enjoy absolute

security of tenure during that term. It may be a term of ten years or it may be a term of a hundred years: the law imposes no limit. Practically speaking, that is the only privilege with which the foreigner has any concern. It is necessary that he should understand the contingencies to which he exposes himself if he rents land for an indefinite term, and we have consequently explained in the clearest manner what those contingencies are. Business men, however, are not likely to conclude indefinite contracts. They will want to know exactly what is before them, especially if they contemplate the erection of buildings on the rented land; and they will therefore sign leases for a fixed term. The one point of importance is whether they can obtain a long enough term, and since the Civil Code contains no restriction whatever in that respect, it follows that the lease may run for whatever length of years the contracting parties agree to fix.

It ought to be impossible to obscure so clear an issue, however facts be perverted or arguments misconstrued. Yet it has been obscured and bewilderingly obscured. An inexplicable difficulty seems to be caused, for example, by the word "superficiary" which appears in the Japanese Code. The *Kobe Chronicle* writes about a superficiary thus:—

A "superficiary," as has been already explained, is a person who has acquired somehow or other a title to occupy and use the land of another, for the purpose of erecting buildings or planting trees on it, and who, having thus improved the property, wakes up some fine morning with the brilliant idea that he would like a lease. Thereupon he applies to a law court to have his period of occupation "limited," and the court, on receipt of such application, is competent to fix the period at "not less than twenty years and not more than fifty," or presumably it may reject the application altogether. When dealing with this remarkable doctrine on a previous occasion, we suggested that any man who erected buildings and planted trees on land before acquiring a legal title to it, duly signed, sealed and registered, would be displaying sufficient eccentricity to warrant his being placed in charge of his friends. It is simply absurd to put forward such a contention as affecting the argument one way or the other. No tenant is likely to place himself in the power of his landlord by undertaking improvements or constructive work before the conditions and terms upon which the ground is held have been decided.

It is indeed absurd to put forward such a contention. There we are entirely at one with our Kobe contemporary. But the absurdity is due solely to the *Chronicle's* amusing obtuseness. We are bound to assume ordinary intelligence on the part of a journalist, but the inevitable consequence of such an assumption in this case is distinctly unpleasant. The foreigner who "acquires some how or other a title to occupy and use the land of another," and who having occupied and used it for a time, "wakes up some fine morning with the brilliant idea that he would like a lease," is one of the quaintest fictions that a perplexed controversialist ever devised to cover his discomfiture. Of course the *Kobe Chronicle* knows perfectly well that a "superficiary" is a lessee; a person who has acquired, not "some how

or other," but by duly concluded and registered lease, a right to occupy and use the land of another. If his lease is for a fixed term of years, his waking thoughts need never be illumined by any "bright idea" of the kind invented by our imaginative contemporary; if it be for an indefinite period, he may indeed be disturbed from time to time by thoughts of his own improvidence. The *Kobe Chronicle* professes to believe that the possibility of concluding leases for an indefinite period is put forward by us as a point of "immense practical importance." That is mere persiflage; wearisome persiflage. The possibility of concluding a lease for a definite period, amply long enough to justify any kind of building or planting operations, is the point upon which we have always insisted as practically important.

Another singular difficulty relates to the provisions of the Revised Treaty. We recently stated that "if the Revised Treaty secures certain privileges to foreigners, and if the local authorities attempt to interfere with the enjoyment of those privileges, there will be a simple and certain method of correcting the abuse." Our contemporary replies that the Revised Treaty gives no privilege whatever in the matter of leases to foreigners. We suggest that if the *Kobe Chronicle's* memory were strong enough to recall the sequence of its own arguments, a misunderstanding of this nature would not occur. Its original contention was that any liberty of contract granted by law might be rendered illusory by secret instructions from the Japanese Government to the Local Authorities, without whose coöperation a lease can not be registered. Our answer was that the representatives of each nationality could prevent any such abuses. Thereupon the *Kobe Chronicle* retorts that the Treaties give no privilege whatever. Of course they do give a privilege. They give the privilege of leasing land subject to the provisions of Japanese law. The *Kobe Chronicle* is apparently incapable of perceiving that its own apprehension lest the Japanese Government should go behind the law would be absolutely meaningless unless the Treaty secured to foreigners the rights established by the law.

Concerning the general question of obtaining some further guarantee from the Japanese Government as to the tenure of land by foreigners, we fear that the attempt would be futile. That foreigners should be placed on precisely the same footing as native subjects in this matter, namely, that they should be allowed to own land as well as to lease it, would be a wise and most desirable extension of the Treaties. Japan is blind to her own interest when she withholds that privilege. But it is one thing to ask her to extend

the scope of the Treaties so as to secure to foreigners all the rights created by her laws; it is another and a very different thing to ask her to specially exempt foreigners from the purview of her laws. This second proposition would be contrary to the spirit by which she has been animated in all her efforts to revise the Treaties, and would be contrary to the spirit of the Revised Treaties themselves. She would feel compelled to answer that her laws are the only security she can offer, and that no diplomatic pledge is necessary to guarantee their impartial administration. If there be any uncertainty about the exact nature of the privileges that the Civil Code confers in the matter of land leasing, we presume that steps will be taken diplomatically to place the question beyond the reach of doubt. But for the rest we do not see that anything can be judiciously attempted until the light now breaking upon Japan becomes strong enough to enable her to decipher her true interests between the lines of her injurious prejudices.

DISTRICT GRAND LODGE OF JAPAN.

The annual communication of the District Grand Lodge of Japan was held at the Masonic Temple, Main Street, Yokohama, on Monday evening under the presidency of the Right Worshipful the District Grand Master of Japan, Bro. William Henry Stone. There was a very large gathering of the Brethren. After the usual business had been transacted, the D. G. M. invested his officers for the year as follow:—

Wor. Bro. T. C. Thornicraft, M.D.	D.D.G.M.
Alt. Woolley, W.M., 1092	D.S.G.W.
D. McDonald, M.D., W.M.,	
2015	D.J.G.W.
Rev. E. Champneys Irwin,	
M.A.	D.G. Chap.
Geo. Hodges	D.G. Treas.
P. M. Skinner, W.M., 1401	D.G. Reg.
H. Moss	Pres. D.B. of G.P.
C. D. Moss	V. Pres. do
H. J. Sharp	do do
O. Keil	D.G. Sec.
A. Bellamy Brown, W.M.	
1263	D.S.G.D.
Bro. E. L. James	D.J.G.D.
L. Ph. von Hemert	D.G. Supt. of W.
W. M. Wentworth	D.G.D. of C.
P. Launay	D.G.S.B.
H. J. H. Grumble	D.G. Org.
Rev. W. J. White	D.G. Pitt.
F. J. Lias, 1092	D.G. Steward
F. W. Thomas, 1263	D.G. Steward
V. E. Abraham, 1401	D.G. Steward
J. H. Curtis, 2015	D.G. Steward

A banquet followed, at which the Rt. Wor. D. G. M. Bro. Stone took the chair. The usual loyal and Masonic toast were all duly honoured.

ACCIDENT TO A P. & O. COM-MANDER.

A nasty accident happened at the pier on Tuesday afternoon whereby Captain Pollock, of the P. & O. intermediate steamer *Malacca*, received serious injury. He was engaged watching from the pier the discharge of some iron rails when a sling broke and the loose steel wire end swung round catching Captain Pollock on the thigh. The force of the blow was so severe that the Commander fell down unconscious. He was picked up and conveyed to the General Hospital where he still remains. The *Malacca* left harbour this morning on its homeward voyage in charge of the chief officer.

JAPANESE FACTS AND COMMENTS.

According to the *Tokyo Shimbun*, recent arrivals of snake gourds in Yokohama amounted to 800,000 pieces, but as no orders have been received from abroad the trade is absolutely dead; a most unprecedented state of affairs.

According to investigations completed by the Finance Department and published in the *Mainichi*, the exports and imports of bullion during November were as follow:—export of gold, 4,220,846 yen; import, 106,511 yen; export of silver, 729,661 yen; import, 1,349,074 yen; total export, 4,950,507 yen; import, 1,455,586 yen. Thus an excess of 3,494,920 yen in exports over imports is noticeable.

The amount of convertible notes issued above legal limits on the 13th inst. did not exceed 26 million yen, asserts the *Fiji Shimpō*. On the 16th instant, however, it swelled to 27,300,000 yen. No serious changes will occur during this week in spite of the end of the year being at hand, but it seems probable that a sudden increase will be noticeable by the 22nd or 23rd instant. Thirty-five millions will, it is supposed, prove hardly sufficient to meet the demand at the end of the year.

Now that the year is almost at its close, serious pressure is felt in the money market. It is probably owing to this that an enormous amount of public loan bonds were offered for sale during the past few days. On the 15th inst. Consols were quoted at 92.80 yen and War Bonds at 93 yen. Yet they failed to find buyers, and in the afternoon quotations fell suddenly to 92.50 yen and 92.60 yen respectively. Such depreciation has never been experienced, alleges the *Hochi*, since the 23rd year of Meiji.

The capital of the Agricultural and Industrial Bank subscribed by various Tokyo banks amounts to the following figures:—Mitsui Bank, 16,872 shares; Ome Bank, 10,315 shares; 78th National Bank, 5,412 shares; Kiobashi Bank, 4,773 shares; Mansei, 3,002; Shinagawa, 2,840; 3rd National Bank, 2,494; Tokyo branch of the 78th National Bank, 1,735; Shitaya, 1,456; Kojimachi, 1,446; Agricultural and Commercial Bank, 1,253; 1st National Bank, 1,253; Commercial and Industrial Bank, 520.

The Government's project of issuing small loan bonds from five to twenty yen has attracted public attention for the moment, asserts the *Chuo*. The amount to be issued is 50 million yen. The scheme can only be rendered successful through the coöperation of the various banks. Bankers, however, have begun to urge that as the project is calculated to impede the development of their savings deposit business they ought to oppose it. Arguments to that effect have, it is said, been received by the Finance Department from all parts of the empire.

Commenting upon the advisability of dissolving the Industrial Bank, the *Forodsu* says that while the Bank is provided with a capital of 2,500,000 yen, loans issued by it do not exceed 450,000 yen, the balance being deposited with the Bank of Japan at three per cent interest. It would have been far better if the Bank had not existed at all. Having been proven detrimental to the public interest, resolute steps should be taken to dissolve the institution. Should any circumstances exist by which dissolution cannot be carried out, then measures might be adopted for effecting the amalgamation of the Bank with the Nippon Ginko, so that profits might be shared with the latter and the Government's protection abolished. Such a scheme would secure advantages both for the Government and the Bank.

Owing to the continued rains of last summer and the scarcity of mulberry leaves, the rearing of silkworms in Kanagawa prefecture this year has been unsatisfactory. Yet, compared with the previous year, no great difference is observable, for the autumn moths have turned out splendidly. The prevalence of dysentery having decreased the number of producers, a reduction

of 994 *koku* in the amount of cocoons as compared with the previous year is noticeable. Below are the details:—

	Summer. koku.	Autumn. koku.
Cocoons	751	3,318
Pierced cocoons.....	11	39
Tama	102	452
Waste cocoons	88	406
Total—summer cocoons, 952 <i>koku</i> ; autumn cocoons, 4,215 <i>koku</i> .		

The *Hochi* states that the shares of the Bank of Japan which till recently were quoted at 360 or 370 *yen* have suddenly risen to 380 *yen*, and even at this high rate are not easily procurable. While other shares and public bonds have shown a downward tendency, the shares of the Nippon Ginko alone are steadily increasing in value. Surely there must be some reason for this anomaly. The recent fluctuations in silver appear to have enabled the Bank to realize a profit of 7,300,000 or 7,600,000 *yen* on its specie reserve, and this amount is to be taken into the profits and may be distributed among shareholders as a special dividend at the general meeting to be held in February next. The Nippon Ginko's shares are of 300 *yen* face value, of which 150 *yen* are paid up. It is proposed that the balance of 50 *yen* which still remain unpaid should now be paid-up out of the extra profits above referred to.

The price of commodities has begun to show a downward tendency, but, says the *Foros*, we have scarcely any reason for congratulation. We take it only as a happy phenomenon when depreciation of commodities is secured as the result of a falling-off in the rates of interest and in the expenses of productive industry. At present the scale of interest rises daily while industrial expenses are in no way decreased. Yet products obtained by means of capital paying high interest and high industrial expenses already begin to fall in price. Nothing can be more anomalous than such a state of affairs. The present depreciation of commodities seems to have resulted, not from development of economic affairs, but from the serious embarrassment of the financial community. The disorganization of finance is at its climax and threatens the whole empire. These and these alone are the direct causes for depreciation. The fall in prices of commodities therefore must be regarded as a matter of regret rather than of congratulation.

A report from Consul Uchida in New York as published in the *Mainichi*, gives the details of the import of silk into America for one year ended June last, as follow:—

From	Account. Bales.	Value
Europe (European production).....	5,030	3,856,318
Europe (other than European production).....	258	888,195
Hongkong	5,336	1,221,661
Shanghai.....	10,520	4,008,702
Japan	24,771	10,368,583

Total.....46,501 19,833,686
It will be seen that Japan supplies America with 53.3 per cent. of its silk; Shanghai with 22.6 per cent., Hongkong with 11.5 per cent., and Europe with 12.6 per cent. Japan therefore takes up more than one-half of the total import of silk to America, China supplying only one-third, and one-tenth is provided by France, Italy, and other European countries. From these facts it is plain that Japanese silk ought to have a great future in America. But it must be remembered that the favour enjoyed by Japanese silk there does not arise from superiority of quality, but from cheapness. Under these circumstances anxiety is entertained by many sericulturists on the ground that failure to improve the quality will be surely attended with serious results.

The clamours raised by the public against the scarcity of capital do not, asserts the *Tokyo Asahi*, necessarily imply a scarcity of funds, but rather represent public want of confidence in banking methods. This so-called deficiency of capital is not a problem that has arisen for the first time to-day. It existed when extravagant

expansion became the order of procedure in both government and private undertakings after the war with China. Notwithstanding the fact that the people contributed 200 million *yen* in the form of War bonds, their aggregate capital invested after the war in connection with railways, companies, banks, and other undertakings swelled from 300 million *yen* to 1,400 millions. Such an increase being virtually five-fold, the amount of notes and coins put into circulation ought to have been doubled at least. But that was not the case. That the economic world has been able to continue operations up to the present without serious difficulty is owing to the enforcement of the system of promissory notes. In short, the financial administration of the country from the outset stood on a speculative basis. Any excesses indulged in under this system were therefore bound to impair credit and produce a panic, and its consequences are now being felt all through the financial community. To talk of a deficiency of capital in utter disregard of the loss of credit and to endeavour to promote speculative enterprises are motives to be condemned as being the outcome of pure selfishness.

NEWS OF THE WEEK.

A steel steamer of 6,150 tons, with 3,500 horse power, which is being built at the Mitsu Bishi shipbuilding yard at Nagasaki, has been granted a certificate entitling the owners to receive a subsidy in accordance with the Shipbuilding Encouragement Law.

The *Yushin Nippo* states that Majima Shōtarō (an ex-clerk in the Kobe Custom-house), one of the prisoners arrested in connection with the Custom-house scandal, died on the night of the 14th inst., in prison, from an affection of the lungs.—*Kobe Chronicle*.

Mrs. Barnabas Brough, the novelist, mother of the well-known actor, Lionel Brough, died in London on Nov. 24th in her 95th year. Her husband was a dramatic author and all the members of the family have displayed a marked literary or histrionic aptitude.

A series of violent collisions occurred at Antwerp on the evening of 6th November between a number of sailors of the Japanese vessel *Tosa Maru* and the Antwerp police. The sailors were in the end driven back to their ship, but the police were compelled to use their arms, and two of the Japanese were wounded and taken to hospital.

We learn that an examination of the bottom of the N.Y.K. steamer *Kinshiu Maru* made by the Company's diver, shows that damage was done by the recent collision, under water, from the water line to the first plate above the keel. None of the plates under water have been actually fractured, but they are dented, and the rivets broken or started.

The details of the recent Congo massacre show that the Belgians had a very bad time for a while. A priest was captured and stripped of his clothes, but afterwards the native gave him a tusk of ivory and let him go. Doubtless he was glad; but a tusk of ivory is a poor substitute for trousers on return to civilisation. Baron Dhanis himself fared scarcely better, for he escaped in his shirt. For a time, indeed, remarks the *Globe*, the Belgians may be said to have experienced all the naked horrors of war.

Another American press yarn is authoritatively knocked on the head, though it is an open question whether the story will die the death it should. It relates to the alleged discovery in the Vatican of Pilate's report to Tiberius on the crucifixion of Christ. Upon the tale reaching Rome, Father Denifle, Director of the Papal Archives, said, "Such a find is utterly impossible. The oldest manuscript in these archives does not date back so far." Father Ehrle, Perfect of the Apostolic Library of the Vatican, said:—"The Vatican library has been overhauled frequently. No manuscript is older than the third century.

Several copies of two apocryphal (spurious or of doubtful authenticity) documents from Pilate to Tiberius exist, the chief versions of which have been published by Fieschendorf."

West Londoners are nearly all living in flats nowadays, remarks a home paper, and this no doubt explains the rapidly growing custom of taking the principal meals at a restaurant. Small flats are not particularly convenient for cooking, and young married couples, women living together, and sometimes whole families, are to be met evening after evening in the restaurants round Oxford Street and the Edgware Road.

On Saturday night, says the *Kobe Chronicle*, a jinrikisha coming wildly down the hill with an *alo-oshi* riding in the vehicle, collided violently with another jinrikisha in which Mr. Ch. Braess was riding. Mr. Braess was thrown violently out of the vehicle, but fortunately, though badly bruised, he escaped without injury of a serious nature. The man who was in the shafts of the other jinrikisha had to be removed to hospital.

Admiral Thomas Massie, who succeeded Sir Provo Wallis as Father of the Fleet, is a hale and active man of 95, full of stirring memories, and "ready," as he avers, "to go to sea again, if his country wants him." He was born three years before Trafalgar, and has vivid memory of the Waterloo rejoicings. He joined the service as a midshipman in 1818, and took part in the battle of Navarino. He reached flag rank before leaving the navy at the age of 58. Admiral Massie is a well known and revered figure at Chester, where he takes his walks abroad daily with the regularity of clockwork.

Two Japanese boatmen were arrested on the 15th inst. at Inasa, Nagasaki, by the police on suspicion of being concerned in the murder of Frank Epps, late apprentice on the U.S. Flag-ship *Olympia*. It now appears, says the *Nagasaki Press*, that the deceased paid a visit to Inasa on Sunday evening, and on returning engaged a sampan from that village to convey him to his vessel. This information was notified to the Police on Wednesday morning, who till then had been prosecuting their inquiries among the boatmen on this side of the harbour. Inquiries were at once instituted at Inasa, with the result as above stated.

Among old Japan hands present at the China Association dinner held at the Hotel Metropole on 4th November, we notice the names of Mr. J. Rickett, Mr. Jas. Dodds, Mr. A. Winstanley, Mr. W. M. Stuchan, Mr. Heimann, Mr. G. T. How, Mr. F. D'Iffanger, and Mr. A. J. H. Carllill. The Chairman was Mr. William Keswick, of whom it was remarked:—"Mr. Keswick's experience of Shanghai and Hongkong goes back to the back of beyond, if we take 'beyond' to mean the Treaty of Tientsin. It goes back, in Japan, to the days when the foreshore of Yokohama was bare, save for fishermen's huts. There are, on the committee, other men of great experience, but none, we believe, who go back so far as he. And the younger men who are now in China, pushing forward the work which these began, will be the first, we are sure, to recognise the value of the knowledge which such experience implies. Historical knowledge tends to simplify many problems which appear hopeless when no such solvent is at hand.

A daring raid on a South African bank is reported in a dispatch from Cape Town to *The Times* under date of November 27th. The bank in question is known as the Standard, and is situated at Claremont, a suburb of Cape Town. A masked man entered the counting-room of the bank, locked the door, and by some unknown means broke the neck of the cashier, though no marks of violence could be found on the body. When the manager of the bank appeared the robber shot and wounded him slightly. The police then rushed in and the robber, seeing that all chance of escape was gone, shot himself dead.

Some time ago an officer of artillery called upon Sir John Adye at Simla for a certificate of

his being alive, as without this he had found it impossible to draw some pay and allowances due to him. As he seemed to all intents and purposes lively enough he got what he wanted, but on examining the document he remarked: "Oh, I see you have dated it August. This is no use. I have already sent them in one of this kind, but they say they must have a certificate stating that I was alive in July." This, of course, was a different matter, and demanded circumspection. However, after consideration, Sir John gave him a paper, in which he certified that to the best of his belief the officer was alive in the previous month. Surely this is red-tapeism in excelsis!

The three following items of news are taken from Australian papers with the headings originally given them:—

WHAT A JAW!

Auckland, November 11.—The New Zealand House of Representatives sat continuously for thirty-three hours discussing the Estimates.

MAKING SURE!

Brisbane, November 18.—A miner named Thomas White has committed suicide at Georgetown by blowing his head off with a dynamite charge.

GOOD OLD BRUMMAGEN!

London, November 17.—It has transpired that certain gunmakers in Birmingham have been supplying large quantities of arms to the tribesmen on the Indian frontier.

For some years past the senior bishopric in Japan has been a source of considerable uneasiness to the Church Missionary Society, remarks a London journal. On the formation of the bishopric in 1883 the Society agreed to pay £500 per annum towards the Bishop's stipend, and so long as the first Bishop (Dr. Pool) lived all went well. But he was succeeded by Dr. Edward Bickersteth, whose theological position was not altogether that of the Society, and the more extreme of its friends clamored for a withdrawal of the grant. In common fairness, however, the Society would not yield to the demand, though it was repeatedly pressed upon it. Now, however, it is determined to make a stand. Bishop Bickersteth has been succeeded by Bishop Awdry, a staunch High Churchman, and the Committee have passed a resolution that "they cannot enter into an agreement for a contribution by the Society towards the maintenance of the bishopric in South Tokyo."

Dr. Albert S. Ashmead, of New York, says there are lepers in that city "very close to the Four Hundred." He alleges that leprosy is not due to filth, and points out that leprosy spreads in Japan where the commonest coolie takes his daily bath. He contends that it is contagious and not hereditary, and alleges that isolation and sanitary government of the leper's family (including abstinence from the common spoon and bowl, same beds, and absolute separation from bodily contact of children and grandchildren from leprosy father or mother and grandparents) have prevented the transmission of the disease to children or grandchildren. He adds, however, that "it is spread by the contact of the mucus of the mouth, for instance, bacillus charged with the same spoon. The bacillus cares not either for filth or cleanliness; he wants only an entrance through broken skin or mucus."

We take the following details in regard to Sir Edwin Arnold's recent marriage to the Japanese lady, Mrs. Watanabe, from *The Home Journal*:—"The poet-journalist first met his present wife, his third, in Yokohama, in 1891, when he visited Japan with his daughter Edith. He was already, in a dilettante way, a believer in the mysteries and beauties of Buddhism. One morning Miss Edith Arnold went to the Legation in great distress. She said that her father had gone crazy. He claimed to have married the pretty widow of Colonel Watanabe, of the Japanese army, but, so far as she could discover, no ceremony had been performed, which shocked her European ideas greatly. Mr. John F. Swift, the U.S. Minister, called on

Arnold, who introduced him to his bride, and explained that they had been married by the Japanese method of drinking a cup of tea together. "It is the custom of the country, and will be as binding on me as would a pompous ceremony in a cathedral," said the poet, whereat his daughter and friends had to be satisfied."

Very many people in Kobe, remarks the *Chronicle*, will regret to hear that Mr. Egawa, the Superintendent of the Kobe Customs, has sent in his resignation because of the recent scandals, and that his resignation has been accepted. Mr. Egawa has been Superintendent for more than fifteen years, and foreigners whose business has brought them into contact with him have always found Mr. Egawa a courteous and obliging official. Mr. Minakami Hiromi, a revenue inspector in the Finance Department, has been appointed to the position, but until his arrival Mr. Yamaoka Gigo, the appraiser, will perform the duties of Superintendent. Two Chinamen, named Kyu Kai so and Cho Jo-sho, who were living at No. 27, Kaigan-dori, Kobe, and an ex-tidewater named Fukui Suteichi, were arrested on Thursday in connection with the Custom-house scandal.

A distressing fatality is recorded in a telegram appearing in the American papers that came to hand on Saturday. The dispatch is dated London, Nov. 23, and reads:—"The Countess of Lathom, while returning from a shooting party to-day, was thrown out of a trap and killed near Wigan, Lancashire. The Countess was formerly Lady Alice Villiers, second daughter of the fourth Earl of Clarendon. She was married to the Earl of Lathom in 1860. They had four children, two sons and two daughters. The eldest son is Lord Skelmersdale. The Earl of Lathom is the Lord Chamberlain of the Household of Queen Victoria; English Freemasons need no reminder of the exalted position Lord Lathom holds in the craft, being next to the Prince of Wales."

CORRESPONDENCE.

MISSIONARY BOOK-KEEPING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—To what extent the public might sympathize with the criticism of Rev. W. E. Hoy in the *Daily Mail* of Dec. 2nd, we of the Mission to which he belongs could not judge; but we have lately been aroused to a sense of the mischief that may be done by a few misleading turns of expression in that article. One sentence reads:—"Last year, however, before leaving for America, he [Mr. Hoy] had to hand over his books and affairs to the Rev. S. S. Snyder and it became necessary to inform the latter of what had happened." It was, by the way, not last year, but just three years ago; and it was not Rev. S. S. Snyder, but Rev. D. B. Schneider, who served as Mr. Hoy's substitute while he was in America; and Mr. Hoy is still, as he always has been, the trusted Treasurer of our Mission. But it is the mere imagination of the writer that is responsible for the assertion that "it became necessary to inform." The books were all in order and Mr. Hoy was free to tell or not to tell. His motives were those of a friend and entirely personal. If he had no other motive, it was his plain duty to warn his successor. In fact three men did later make a similar attempt on Mr. Schneider. Of this the police were duly informed.

After the robbery, Mr. Hoy had at once on his own credit here, but mostly on the security of relatives possessing means in America, borrowed money to make up the loss, of course securing his family by having his life insured. So he made the loss a personal one. To be sure, the Missionaries that can take up such a burden are not numerous. But the fact is that Mr. Hoy could and did. At the end of the fiscal year the books were audited regularly and a financial report returned to America as usual; what Mr. Hoy was doing with his personal means was none of the Mission's business.

The minutes of the Mission in the handwriting of Mr. Schneider testify that in April, 1891, he, as one of the auditors, examined the Treasurer's Annual Report and found it correct. He likewise audited the Financial Report of the Committee that erected the building for the Tohoku Gakuin, and a special meeting of the Mission was called to ratify it in October of the same year. Mr. Schneider is

now in America, and his address is Reading, Pa. The Treasurer of the Board in America, is Joseph L. Lemberger, of Lebanon, Pa., a man of affairs who would never tolerate slovenly book-keeping. The mission would be most happy if some one really interested in the financial honour of the missionaries would take the pains to ascertain from these gentlemen the facts, and have our books in Sendai investigated, which might easily be done through a committee of residents. We should consider it a favour. It is this very lesson of the necessity of strict book-keeping that we have been continually urging on the Japanese Christians with whom we are associated, and it is for their sakes also that we wish all doubt of our financial integrity removed.

But Mr. Hoy is more than our treasurer, he is a beloved brother. And now that we have been constrained to speak of his official relation to our mission, we cannot stop at that. As Treasurer he has been above reproach. As an individual, his action may be praised or blamed. It is difficult for any one to understand the motives that impelled him to such a strange sacrifice, and impossible for another to judge what was his duty under the circumstances. His whole life has been a preparation for that decision. It is his experience that gave him courage to dare what most men would not have dreamed of doing. One who knows the wonder which he (and, in justice let it be added, his family) accomplished in the way of economy and self-denial before ever the robbery occurred, is not so much surprised that he decided as he did. And it is only necessary to know the circumstances under which that money had been raised in America, the opposition in the Church to Mr. Hoy's policy of establishing an educational plant in Sendai, and the fiery zeal with which he overcame that opposition, then one can begin to understand how he felt that he dared not either give up his project or ask the Church for that money a second time. Once resolved to make the loss a personal one, he had no choice but to keep it a strict secret. We who know Mr. Hoy honour him because he did what he believed to be his duty. Let those who are capable of a similar sacrifice for duty's sake reproach him.

For the Mission of the REFORMED CHURCH in the U.S.,

CHRISTOPHER NOSS, Secretary.

Sendai, 16th Dec., 1897.

THE NAGOYA YORO IN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Would you kindly allow me space for a few lines about the above-named "Home for Destitute Children and Aged People," which was begun shortly after the great earthquake of Oct. 28, 1891?

At that time you were good enough to publish a letter, from the late Rt. Rev. Bishop Bickersteth, describing the sad state in which I found many of the poor people. As a result of this letter I almost immediately received a sufficient amount of money to enable me to rent a house and take in about a dozen of the most helpless cases. A year later I found myself in possession of sufficient funds to buy a plot of three hundred *tsubo* and build a house to accommodate about thirty people. The work thus begun has gone on steadily, and, for some time past, the building has been quite full. The first person admitted—a great grand-mother, then eighty-four years of age—and two old men admitted soon afterwards, are still with us, but the character of the inmates, as a whole, has changed considerably. At first they were nearly all aged people, while now the most of them are boys, the numbers being ten of the former and twenty-one of the latter. The maintenance of this rather large family has been provided for, almost entirely, by voluntary subscriptions from foreigners in Japan and other friends in Canada, England, and the United States. No appeal for funds has ever been made, with the exception of the late lamented Bishop's letter above mentioned, and all real needs have been supplied. The plan followed from the beginning has been to give full information as to how the Home is being conducted by means of an Annual Report, and to go straight to Him whose is the silver and the gold for all that is required. During the past year, owing to the great rise in prices and an increased number of hungry boys, the expenses of the Home have been larger than ever before. We began the year with but a small balance and we shall close it apparently with about the same amount in hand. The treasury has never been very full and never quite empty. The funds are disbursed only by myself and the Home is entirely under my own direction. The larger part of the funds comes from persons to whom I am personally known, but,

occasionally, nice little sums are received from persons with whom I have had no previous acquaintance. These are very pleasant surprises and often come in most opportunely. Let me just mention one of them.

A few days ago I received a letter from Yokohama, enclosing a cheque for yen 79.25, with the information that it was the result of a "Fair" held at the end of last month "by four girls." I am not informed as to what the "Fair" was like but suppose that these four girls, with the permission and assistance of their parents, provided some kind of an interesting evening or afternoon for their friends who assisted in making up this nice sum. I beg therefore, in this way, to thank most heartily all who assisted them, and especially the "four girls" themselves, for their very kind help. Let me add that if any of these, or other friends, should be passing through Nagoya with time or inclination to see for themselves what the Yoro-In is like, I should be most happy to afford them an opportunity of doing so. They would find some of the old men sweeping up the pebbles or making straw sandals; the women, cooking, washing, or making and mending clothes under the direction of a matron. From 9 a.m. till noon the boys are in the school room, with some other poor children from the neighbourhood, and in the afternoon from 1 till 5 o'clock they are to be found in the work room learning to make and paint porcelain and other earthenware. This work was only begun about a year and a half ago but one boy has already become proficient enough at it to earn enough to pay for his board and we hope to have others in a similar position before long.

Yours,
J. COOPER ROBINSON.
Nagoya, Dec. 16 1897.

THE CLUB HOTEL, LIMITED.

An extraordinary general meeting of shareholders in the above company was held at the Hotel on Monday afternoon to consider and sanction a scheme for the improvement of the building of the Club Hotel, at No. 5-8, Yokohama, by adding thereto eight rooms and making other improvements to the buildings, and to consider and sanction the increase of the capital of the Company by the issue of two hundred and fifty additional shares of one hundred dollars each and to sanction the allotment of such shares to Shareholders of the Company in proportion to the number of shares held by each Shareholder on the 30th November, 1897.

Mr. Litchfield presided and there were present Messrs. H. C. Pigott, S. Thompson and R. Ward, Directors, and Messrs. M. Russell, E. Jones, Cummins, Bennett, Dare, G. Booth, Robinson, C. D. Moss, J. W. Hall, and C. Fearon, Secretary.

The Chairman read the notice convening the meeting and stated that the scheme for the improvement of the hotel was to construct in the rear of the premises, where the lavatories now were, a three storied structure, with improved accommodation on the ground floor, and above this two storeys for bed rooms and chambers. This would give them eight extra bed rooms. He considered that in justice to their manager, with whom they had entered into a new agreement, they were bound to allow him every chance to do his best for the shareholders. The estimated cost of the new structure was 8,200 yen, and for gas, hot water, etc., 350 and 1,500 yen—in all about \$10,000 for the new quarters. If they could not enlarge the present building they must make it lighter and cleaner, and it was proposed to make a skylight above the hall, the cost of which would be \$13,000, or allowing for something over the estimate, say \$15,000 at the outside. In addition to this they required something for furniture for the 8 new bed rooms, say \$200 or \$250 per room, including bed linen. It was also suggested that when these repairs had been effected it would be advisable to obtain a new steam launch. To carry out this scheme the Directors brought before the meeting the proposal to increase the capital, which they were empowered to do by the articles of association. With regard to the mode of allotment proposed it was not essential to carry it out exactly as proposed, provided the principle laid down was adhered to; the other parts of the resolutions spoke for themselves.

Mr. PIGOTT proposed the adoption of the first resolution, which was—"That the plans and estimates laid before this meeting are approved and the directors authorized to carry out the construction of the new building in accordance with the same."

Mr. HALL seconded the motion and it was carried unanimously.

Mr. BENNETT asked how long it would take to

carry out the proposed changes, and Mr. PIGOTT replied, about two and a half months.

Mr. PIGOTT then put the second resolution, which was as follows, to the meeting:—

II. (a).—That under the powers conferred by the Memorandum and Articles of Association the capital of the Company be increased by the issue of two hundred and fifty New Shares of \$100 each paid up in full, in addition to the sixteen hundred like shares already existing.

(b).—Such new shares shall rank for dividend as and from the 1st day of April, 1898.

(c).—Such new shares shall be offered to the shareholders on the register on the 30th day of November, 1897, on such terms and conditions as the Board of Directors shall determine, in the proportion of one new share for every six existing shares held by them, and such offer shall be made by notice to be issued not later than the 31st day of December, 1897, specifying the number of the new shares to which the Shareholder is entitled and the rate of issue of such shares, and stating that the offer will be deemed to be declined unless an acceptance of such offer in writing is delivered to the Secretary of the Company or to the Company's Bankers, the Hongkong and Shanghai Banking Corporation, at Yokohama, on or before the 15th day January, 1898, together with such sum per share for each new share so accepted as the Board shall determine.

(d).—Upon acceptance and payment within the time above-mentioned the Shares so accepted and paid for shall be allotted accordingly.

(e).—After the 31st day of March, 1898, any Shares not then accepted and paid for shall be disposed of by the Directors either to Shareholders or two others as they may deem advisable at the best price obtainable therefor, not less than the nominal value thereof, and any premium obtained thereon shall be dealt with by the Board in their discretion.

In reply to a question, Mr. PIGOTT said none of the new shares would be offered to non-shareholders. They would all be taken up by shareholders at par. There would be none left over.

Mr. BENNETT seconded Mr. PIGOTT's second resolution and it was carried *nem con*.

A vote of thanks to the Chairman, proposed by Mr. Booth, brought the proceedings to a close.

NIPPON RACE CLUB.

ANNUAL GENERAL MEETING.

The annual general meeting of members of the Nippon Race Club was held at Keil's Building on Wednesday afternoon, the President, Sir Ernest Satow, K.C.M.G., being in the Chair. There were also present, Dr. Wheeler, Vice President, Messrs. Gerard Lowder, W. W. Till, Tom. Thomas, W. F. Mitchell, V. Blad, S. Isaacs, A. C. Read, H. Blum, E. Knaff, A. Dumelin, W. R. Bennett, M. R. H. Harris, and H. Tennant, Secretary.

At five minutes past four o'clock the CHAIRMAN rose and said—Punctuality, gentlemen, is the soul of business, and I think that we should proceed to the business before us, without waiting longer for the attendance of members still absent. The first thing upon the agenda is to read and confirm the minutes of the last annual general meeting, but I think it would save time if some gentleman would propose that the minutes be taken as read.

Mr. THOMAS proposed and Mr. DUMELIN seconded that the minutes be taken as read.—Carried.

The CHAIRMAN—Our next business is to receive the report and accounts of the Executive Committee. They have been printed and circulated and doubtless are familiar to all of you. The Committee, as usual, have to congratulate you upon successful meetings and also upon the fact that we have a larger credit balance than we had in 1896.

Dr. WHEELER proposed and Mr. ISAACS seconded that the report and accounts be taken as read and duly passed.—Carried.

The ballot for the new executive committee was next taken, Messrs. A. C. Read and W. R. Bennett being appointed scrutineers. The ballot resulted in the re-election of all the old committee—Messrs. W. W. Till, Arakawa Yoshitaro, E. Knaff, T. Thomas, V. Blad, S. Isaacs, and J. C. Nicholson.

The CHAIRMAN thought that these gentlemen would consent to resume their arduous labours, and as silence gave consent he took it that they would serve again for another year.

Mr. TILL—Quite so.

Mr. LOWTHER proposed and Mr. HARRIS seconded a vote of thanks to the Committee for their past services.

This was carried with acclamation.

The CHAIRMAN said that the business of the meeting had thus been brought to a speedy con-

clusion. He thought, casting his mind back to the meeting of two years ago when they had such a long discussion about troublesome *momban*—(laughter)—and other things, that they were to be congratulated upon being a club without a history and therefore without complaints.—(Laughter.) The meeting now stood adjourned till that date next year.

Mr. TOM THOMAS—Before we go I should like to propose a vote of thanks to our Chairman and President.—("Hear, hear.")

Mr. TILL seconded.—Carried.

The CHAIRMAN—I thank you, gentlemen. I have always considered myself a most unsatisfactory President, owing to my absolute ignorance of the subject and also to my inability to win races.—(Laughter and applause.)

The meeting then separated.

REPORT.

In presenting the accounts for the year 1897, the Executive Committee have again to congratulate the members on a highly successful season.

Compared with last year the accounts show a notable increase. In improvements and repairs the Committee have expended 2,100.00 yen as compared with 1,700.00 yen in 1896, an increase of 400.00 yen. The income of the Club has increased, the Pari Mutuel and Lotteries yielding 4,029.56 yen as compared with 3,956.32 yen in 1896, an increase of 2,073.24 yen, and the Members subscriptions 3,160 yen against 2,730 yen, an increase of 430 yen. This expansion of revenue enabled the Committee to offer in prizes 12,110 yen as compared with 9,805 yen last year, an increase of 2,305 yen.

The contemplated addition of land, mentioned in the last Report, and sanctioned at the General Meeting, has been completed at the estimated cost of 2,150 yen. A new grass cutter has also been added to the Club property at a cost of 200 yen.

A lease for a large plot of ground, 1,400 *tsubo*, has been entered into for a term of 20 years, and the rent for half that period figures in the accounts, namely, 420 yen. This acquisition was found necessary owing to the great increase in the number of carriages attending the Races, the Committee considering it best to provide space for them if possible. This ground will in future be available for turning out ponies. In spite of the above-mentioned expenditure the Club closes the year with a credit balance of 4,284.87 yen against 4,721.52 yen at the end of 1896.

Although considerable improvements have been effected during the past twelve months your Committee are of opinion that further sums have yet to be spent before the race compound can be considered in proper order.

The Club's lease of a portion of the present carriage paddock expires in May, and it may become necessary to purchase the ground at cost of 2,387.10 yen.

In accordance with Rule 4 the Committee now retire.

THE EXECUTIVE COMMITTEE.

Yokohama, Dec 17th, 1897.

THE NIPPON RACE CLUB IN ACCOUNT CURRENT WITH THE HONORARY TREASURER FOR THE YEAR 1897.

Dr.	Yen.	Cr.	Yen.
To Purchase of Ground as decided at General Meeting, December, 1896	2,150.00		
" Rent of Race-course for 1897	790.00		
" Rent of New Carriage Paddock, rent in advance for 10 years	420.00

V. HEAD, Hon. Treasurer.

Examined the Subscriptions and Vouchers with the books and found same correct.

S. WAKINO.

THE CURE OF DOUBT.

The following sermon was preached at the opening of the recent annual meeting of the West Japan Presbyterian Mission, by the Rev. G. W. Fulton of Fukui, Echizen. The sermon was listened to with much interest and profit by all. At the earnest request of the Mission, Mr. Fulton somewhat reluctantly consented to allow the sermon to be put in print. It is therefore by order of the Mission, and through the courtesy of the *Japan Mail*, now offered to the public in the hope that many readers may find it both interesting and helpful.

T. T. A.

ANNUAL SERMON BEFORE THE WESTERN JAPAN PRESBYTERIAN MISSION AT ITS SESSION IN OSAKA, NOV. 11TH-17TH, 1897. PREACHED BY THE RETIRING MODERATOR, REV. G. W. FULTON, FUKUI, ECHIZEN.

Text: Luke 7, 20:—"Art Thou He that should come, or look we for another?"

It is not necessary for me to explain whose these words are, or in what connection they were spoken. As to the reason for their utterance there are differences of opinion. There are those who think it is belittling to the "greatest born of woman," and inconsistent with the praise bestowed by Christ, to imagine John at this juncture to doubt as to the person and work of the Redeemer; and they would make of this incident merely a silly attempt of John to work faith in his disciples by bringing them into contact with Jesus: hoping that if they put this question to Jesus, it would call forth an answer winning them for all time to the Saviour whom he came to announce. But that as for John, he never harboured any thought of Jesus other than he had preached in the days of his successful ministry in the wilderness and on the banks of the Jordan.

But when we take into account John's surroundings, and spiritual depression, which would naturally result from long confinement in a Galilean prison; when we consider also the comparative meagreness of John's knowledge of Christ, the deficiency of his ideal of what Christ should be as indicated in his fiery discourses; and when we pause to reflect that his great prototype, even the courageous and mighty Elijah, had his moments of weakness, and could leave on record the scene under the juniper tree; and then too when we remember that Christ said in His reply, "Go and tell John," so and so, it seems better to accept the commoner interpretation that John's message was the offspring of doubt. That the great forerunner, from stress of circumstances, from deficiency of knowledge, from imperfection of faith-vision, here for a time gave way to human weakness, and came to doubt the very essentials of his life-purpose and ministry.

Calling two of his disciples he sent them to Jesus saying:—"Art Thou He that should come, or look we for another?" We see here the deadly disease; Jesus sends back the cure:—"Doing in their presence many of His marvellous works. He said:—"Go your way and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached. And blessed is he whosoever shall not be offended in me."

The subject suggested by this incident is The Cure of Doubt, and I trust a brief consideration of this topic may begeth and helpful. But prior to suggesting the remedy, it is in order to refer briefly to the disease itself. First then, two or three thoughts on the general subject of doubt.

As one of these, it is to be born in mind that every one is liable to an attack of this malady. Perhaps no one would ever have thought of John being one of its victims. And yet here he is prostrate in its grasp. It may come to us like some hidden germ gnawing away secretly at the vitals of our faith; it may be the result of deliberate exposure, from association with sceptics and the perusal of sceptical literature; it may be as from contagion, when the air is full of it, and when the fashion of the age is to be liberal in theology; or it may be contracted while in the path of duty, in the pursuit of truth, as the result of honest inquiry. When the mind, failing to find entire rest in the

old categories, and compelled to face the many new problems constantly demanding solution, starts out to seek new views to truth, and on the way unfortunately falls into this slough of despond, "Let him that thinketh he standeth take heed lest he fall."

In the security of Eden this insidious questioner found its way, and poisoned the mind of our First Parents, and out in the wilderness hesitated not to assail the pure mind of Christ. Many of the pillars of the church, men of loftiest mind and most pious hearts, in all ages, have confessed to seasons of mental conflict, when the very essence of the faith hung in the scales of doubt; and it does not cease to be so now.

The most recent and startling instance perhaps is that of Rev. B. Ray Mills. That mighty man of God, who swayed multitudes by his earnest faith, and the proclamation of a pure and simple gospel, has, within a few months, been caught in the meshes of doubt, and in the most inexplicable manner seems to have made utter shipwreck of the Faith. Having preached to others, he has become, in a sense at least, a castaway. Again I say, "Let him that thinketh he standeth take heed lest he fall."

Another thought:—A period of doubt, though grievous at the time, and exceedingly dangerous as to its consequences, may in the end be one of the greatest of blessings. A man is stricken with disease and for a while all his energies are prostrated, and his life hangs in the balance. But if recovery is complete, he is freed forever from the germs which make him a prey to that malady, can walk with freedom among those who are afflicted with it, and from the resources of his own experience can afford sympathy and help such as he was incapable of before.

And so with the man who has passed through a period of doubt. For a while he will be spiritually prostrated. His religious life will be unsatisfactory, and religious activity well nigh impossible. The shadow of death hovers over all that is vital in his creed and life, and he knows not what the issue may be. But if he recovers from this spiritual malady; if Faith emerges from the conflict triumphant with victory, that man has gained an experience that will strengthen himself, and be a constant succour to others in distress. Jesus said to Peter, "Simon, Satan hath desired to have you that he may sift you as wheat; but I have prayed for thee, that thy faith fail not; and when thou art converted, strengthen thy brethren." A man whose faith has been once sifted in the pitiless veil of doubt, has doubtless rid it of much of the chaff of theory, and the dust of tradition, and with greater confidence can reveal to men the pure wheat of a practical, experimental, and sincere religion.

Further, a few words in regard to the proper treatment of doubt. In what has been said, I do not wish to be understood as in any sense meaning to encourage the spirit of doubt. A man is far happier and more useful if he is fortunate enough to escape it. That early morning on the lake, when Jesus bade Peter come to him walking upon the waters, as long as Peter believed he was successful and full of ardour and joy; but when doubt arose in his mind, he felt the terrors of death within him. Perhaps, indeed, there is no suffering to be compared to the mental distress of the man standing on the bridge of faith uniting two worlds, who feels the pillars now begin to totter beneath him. And what man is there who can have any heart to persuade others of that which he himself stands in doubt. True faith is health and life to the soul, and is that which is to be desired and striven for by everyone.

But it is the privilege of very few perhaps to abide constantly in this ideal state. Living in a world of doubt and unbelief, it is almost impossible not to be affected at times by the contagion about us. Since the days of Christ there has scarcely been any time when some citadel of the Faith has not been in process of attack. Round and round the assault has been made, and we are accustomed to regard such a state of affairs as not really injurious, but in the end profitable to Christianity. Constant motion keeps the waters from becoming foul. Such being the case, the men who are alive to the spirit of the age in which they live, cannot fail to take account of the problems under the fire of discussion. The questions raised are not usually silly ones, but such as are supported by strong argument and reasons. Our own age is no exception. The religious world to-day is full of questions whose bearing affects vitally the fundamentals of our faith. Scholarship, devout scholarship even, is divided as to their solution. The study of Comparative Religion and the Criticisms of the Scriptures have become the parents of a multitude of troublesome off-pring, which are now cast upon the world awaiting its disposal of them. Their mission is to create doubt and uncertainty everywhere.

One by one they come in turn to touch the whole gamut of our theology. How are we to treat these doubts?

One way is simply to stamp them out by force of will:—"I will have none of these things. I will consider no problem affecting adversely the Faith of our Fathers. I will read no literature on the subject, or discuss with anyone the merits of the question." We have in the world a considerable number of such persons, who doubtless have their use.

I believe if a doubt arises in our minds, we ought to give it honest recognition and a fair hearing. These questions are too vital to be pushed aside as mere troublesome intruders. For the sake of our own peace of mind as well as for the sake of obtaining power rightfully to influence others, we ought to face these difficulties fairly, go to the bottom of them, and if they are removable, why, better pull them up by the roots rather than lop them off above ground, to appear again whenever the spring rains come.

But while we owe to every doubt honest recognition and thorough consideration, at the same time they ought to be conservatively treated and conservatively acted upon. The great temptation is when one's mind is all aroused with new thoughts and new theories, to mistake temporary conclusions for real faith, and to proclaim loudly with tongue and pen one's adherence to positions and views which a more mature consideration would pronounce dangerous and untenable. From having yielded to such temptation many men have injured themselves irretrievably, and have lost an influence which they never could regain even though they sought it with crying and with tears. It occurs to me it would be well if we were to give every doubt or new theory about two years probation on the average. Half that time for thorough study and investigation, and the other half for mature reflection. Through such a gateway not many traitors would be allowed to enter the citadel of our faith.

In the second place, we are to consider the cure of doubt. Regarding sound faith as life and health to the soul, and as the *summum bonum* to be sought after, where are we to go for relief when questions affecting the vital realities of our spiritual lives come surging in like waves upon us, from the vast sea of doubt?

I shall attempt to answer this only from the human side. It is taken for granted that every one will first of all constantly and earnestly seek the guidance of the Divine Spirit who has been promised as the guide unto all truth. But from the human side, what aids shall we seek, what powers employ to secure the rest and peace and power of a pure, sincere, and intelligent faith?

(1).—We may go to the Creeds of Christendom. We may seek encouragement from the testimony of the saints of all ages. No man will hastily set aside that which has been the belief and comfort and stay of millions of the best men and women the world has ever seen. This will always remain a checking influence to the ravages of doubt and liberal thought.

But I venture to say it will rarely if ever give peace to the troubled mind. Man is so constituted as to believe that progress is the natural law in everything; and that each age is competent to improve on the past. Hence it will never be possible to bind down one's faith by chains of traditional belief. It may be that the faith of the Fathers is correct and not to be improved upon, but the attempt to force belief upon ourselves just because the Fathers have held it, will always fail in the extremity. A similar logic would serve to fasten Buddhism forever upon these Oriental nations, the very thing which we wish to frustrate.

Or again, we may seek aid from the deliverances of ecclesiastical bodies of our own time. This too will have its weight and influence. Like the voice of the Fathers, the voice of the Brethren who we love and honour, will command our confidence and consideration. But this too, like the former, is of an external character, and will not suffice to quench the fires within. The fact is, with a full knowledge of their faith, the doubt has already arisen in the mind in regard to the belief of the Fathers and the Brethren, and mere testimony and reproof from these sources must fail to persuade or satisfy. Like as the mere command of the physician cannot wipe out disease from the earth, so the authority of the church, whether past or present, will be unable to secure the faith of its adherents from the ravages of doubt.

(2).—We may turn to Reason. Doubt is a fluctuation of mind arising usually from lack of knowledge or evidence. It is the natural and necessary thing to use our God-given faculty of reason to secure again the equilibrium of faith. If knowledge is defective the intellect must be brought into play to furnish argument, weigh positions, and give judgment. Our reason

when rightly guarded is the strongest ally to faith. Many of our doubts and fears will flit away like shadows when we turn the search-light of Reason upon them. Faith's position will only become clearer in the light of reason, and stronger when buttressed and fortified by its invulnerable proofs. We need not fear to think freely; we need not hesitate to investigate widely; we need not shrink from reasoning fairly, whenever doubt comes to throw suspicion upon any of the tenets of our Faith.

But we must never forget that Christianity is a supernatural religion. Reason will never succeed in completely scaling its heights or sounding its depth. In the nature of things there are some truths of the spiritual world too high and too deep for men's minds. No doubt we are coming to know more of these things, but it is the glory of Christianity that it is incapable of being exhausted by man's reasons. Failing to recognize this, and wishing to make the sway of reason complete, how many noble and exalted minds have we seen plunged into the pitiful despair of a hopeless rationalism.

(3).—When reason fails to answer doubt's questions, where shall we go? It is man's happy fortune that he is endowed with a certain practical sense which he will depend upon, without waiting for reason's deductions, and trust even when reason fails. It may be a species of instinct, or the result of experience, or a combination of these; at any rate it is something which we may all possess, and whose suggestion we are accustomed to act upon.

This faculty becomes a most valuable aid in solving the questions of doubt. It draws from what it sees and hears and feels and knows and has experienced, and its conclusions are most emphatic. Scepticism comes, bringing its host of unanswerable problems and irreconcilable difficulties, and would fain persuade the mind that such a medley of contradictions and impossibilities cannot be the true way of life for man. Practical sense reaches down, gets hold on experience and answers:—"Yes, there are problems here I cannot answer, and difficulties I cannot reconcile, but I know well the history of my own life: I remember what I was before, and I know what I am now. I will not be deceived into throwing away that which has wrought this mighty change within me." Or again it takes hold upon fact. It looks out upon a world of ignorance and misery and sin, and notes the changes being wrought by Christianity. It sees enlightenment following everywhere in its train; it sees happiness and prosperity unheard of before; it sees purity and righteousness gradually filling the earth; and in the very face of doubt it cries out: This must be the power of God.

It makes good use also of the blank alternative. When doubt comes to cast its shadow of suspicion everywhere, when perplexed and troubled the mind is tempted to give up everything, the man's practical sense comes to the rescue, and like the disciples in Galilee he says:—"To whom shall I go? If Christianity be not true, then where is truth to be found? If not to Christ, then to whom shall I turn for the solution of the many mysteries of life?" Standing there upon the brink of that precipice, and facing the blank abyss beyond, the man comes to himself and says:—"Until I find something better I will not give up what I have. We thank God for this faith in our practical sense. It is a check to the bold ambitions and ventures of our reason, and is the most successful opponent of doubt.

It is important to note that Christ's answer to John's disciples was practical. He spent no time in quoting creeds to them, nor did He attempt to convince them by any process of argument. He showed them a sample of what He was doing, told them to read His character and mission through that, and to remind their master of the blessedness of abiding in the Faith. And so to-day it is the real practical power of Christianity—what Christ is doing in one's own heart and in the world, that furnishes the bond that binds so many millions unchangeably to him. When Thomas was plunged in doubt and melancholy, refusing to hear argument or to believe any human testimony as to the resurrection of Jesus, it was by simply showing him the nail-prints in His hands and feet, and the spear-thrust in the side, that won from Thomas that heartfelt confession of faith and allegiance. And so it is because men have beheld Jesus in a vivid, real, faith-vision, that they are willing to commit their all unreservedly to Him.

Thus man's practical reason, whether relying upon the sure testimony of experience, or the no less certain witness of actual fact; or appealing to the common sense principle of holding on to the good until something better appears; man's practical reason, I say, will hold the castle of Faith, even when all other friends desert it, and loes gather thickly around. Let me say to all who are

harrassed with perplexing doubts, or who are puzzled to know where to stand amid the conflicts of the present time, or who are trembling as to the issue of the battle waging about us—let me say to such:—Give more scope to your practical reason, let it have a freer hand in settling the problems of faith; do not fail to consult it wherever doubt and uncertainty exist. It will surely teach wisdom; it will supply strength; it will give peace. It will, in fact, be the very friend in need.

In conclusion, I would have you note that this question of John expresses the very sum and substance of present day doubt or literal thought: "Art thou He that should come, or look we for another?" To be sure many subordinate questions are raised, but if you examine the main trend of all, you will find that it points ultimately to these two questions:—Is Christ the final messenger? Is Christianity the final religion?

Are we to hold as heretofore to the unique position of Christ, as the one that was to come from God? Or are we to make him one of many? A great moral and religious teacher, the last and best of all it may be, but still only one of many who were to come into the world?

Is Christianity the one religion for man? The only God-preached way of life, the only hope of salvation? Or is it to be classed only as the last and best in the religious development of the race? With the final religion yet to come, an electric composite of the best that is in all? These are the great questions that include all the others.

Pure reason, unguided, unguarded, adopts the latter position. Liberalism, which is rationalism, will inevitably land us here. I do not say that all reason is on this side. For Christianity is certainly rational in a very true sense. But the whole tendency of modern liberalism following reason as its unerring guide is in this direction.

We must look to the practical sense of the Christian Church to rescue Faith from this situation. And it will not fail to do its duty. It will answer that the Christ whom we have believed—the unique Christ, the Divine Christ, the Living Christ—is necessary to satisfy the needs of the human heart; that the sinless life and perfect character; the matchless teaching and wonderful works of Jesus while upon earth; and the power for truth and righteousness for holiness and love which He even now wields over the world by His invisible Spirit, these proclaim Him to be the one who was to come. We may not be able fully to understand the mystery of His person, the meaning of His salvation, or the power by which He is surely bringing the world to His feet, but we recognize the facts, real, visible, and proved in our experience, and we dare not call Him other than the Only Begotten of God. We will not "look for any other."

It will answer also that Christianity has in it already all that is good in other religions, is itself complete. Complete in doctrine and morality; perfect in ideal and reality; sufficient in its power to accomplish all that religion is meant to do. It may leave some difficulties unsolved; it may present some mysteries too deep for us to fathom; but it has been tasted and found sweet; it has been tested and found trustworthy. Through a history of nearly two thousand years it has satisfied human need in every known clime and under every conceivable circumstance, and has shown itself irresistibly to be the power of God to elevate, to purify, to save mankind. We accept this as from God, His own declared way of life for man, and we will not "look for another."

Both the person of Christ and the religion of Christ demonstrate themselves to our practical reason as beyond improvement. We can imagine no higher conception. Faith's position is abundantly justified.

Reverting again to the Galilean crisis, you remember when the multitude were turning away from Christ He said to the Twelve in that tender, entreating way:—"Will ye also go away?" They, too, perhaps, had their doubts, were seriously perplexed at some of His teaching; and may be some of them were about to follow in the footsteps of the multitude. But Peter—practical Peter—came to the rescue and saved the cause:—"Lord, to whom shall we go? Thou hast the words of eternal life. And we believe and are sure that Thou art that Christ, the Son of the Living God."

And so shall it be with us. Doubt will continue to work its ravages in the world, and we shall not escape its insidious attacks. But like Peter our practical sense, divinely illumined, will be our final deliverer, and his clear, positive, joyous conviction will ever remain the faith of the Church,—and our faith.

U.S. CONSULAR COURT.

(Before F. J. GOWRY, Esq., Consul-General and Judge, sitting with Associates.)
MONDAY, DEC. 20TH.

HAY *versus* THE AMERICAN TRADING COMPANY.

In the U. S. Consular Court on Monday morning, before Mr. J. F. Gowry, Consul-General and Judge, proceedings were resumed in the suit of A. Stanley Hay *versus* the American Trading Company, for libel, claiming damages to the amount of *yen* 10,000, which were adjourned a week ago. Messrs. Varnum and H. J. Davidson were sworn as Associates.

Mr. Litchfield opened his case by stating that plaintiff sued the defendants for damages, the defendants having libelled the plaintiff by publishing in certain Japanese papers statements to the effect that the plaintiff had been dismissed from his connections with the defendant firm for dishonest conduct. The notice was addressed to plaintiff's constituents and was calculated to injure his character and business. Counsel then read the petition and answer, as follows:—

The petition of A. Stanley Hay, the above-named plaintiff, shows as follows:—

1. The plaintiff is a citizen of the United States of America resident in Yokohama.
2. The defendant Company is a corporation incorporated under the laws of the State of Connecticut in the United States of America and carrying on business at No. 28, Yokohama.
3. From the year 1895 to 30th June, 1897, the plaintiff was manager of the engineering department of the defendants at Yokohama aforesaid, under an agreement with the said Company in their behalf.
4. At the time of entering into the agreement with the defendant Company to manage the said engineering department the said plaintiff was the duly authorized agent in Japan for the Worthington Pumping Engine Company and other manufacturers.
5. On the 22nd day of August, 1897, the defendant Company falsely and maliciously wrote and published of the plaintiff in Japanese language in the *Kogyo Zasshi*, a journal of engineering published in Tokyo, Japan, the words following, (the Japanese ideographs are here quoted) which said words being translated into the English language have and were understood by the persons to whom they were so published to have the meaning and effect following, that is to say:

There is a person of the name of A. S. Hay. He was formerly connected with our Company but in consequence of his dishonest conduct the connection has been severed (meaning thereby that the plaintiff had been guilty of dishonesty and had been removed from the position in the American Trading Company in consequence of such dishonesty); notwithstanding this fact, however, the person in question (meaning the plaintiff) is advertising himself as the agent of the manufacturers of the pumps described on the foregoing page, although he possesses no authority or right to do so (meaning thereby that the plaintiff had not and never had any authority from the Worthington Pumping Engine Company to act as their agent).

Should he continue this improper conduct in future he will be dealt with accordingly.

American Trading Company, No. 28, Yokohama, and No. 17, Kobe.

6. That by reason of the said advertisement the said plaintiff has suffered much injury to his character and distress of mind and has been much prejudiced in his business, and the said plaintiff claims ten thousand *yen* as compensation therefore.

The plaintiff therefore prays this honourable Court:—

1. That the said defendant company be ordered and decreed to abstain from further publishing the advertisement aforesaid.
2. That the said defendant Company be decreed to pay the said plaintiff the aforesaid sum of ten thousand *yen* as damages.

The answer of the defendant Company to the petition of the plaintiff:—

1. They say that they are not guilty.
2. They admit the allegations contained in the first three paragraphs of the petition.
3. In answer to paragraph 4 of the petition they say that although the plaintiff was at some time prior to the 3rd day of February, 1896, the Agent for the Worthington Pumping Engine Company, the defendant Company on the 3rd February, 1896, and to the knowledge of the plaintiff, became the sole Agents in Japan for the said Company, and have remained so ever since.

4. The "Kogyo Zasshi" or "Engineering Magazine" is a journal printed in Japanese ideographs and published twice a month in the city of Tokyo.

5. In the numbers of the said journal which were issued in the year 1897, from the months of January to September inclusive, the plaintiff published an advertisement in which he represented himself to be the sole Agent of the Worthington Engine Company; and upon the said advertisement being brought to the notice of the defendant Company, they caused to be inserted in the said journal, as they well and truly

and lawfully might, an advertisement of which the following is the translation—"Worthington Duplex Pumps and Condensers, Boiler Feed Pumps, Tank Pumps for Railway Stations and Domestic use, Hydraulic Pumps, Marine Feed and Bilge Pumps, Delivery and Irrigation Pumps, Fire Pumps for Houses, Factories, Stations, etc., Independent Jet Condensers, and Air Circulating Pumps. Many of the above Pumps are now in use in Japan, and no complaints have ever been made by Parties for whom we have imported them.

The American Trading Company, No. 23, Yokohama and No. 17, Kobe, Sole Agents for Japan."

6. Immediately following the advertisement aforesaid, the defendant Company, as they well and truly and lawfully might, caused to be inserted in the said journal the notice which is set out in ideographs in the fifth paragraph of the petition of the plaintiff, and which is the libel complained of, excepting only the heading thereof, which was inserted at the office of the said journal; but the defendant Company deny that the said words or ideographs being translated into the English language have, or were understood by the persons to whom they were published to have the meaning and effect attributed to them in the petition of the plaintiff; and they also deny that the express averments of the petition have the meaning attributed to them by innuendo:

7. The defendant Company deny that they falsely and maliciously wrote and published of the plaintiff the words or ideographs of which the notice aforesaid is composed, and they say that the said words or ideographs and the matters contained in the alleged libel are true in substance and in fact.

8. And for fuller and more particular justification of the alleged libel and of the publication thereof the defendant Company say that as the agreement and business connection of the plaintiff with the American Trading Company was about to expire on the 30th day of June last, they on the 9th day of May wrote and offered to continue to employ him for a further period of three years and on an increased stipend, in the capacity he then held, viz—*as Manager of the Engineering Department of the defendant Company*; that on the 11th day of May last, in consequence of certain matters and things that had come to their knowledge, a conversation was had between the President and the agent of the defendant company and the plaintiff, in course of which the plaintiff was asked whether he had not applied for and received and neglected to account for certain commissions or rebates from suppliers of goods covered by contracts and orders passing through the Engineering Department of the defendant Company; that the plaintiff denied the accusation implied in the said question; that the said denial by the plaintiff was untrue, inasmuch as he had received a sum of \$3,231.68 from the Ingersoll Sargent Drill Company of New York as commission on account of goods purchased from the said Company by the defendant Company in execution of an order obtained by the plaintiff as *Manager of the Engineering Department*; that whereas it was the duty of the plaintiff to have reported the receipt of the said commission and to have paid the same over to the defendant Company immediately on the receipt thereof by him, he nevertheless concealed from them the fact of his having received the said commission and neglected to pay the same over to the defendant Company until after his said concealment and neglect had been discovered by the defendant company; by reason of which improper conduct on the part of the plaintiff, the defendant Company refused further to consider the renewal of the agreement and business connection between themselves and the plaintiff, and informed him of their determination to sever the same.

Save as aforesaid the defendant Company do not admit any of the allegations contained in the petition of the plaintiff.

Signed J. F. LOWDER,
Counsel for the defendant Company.

Continuing, Counsel said that although the defendants deny the meaning ascribed by plaintiff to the Japanese notice, they accuse him of appropriating certain commissions. If the defendants had stopped at notifying in the advertisement that plaintiff's connection with the American Trading Co., and his agency for the Worthington Pump Co., had ceased, they would have been within their rights; but when they accused plaintiff of dishonest conduct they laid themselves open to a charge of libel. Counsel then gave a summary of plaintiff's career for the last few years and the circumstances under which he obtained the agency for the Worthington Pump Co., of New York and other manufacturers in America. It then became necessary for plaintiff to make arrangements for financing these agencies. His first arrangements with the American Trading Co., was made with Mr. Stone in July, 1894, for one year at \$100 per month and 15 per cent. commission on all profits arising through the business done in machinery. From July '94 to '95 Mr. Hay did business under this agreement satisfactory to both parties, and in July '95 a fresh agreement was offered by the defendants for two years, under which the general charge of the American and English engineering department was given to plaintiff, who was to receive 25 per cent of the

profits, 200 yen per month being advanced to plaintiff, to be deducted from his share of the profits, the business being carried on as a department of the American Trading Co. The letter making this order was dated 9th July, 1895, but was not immediately replied to and on the 23rd July another letter was addressed by defendants to plaintiff, which was replied to by plaintiff on the same date, in which he desired to make certain changes in the proposed contract. He was willing to make a fresh contract receiving not less than 200 yen per month, and such other amount at the end of each year as would make up 30 per cent of the profits made on the business, plaintiff taking the sole control of the American engineering department and all business conducted in his name as manager, the American Trading Company appearing as the principal except in one or two cases of Japanese Departments in Tokyo, with which he had already made contracts direct on behalf of various companies he represented, and with the exception of other cases in which a mutual arrangement was arrived at. On the 26th July a letter was sent by defendants to plaintiff agreeing to the payment of 30 per cent. of the profits and the rest of the terms to be as proposed in their letter of the 9th July. This offer was accepted by plaintiff. That was the position in 1895 and on that agreement plaintiff continued to work till June 1897, when a change took place in the arrangement between plaintiff and the Worthington Pump Co., which elected to appoint the American Trading Co. as their agents in Japan. Plaintiff remonstrated with the Worthington Co., on their change and some correspondence ensued, and was closed on August last year in which it was definitely stated by the Worthington Co. that Mr. Hay was no longer authorised to represent them. In spite of this the business relations continued between the defendant firm and plaintiff till this year. On the 9th May, 1897, the defendants wrote to plaintiff offering to pay him 400 yen a month as manager of the engineering department, all business to be conducted in the Company's name, and plaintiff to be subject in all matters to the control of the company. To that letter plaintiff made no reply. On the 13th May plaintiff received another letter from the agent of the defendant Company in which reference was made to some conversation between plaintiff and Mr. Stone in which it was asked whether he had not applied for and received certain commissions. This was not replied to and led to a letter from the defendants breaking off the relationship between the defendant and plaintiff. There was a conversation between the plaintiff and the agent and president of the Company on the 11th May, in which plaintiff justified himself in receiving the commission referred to provided he accounted for it. The contract between plaintiff and defendants expired in June 30th, 1897, and was not renewed. After waiting a reasonable time plaintiff instructed Mr. Wallford to apply to defendants for a statement of the engineering account, and on the 21st July a letter was received by plaintiff from the defendants which was answered by his counsel on the 23rd July. These were the facts leading up to the publication of the libel complained of. The burden of proving the justification of the offensive matter lay on defendants.

At this stage the Court was adjourned till 1.30.

Upon the Court reassembling at 1.30 p.m., Mr. Litchfield called Mr. Kimura Iwata, editor of the *Kogyo Zasshi*, a trade journal published in Tokyo twice a month, who deposed—From time to time I have inserted advertisements in the paper with reference to pumps. I have published such in reference to the Worthington Pumps, under instructions from Mr. Hay. The copy of the journal produced was published on the 22nd August 1897. I recognise the advertisement marked 9 as having been published in that number. On the reverse page there is an advertisement, marked 10, in reference to Worthington pumps. The advertisement marked 10 was put in by Mr. Hay. The advertisement on page 9 related to Worthington pumps and was inserted according to instructions received from the American Trading Company. Copies of the journal are sold wholesale and also distributed by post and delivered by coolies. The persons to whom the journal is supplied are principally Japanese. We received instructions from Mr. Hay to discontinue his advertisement, but I do not remember the date; it was between August 22nd and the end of September.

Cross examined by Mr. Lowder—On page 10 there is an advertisement signed A.S. Hay, describing himself as sole agent of the Worthington Pumping Engine Co. in Japan. I received that advertisement from Mr. Hay about the 8th January, 1897; that was the first date it appeared in the journal. It was continued from that date till September, 1897. I do not remember if it ap-

peared in the number of Oct. 8th. I think it was from Mr. Hay that I received instructions to discontinue the advertisement. On page 8 of the number for 22nd August there is a notice from the American Trading Company that they were agents for the Worthington Pump Engine Co. I think this was the first publication of the advertisement. It is still continued. On page 9 of Exhibit A is also a notification headed in Japanese *Dai-ri Sasho*, also signed by the American Trading Company, which was inserted for the first time on the 22nd August. I received instructions from the company to discontinue this advertisement about the same time that Mr. Hay withdrew his. The heading *dai-ri sasho* (which meant, Counsel said, "fraudulent representation of agency"), may have been added in the office and not have been in the advertisement as ordered. The words *kin koku* mean, I think, "attention." The meaning of the latter could not be synonymous with the word *sasho*. If the advertisement was sent with the words *kin koku* at the top, and appeared under the words *dai-ri sasho*, the latter must have been added in the office. The advertisement was received in the Japanese language, as was also I think Mr. Hay's advertisement on page 10. I have never been asked by Mr. Hay to produce the original of the advertisement on page 9, headed *dai-ri sasho*. I have not got the original of that advertisement; it was returned.

Re-examined—I received the instructions to insert the advertisement on page 10 from Mr. Hay personally. The original of this I think was not returned, but was thrown into the waste paper basket.

Alexander Stanley Hay, the plaintiff, examined by Mr. Litchfield—I am a citizen of the United States, born of American parents in England. My parents have been settled in Philadelphia for 15 years. I went to one or two technical schools and served four or five years in engineering offices and workshops and on steamers between Philadelphia and Europe, as cadet and assistant engineer. When I came to Japan I was a year in the N.Y.K. and had been backwards and forwards to the States several times. I am a junior member of the American Society of Mechanical Engineers. I came to Japan first in 1892, as a passenger, left here in August 1893 for home, and returned to Japan in 1894. I made arrangements before I left Philadelphia with several engineering manufacturers to work for their interests in Japan. After I arrived here I called on the American Trading Company and saw Mr. Stone, who was then their agent. I had brought some introductions to him from New York. I had some conversation with regard to an engagement and afterwards received from Mr. Stone the letter dated July 2nd (Exhibit B). I replied to the letter July 6th accepting the terms offered with the exception of any commissions I might receive independent of the company. After writing the letter I may have had some conversation with Mr. Stone, and in July 1894 I became the so called manager of the engineering department at the American Trading Co., and the agent of the manufacturers who supplied the goods. There had been no engineering department in the company before. I took steps to do business for the agencies. For the first half year there was little to be done but after that I did a fair business. During '94 and '95 I did my best for the manufacturers in the United States and it resulted in orders being sent to them through the American Trading Company. Orders were sent to the Worthington Pumping Engine Company. I explained fully to Mr. Stone the circumstances of the agencies I held from the United States and showed him my agreements with the manufacturers. I came fully equipped with all necessary price lists and catalogues of the companies I represented, and after I had made my arrangements with the American Trading Co. I used to go with an interpreter looking up business and making contracts and I think nearly all the business done was transacted in this way and the goods shipped here to my specifications. In some cases special agreements were made that payment was not made till the machinery was set up and adjusted. I attended to all these matters personally. Prior to July 9 there was some conversation regarding a renewal of contract. I received the letters of 23rd and 26th July, and replied to the latter accepting the amended terms therein offered. That was my new agreement with the American Trading Company. Business increased considerably—there were a Japanese and myself in the engineering department. All orders to the United States were sent as before through the American Trading Co. and all the correspondence relating to orders came through and was kept by the company. When I renewed my contract in 1895 I still remained the agent of various engineering companies, among others the Worthington Pump Co. The change

in the agency of that company was first brought to my notice in 1896, by a cablegram received by the American Trading Co., as agents in Yokohama. The cablegram was to the effect that the selling agency had been transferred to the American Trading Co. I asked the agent for an explanation and was told that he had no explanation to give then, but that I should probably get one in the future. I was very much annoyed at the action of Worthington Pump Co.

At this stage the Court adjourned till 2 a.m. on Tuesday.

THURSDAY, DEC. 21ST.

On the Court resuming the examination of the plaintiff, A. Stanley Hay, was resumed. He further deposed—I asked an explanation of the defendant company with regard to the Worthington Company's agency. I did not get the explanation and subsequently wrote to the company, and received a reply. Afterwards there was considerable correspondence between the company and myself on the subject. The last letter I received from the Worthington Co. was on Sept. 20th of this year. On the same day that I received the letter I went to Tokyo and wrote out a letter in English to the editor of the *Kogyo Zasshi* instructing him to take out my advertisement of the Worthington Pump Co., and to put in another advt. to the effect that I had been agent of the Co. but had severed my connection with it, also that I was still prepared to supply various pumps, and give advice as to their application, etc. I am willing and desirous that the correspondence between the Worthington Company and myself should be produced. The contents of the principal letter communicated to one of the officials of the American Trading Company. (Letter from the Worthington Company dated 21st July offered, but objected to by Mr. Lowder unless the letter, or copy of letters from plaintiff to which it was a reply was produced)—I have not a copy of that letter. My advertisement in the *Kogyo Zasshi* of January 1897, was put into Japanese by the translator associated with me in the American Trading Co. It was not sent by me personally. It was continued until September last, when I gave instructions for its discontinuance. My attention was drawn to the advertisement which appeared in the *Kogyo Zasshi* of 22nd May by some Japanese. I received the letter dated May 9th from the American Trading Co. Previous to May 9th there had been no discussion between the defendant company and myself with regard to my commissions. I did not reply to the letter of May 9th in writing. I received the letter dated May 13th from Mr. Stone. There was a conversation between Mr. Morse, Mr. Stone, and myself on May 11th. It was in reference to the proposition made by the company to myself for a further contract for three years. The company offered to make a new contract for three years from July 1st, at a salary of 400 yen a month, and not share in the profits. On my part I was to attend as before to all engineering business, and turn over all my price lists, etc., and all correspondence to the company, and to be manager of the engineering department. I was asked to give an answer at once as the president was going to Korea on the 14th, and he wanted to settle the matter at once. I replied that before I gave a decided answer I wanted to write to my friends and get their opinion before I made a new contract. The agent asked me to put into writing such answer as I could give at the time. I said I was willing to do so but that a few days did not matter. On the morning of the 12th, having urgent business in Tokyo, I did not give any answer. On my return on the afternoon of the 13th I found on my desk the letter dated the 13th. On reading it I immediately went to the agent of the company and asked him the meaning of the letter. He replied that as I had not answered their letter of the 9th they intended to cancel the offer and that the president and agent desired to see me in the office. A conversation followed between us there. The agent said that by not replying to their letter I had slighted the president and himself, and that I had done something for which I was liable to be put in gaol by receiving and concealing money on account of business done between the companies with which I had done business on behalf of the American Trading Company. They asked me if I had so received money and I said I was willing to give an answer in Court but not to them then and there. Then the president gave instructions to the agent to take action against me in the U. S. Court on the 14th. At that time I had received some commissions from companies I had had dealings with, which I had put in my statement at the end of the contract time. I had told the president of the company on the evening of the 13th, at his house, what I had received and what I expected to

receive, and that I considered myself a partner in the engineering business; that any commission I received would be accounted for in my statement at the end of the contract and that I should also expect a statement from the company of any balance due to me on my share. He said he would speak to the agent the next morning, when I found they had taken no proceedings in the Court as threatened. The agent said if I had answered their letter of the 9th, it would have saved all this trouble. I continued in the employ of the company till the 30th June, when I received a letter declining to enter into any fresh agreement with me. Between the 13th May and the end of June I had made no proposition regarding a renewal of the contract. I was agent of the Ingersol Sargeant Drill Company. I had not succeeded in getting any orders to place with that company before January this year, when I obtained an order which I placed with them. I first notified the company that I had obtained a contract for such machinery. The orders went through the American Trading Company. (Press copy of letter addressed by plaintiff to the Ingersol Sargeant Drill Co. put in and read.)—I have no press copy book, only sheets. The order amounted to \$8,027, and was sent through the American Trading Co. The contract and estimate had been agreed to by the agent of the American Trading Co. and all the calculations were checked by the company. The order was sent in exactly the same way as other orders for machinery, through the American Trading Company. I received the reply produced, dated February 16th, from the Ingersol Sargeant Drill Company. In my letter of January 9th to the Ingersol Company, which was not copied, I had referred to the question of commission or discount. I wrote them that I was expecting to close this contract for machinery and that owing to my relations with the American Trading Co., and what I had seen the latter do in the case of the Worthington Co., I requested them to send any commissions or discount given on the order, direct to me. I cannot explain what I refer to regarding the Worthington Co. unless all the correspondence is produced, as it would show how the Worthington agency was taken away from me by misrepresentation. I was not satisfied with the way I was treated by the American Trading Company with regard to the Worthington agency. I received the letter dated March 30th from the Ingersol Sargeant Drill Company, covering a draft for \$1,600, or 3,221.68 yen as commission at 20 per cent. on the account paid by the American Trading Co. for drills, etc. I paid the money received as commission to the American Trading Co. and received a receipt dated May 18th, and I said at the time I intended it to have gone into my statement at the end of the two years. Thirty per cent. of this I considered was my own share. At that time, May 18th, I did not know how my account stood with the American Trading Co. I had asked but could get no particulars. Other commissions were received in the same way and put in my statement dated July 6th, and at the same time I asked for a full statement of account, but this I have been unable to get so far. The commission or rebate were different with various companies. There were more trade discounts from list prices and in some cases a special bonus to the representative for technical work done. I do not admit that I am bound to turn over into the business every commission, rebate, or bonus received by me, though in my statement of 6th July I put in every commission or bonus I had received or expected at that time to receive. The 20 per cent. allowed by the Ingersol Company was the only commission or rebate received from the company, and I considered it my duty as a partner in the business to put it into my statement at the end of my term, and acquainted the company of it at the time. With regard to the Worthington Company, I never received any commission direct from the Company, there was a discount of 25 and 5 per cent. allowed off the list prices, in the invoice.

At this stage the Court adjourned till 2 p.m. Upon the hearing being resumed after tiffin, the examination of the plaintiff was continued.—I severed my connection with the American Trading Company on the 30th June this year. Since then I have done very little business.

Cross-examined by Mr. Lowder.—When I said I had to find some one to finance my business, I meant to finance orders I took as agent for manufacturers in America. The agreement made between the defendants and myself in the letters dated July, 2nd, 1894, and July 6th, is what was referred to by my counsel in the statement that it became necessary to make arrangements for the financing of my business. After having heard the letters read I still believe it was my business, done by me through the American Trading Company. They were the financial principals and I

the technical principal. I cannot give an opinion as to who was the responsible principal. So far as the financial part was concerned the defendant company was the principal, and were responsible for payment of orders. I had the agencies, and we worked together for our mutual benefit. The note in red ink in the letter handed to me looks like Mr. Stone's handwriting; I think it is his. The note is dated 12th July and the letter which it is written on is my letter of the 6th July. The note is to the effect that a verbal arrangement had been come to between the defendant company and myself in the terms of the letter. I don't recollect making the verbal arrangement with Mr. Stone.

Mr. Lowder.—In your letter you raised an objection to paying in any commissions which you might receive in any business done otherwise than through the American Trading Co. Was that objection withdrawn in conversation with Mr. Stone?

Plaintiff.—In the first year I did agree to turn over to the defendant company all commissions that I might receive. I make a distinction between the first agreement in 1894 and the second in 1895-6 as regards paying over these commissions. In the last two years' contract I did not make any special agreement as to commissions or other moneys at the time I signed the contract. As I was a partner with the defendant company in the business I consider it was my duty under the second agreement to pass over to them all commissions received. I considered it a partnership because my remuneration was to be 30 per cent of the profits, 200 yen monthly being advanced to me, and at the end of the year the balance of the 30 per cent. was to be paid to me; on my part I put into the partnership my agencies, time and technical work. If there were no profits the American Trading Company were to have no claim against me for the 200 yen a month advanced to me. I signed my name as manager of the engineering department; not as managing partner. I had no power to draw money from the bank as a partner, nor to pledge the credit of the Company. If in supplying orders a loss was sustained, 70 per cent of it would fall upon the defendant company and I should lose my 30 per cent. I believe that between partners the utmost good faith is necessary. There was an accountant department in the American Trading Company, through which all payments for the engineering department passed. I said in examination that I believed myself entitled to hold the Ingersol Co.'s commission till the settlement of accounts at the end of the term of agreement.

Mr. Lowder.—I shall be glad if you will read through the letters on which our agreement was made, and point out where is your authority for holding back commissions.

Plaintiff.—There is nothing in the agreement referring to commissions or discounts. But I considered I was doing no harm whatever if I accounted for any receipts at the end of my contract time. I considered it my right as a partner to hold over any commissions I received till the end of the contract. I think it was the duty of the Company to account to me at the end of every year. I received an account at the end of June 1896. I did not receive any moneys in the first year of the second contract. It was my duty, at any time I was asked, to give information to the company as to any commissions I had received. I did not think it my duty to pay any commissions I received into the accountant's department immediately on receipt.

Mr. Lowder.—Whence did you obtain your right to retain such moneys for a single minute?—The moneys came from companies with which I had special contracts. I was the agent, and had friends in the different companies and naturally these moneys and commissions were sent to me. I do not claim any special right to retain such sums. I never said I had. I received the Ingersol commission I believe some time in the month of May; it may have been the latter part of April. I had an account in the Hongkong and Shanghai Savings Bank. I had no account with the Chartered Bank of Australia. I deposited the 3,200 yen commission with the Mitsui Bank, to which I transferred my account at that time. The sum was paid in on May 7th, perhaps a day or two after I received the cheque. I paid it into the Mitsui Bank instead of the accountant's department simply because I intended to hold it until the account between the American Trading Co. and myself was settled. I paid it in to my own account. I did not tell the company of it at the time. My account was not due till June 30th. I believed I had a right to hold the money provided I accounted for it at the end of my contract, or at any other time if I was asked about it. In the meantime the American Trading Co. ran the risk of losing the money if I was a dishonest man. I can only explain having no copy of the letter written by me to the Ingersol Co. on January 9th, by having forgotten to copy it or be-

ing in a hurry. I asked them in the letter to send the commission direct to me. The order sent on 18th January went through the American Trading Company, I don't remember whether the letter of 18th January was seen by anyone in the American Trading Co. I asked them in it to keep my correspondence confidential. My explanation for having given these secret instructions is that while I had been agent for the Ingersol Company for two years I had been able to do no business for them and I was afraid of being treated by the American Trading Co. in the same way as I had been in regard to the Worthington Pump Company, which resulted in my losing that agency, and its transfer to the American Trading Co. It is hard to estimate the money loss of the agency. It is now that I feel the loss, having left the American Trading Co. They did try to get the agency of the Ingersol Co. away from me, but I wrote to the company the mail before the American Trading Co. did. I did not intend to put the commission in my own pocket, but to turn it over at the end of the contract. You may have your opinion on that point and of course I have mine. I received from the Philadelphia Engineering Works \$100 gold. The date was some time in 1896; I believe in the second half. I think I deposited the \$100 in the Bank to my account. This \$100 was outside all commission and discount. It was put in my statement of July 6th 1897.

At this point the hearing was adjourned till 10 a.m. on Wednesday, the 22nd inst.

WEDNESDAY, December 22nd.

Mr. Litchfield appeared for the plaintiff and Mr. Lowder for the defendant company.

Mr. Lowder resumed the cross examination of the plaintiff—I received the \$100 gold bonus from the Philadelphia Engine Works at the end of June. It was not a commission but I put it in my account. I cannot say exactly when I received the commission of \$72 from L. Schlutee & Co. I don't remember whether I told the agent of the American Trading Company the exact amounts, but I told him they would appear in the account. I did not keep a special account of what commissions were due. I do not know of any commissions being paid to any agent of mine in America, but I sent a power of attorney to my brother to collect any commissions due to me. I do not know whether a commission of \$211 from the Port Wade Electric Company was paid to my brother. I do not remember whether Mr. Morse returned from the United States in March. I don't remember whether about that time Mr. Stone asked me if I had received any commissions from America, more especially from the Worthington Company, or that I had written to my brother to collect 5 per cent. from the company on the order sent through the American Trading Co. I remember the conversation between Mr. Morse, Mr. Stone, and myself on the 11th May last. Two days before I had received a letter proposing a new agreement for 3 years. The conversation took place in Mr. Morse's private office. I said that I wanted to consult my friends at home and the companies I represented before I gave an answer. I don't remember Mr. Morse during that conversation asking me if I had received any commissions, and my replying "not one cent." I believe Mr. Morse did mention something about my writing to my brother about a 5 per cent. commission from the Worthington Pumping Engine Co. I don't remember the exact words. I don't believe that I stated to Mr. Morse that I had never written such a letter. I believe I said it would appear in my statement. On the evening of May the 13th, at Mr. Morse's house, I believe I also stated that I should account for all commissions received in my statement at the end of my engagement. In conversation with Mr. Morse in the office on the afternoon of the 13th, I declined to state before Mr. Stone, whether I had received any commissions from America, but would give a full explanation in Court if they took proceedings as they threatened. I had a conversation with Mr. Trigloan on the afternoon of 13th and he advised me to go up to Mr. Morse at his house and make a full explanation to him, and I did so. I did not tell Mr. Morse that I came to make a confession. I had no confession to make. I remember I told him different matters which I wished him to thoroughly understand. I gave him an explanation and told him what I had received and what I expected to receive in the way of commissions and that all would go into my statement. I don't remember what specific items I mentioned beside the Ingersol commission. Mr. Morse seemed satisfied and said he would see Mr. Stone in the morning. The agency of the Worthington Company was improperly taken away from me by the people with whom I was associated—I do not consider

they were my employers, but that I had a share in the business. I don't think a copy of a letter dated Oct. 15th, 1895, from the American Trading Company in New York to the branch here, regarding the Worthington Pump Co.'s agency was given to me by Mr. Stone. I might have seen the letter. I do not remember a copy of another letter from the New York office of the American Trading Co., dated Dec. 14th, on the same subject, being handed to me by Mr. Stone, nor another dated Jan., in which it was stated the agency had been taken from me. I never saw the latter letter. Mr. Stone showed me a telegram on the 3rd Jan. from New York to the effect that from the end of that month the agency for the Worthington Company was to be transferred. I don't know whether the American Trading Co. had at that time accepted the agency. The matter was not discussed between Mr. Stone and myself. I asked for an explanation of the transfer from Mr. Stone, but could get none. I received a short letter from the Worthington Company informing me of the transfer, and dated the 3rd January, 1896, the same day that the cablegram was received. The advertisement of Worthington pump, etc., in the *Kogyo Zasshi*, I inserted in January 1897, and continued up till Sept. 20th. I don't know whether the translation of "sole agent" is right. I believe I subscribed myself as "agent" simply. The Worthington Company had written to me desiring me to continue a kind of agency for sales. I may have told Mr. Stone that I was advertising in the Japanese paper.

Mr. Lowder—Yesterday you made a charge against the American Trading Co. that they tried to take the Ingersol agency from you. Have you any evidence to that effect, or will you withdraw it?—I have no written evidence of it but I heard it in conversation and thought it quite probable, as the company had treated me in that way with the regard to the Worthington Company. I am quite willing to withdraw the charge. I don't think my writing to the Ingersol Company would tend to prevent the defendant company getting the lowest terms from the Ingersol Co. I believe I showed Mr. Stone my bank book some time in 1896. Some one had seen it on my desk and had remarked that rather heavy deposits were being made by me when I was only supposed to be receiving 200 yen per month. I heard these rumours and went to the agent and spoke to him about it, showing him my book. It was somewhere about May, 1897, I think. I explained that I had had a small legacy left me, about £90, which I paid in to my account in several instalments. The bank book was the Hongkong Savings Bank pass book. I don't know whether I said anything to the agent at the time about commissions. About that time I transferred my account to the Mitsui Bank. The first deposit I made in that Bank was the 3,200 yen from the Ingersol Co. That was on the 7th May. I did not change the account for the purpose of concealment; but because I could get a better rate of interest at the Japanese bank. The 3,200 yen did not all belong to me; part of it did. It was left to my honesty to pay it in at the end of the agreement when a statement of account was made. I have not advanced any right to pay myself. It on settling up my share of the profits did not amount to the sum of the commissions I retained of course it would have been my duty to return the balance. When I received the commission I believed I was within my rights to retain it till I made up my statement.

This concluded the cross-examination of plaintiff and the Court adjourned till 2 p.m.

Upon the Court reassembling after, the plaintiff was re-examined by Mr. Litchfield—

He said:—The book produced is one of the pass-books of the Hongkong and Shanghai Bank. I believe that according to the rules I cannot deposit more than 250 yen at one time. The interest allowed is at the rate of 3½ per cent. per annum. The other book produced is my deposit book at the Mitsui Bank. In that Bank I can deposit any amount at one time. The rate of interest allowed by the Bank is 5 1/100 per cent. per annum. I have not received any direct communication from the Worthington Co. on the point of selling their pumps only in Japan, referred to in the letter of the American Trading Co. of 15th Oct. 1895. I received a letter from the Philadelphia Engineering Works on May 26, saying that they had received the order for certain machinery through the American Trading Co., and that as I had quoted a price under their net rates there was no further reduction to be allowed, but as I had been working in their interests they had decided to allow me \$100 as compensation to myself. This was the \$100 which appeared in my statement of account of July 6th, 1897. The item of \$125 from the Philadelphia Engineering Works was the sum referred to in the letter dated 21st

May 1896, addressed to me, in which 2½ per cent. commission on an order for \$5,000 was promised. This item appeared in my statement as a commission due. My letter of 6th July to the American Trading Co. was a reply to their letter to me of 30th June.

To an Associate (Mr. Davidson)—I received a statement of account from the American Trading Co. at the end of the first year. I did not render them any statement then as I had none to make. I also received a statement up to June 1896, but none since. I have several times verbally demanded a statement of account but was put off on account of the office being busy. I did not publish the Worthington pump advertisement in any other engineering journal except the *Kogyo Zasshi*. I believe that the notices published in the *Kogyo Zasshi* by the American Trading Company were not inserted in any other engineering journal. All the engineering business done by the American Trading Co. during my connection with them was not done through me and my department, as was called for by my agreement. My contract with the Worthington Pump Company was in writing and was terminable at one month's notice. I am familiar with the misrepresentations which were made by the defendant Company to the Worthington Company. They were embodied in a letter written to me by the Worthington Company and I can further prove them by a witness now in Yokohama. (Letter produced and put in; exhibit S). The letter was dated July 26th and explained that the change of agency was made not through any dissatisfaction with plaintiffs management of the business but because the company understood that plaintiff had entered into the employment of the American Trading Co., on a salary, and that they understood that all their goods would be handled by plaintiff as before. They regretted that plaintiff should feel injured by their action and were willing to make any reparation in their power.)

Plaintiff, continuing, said—From my way of looking at it, the letter actually showed that the Worthington Company considered me to a certain extent to be their agent still. On receiving the last letter from the Worthington Company, objecting to my representing myself as the agent of the Company after the agency had been transferred to the American Trading Co., I withdrew the advertisement in the *Kogyo Zasshi*.

At this point Mr. Lowder said that if the Court desired it he was quite willing to withdraw his objection to the production of the series of letters between the Worthington Company and plaintiff, and the letters were put in as exhibits, and read by Mr. Lowder.

Mr. Lowder to plaintiff—Where, in the correspondence read, do you find any authority to act as agent for the Worthington Co. after the agency was transferred?—In their letter of July 21st, 1896, the Worthington Co. state:—"We made the arrangement with the American Trading Co. with the express understanding that you were to handle the goods and we have no expectation of doing any business without your assistance." In the letter of July 30th, 1897, they say to my brother that they propose sending one of their own men to Japan to go over the ground carefully, as they believed they could do better than they were for themselves. These were the only letters on which I founded my belief that I was still an agent of the Worthington Company.

The hearing of the case was here adjourned till 10 a.m. on Thursday.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE AFGHAN FRONTIER.

London, Dec. 16.

The brigades comprising Sir William Lockhart's force have been engaged in the severest fighting with the Afridis that has occurred since the capture of Dargai, and there have been heavy casualties, principally owing to night attacks on the rear guard and the waggon train. Lieut. West, of the Gurkhas, was killed; and Captain Norrie and Lieutenant Champain, of the Gurkhas, and Lieutenant Shortt of the Scots Fusiliers, were wounded.

A CONTRADICTION.

An official despatch denies the massacre at Bahr Gazal of Major Marchand and his following while on an expedition to the Nile as recently reported.

CRICKET IN AUSTRALIA.

In a test match at Sydney, Stoddart's team made 551, to which Prince Ranjitsinghi contributed 175. The Australians, after being all out for 237, followed on, and had got 126 runs with one wicket down.

MRS. CAREW.

London, Dec. 17.

Sir Matthew White Ridley, Secretary of State for the Home Department, has directed that Mrs. Carew shall undergo her life sentence at Aylesbury Convict Prison.

CRICKET IN AUSTRALIA.

In the test match at Sydney the Australian were all out for 408.

THE LATE FIRE IN CRIPPLE-GATE.

At the enquiry into the recent great fire in the City of London, a witness proved that there was an out-break in Walter Brown's show-rooms in two places simultaneously. The City Solicitor stated that it was clear that the fire was not accidental.

STARTLING MURDERS.

London, Dec. 18.

Alphonse Daudet and an actor named Ferrise were stabbed to death as they were entering the Adelphi Theatre by a former super named Archer.

GERMANY AND CHINA.

The Emperor William, at a banquet given previous to the sailing of the German squadron for China, in toasting Prince Henry, said that his mission was intended to be effective for the protection of his countrymen, but if anyone attempted to affront or prejudice Germany, strike with your mailed hand. Prince Henry, in an extraordinary speech, said—My only desire is to preach abroad the gospel of your sacred majesty.

The steam liner *Darmstadt* has been chartered to carry the German force intended for Kiao-chou and has already sailed.

London, Dec. 20.

The German China Squadron has arrived at Spithead. Prince Henry has proceeded to Osborne to take leave of the Queen.

THE ENGLISH AND GERMAN PRESS AND THE EMPEROR WILLIAM.

The English press generally, commenting on the recent utterances of the Emperor William and Prince Henry of Prussia, ridicules the extravagance of the Kiel speeches which are more suitable to heroes of melodrama. The German papers are tolerably outspoken in their comments, and especially in their references to Prince Henry's speech, which, they say, either verges on blasphemy or is altogether incomprehensible.

DEATH OF SIR W. E. MAXWELL.

The death has occurred of Sir W. E. Maxwell, K.C.M.G., Governor of the Gold Coast.

THE SITUATION IN THE FAR EAST.

London, Dec. 21.

The Times, in discussing the occupation of Port Arthur by a Russian squadron, states that Great Britain cannot remain indifferent to the changes now taking place, which, by their effects upon the Peking Government and the redistribution of naval power, may seriously affect British commercial supremacy.

The Times re-affirms the advantages of the possession by Great Britain of Chusan and some of the smaller islands at the mouth of the Yangtze, where a self-supporting station could be easily established.

The Times believes that the Japanese Government is likely to demand the retention of Wei-hai-wei.

DEATH OF SIR FRANK LOCKWOOD.

The death is announced of Sir Frank Lockwood, Q.C., M.P.

THE CRYPTOGRAM.

By R. A. Cleland, New Zealand.

A letter and parcel for you, uncle, both from Naples. The parcel must be of value, for it is registered. I had to sign for it.

"Why, it is from Anstruther. Let me see. He says he has been poking about the ruins of Pompeii for some time; has seen many wonderful things—houses, baths, theatres; no 'New Women' or 'New Boys' though. What's this! has made a discovery—forward to me—hopes I may be able to make it out. Give me the parcel quick."

So saying the professor jumped up in a state of the greatest excitement, and began opening the package, which was so securely fastened that his patience was nearly exhausted before he unfolded the contents.

"Why, it is an ancient manuscript; here is Pliny's name on it. It is of immense value!"

Professor Landel lived within a stone's throw of the South Kensington and Natural History Museums, which institutions, being a man of leisure, he was in the habit of visiting almost daily. He was an enthusiastic antiquarian and archaeologist, who was never tired of applying his great learning to the elucidation of the mysteries of the past, so that his excitement on receipt of the letter just described may be easily imagined. His niece, Ella Currie, was a fair-haired, blue-eyed maid, rather under than over the average height, of a particularly happy disposition, inclined to take a too superficial view of the professor's labours, but in spite of this his confidante and adviser. She was his right-hand man, if such an expression may be allowed, and to her he would unfold his plans, confide his hopes, and discuss the discoveries he had made before publishing them to the world. These two now eagerly examined the manuscript which lay before them, and of which the following is a copy.

Pro.....

- p - E - - - - - P - Ep P p - - /
 P - P - - - - - T - - C R /
 Al.....ties.....ere

C.....Plinius.....dus.

It was written on papyrus, was in good preservation, and was all perfectly legible except the parts indicated by the dotted lines.

"It's a cryptogram," said Ella. "How delightful! Perhaps it's a love letter. Fancy old Pliny writing a love letter! I have read how to decipher them. You have to look for the letter which appears oftenest, and it is an 'e'; then you take the next one, and it is 'i' or 'l'—or is it 'c'? I'm sure I forget; but we will soon find out. Let us try."

"My dear girl," said the professor, testily, "do not jump to conclusions so fast. I believe the document is written in cipher, but your rule will not apply, for there are not sufficient letters altogether to form an intelligible sentence. It is something much deeper than an ordinary newspaper puzzle, and will take much time and patience to solve."

"Oh, I know what it is, uncle. It is music, see the bars. It's the sol-fa notation, only they used different letters at that time. What was the Latin for 'doh'?"

"How absurd you are, child. You forget that this manuscript was written sometime before A.D. 79, the year in which Pompeii was destroyed, while Curwen, the inventor of the tonic sol-fa system, died quite recently."

"How aggravating!" exclaimed Ella. "But, uncle, is it not possible that Mr. Curwen accidentally hit upon the same method of writing music as was employed by the ancients?"

"That is certainly worth consideration," replied the professor, thoughtfully, "and I think I will consult Herr Metronome on the point. Another idea strikes me. Caius Plinius Secundus, called the Elder, was a literary man who wrote on natural history, art, and sciences; but at the same time he was an admiral of the Roman navy, and I would not be surprised if the mysterious document was an order to the fleet in cipher, or a plan of naval manoeuvres. I think I will write to Commander Navicula as well as to Metronome."

"Yes, do; and at the same time would it not be well to ask Cousin George what he thinks?" suggested Ella, who was a good deal interested in Cousin George, "he is so clever."

Well, I do not see what a barrister can know about it, but if you wish I will consult him also, only I fear that between his law and his chess he will have little time to devote to it."

The professor set to work, and by the evening had made three copies of the cryptogram. He wrote explanatory letters to his three friends, and sent a copy to each, requesting them to reply at their earliest convenience. For the next three days uncle and niece could talk of nothing else. They made all sorts of suggestions, but without arriving at any satisfactory result, so that it was a great relief when a letter at length arrived from Herr Metronome. It was in the following terms:—

Dear Professor,—The cryptogram which you sent me, and on which you ask my opinion, is undoubtedly music—the uniformity of the bars proves that—and it is in the notation which is now called the tonic sol-fa. Although I have searched every authority, I have been unable to find the Latin words which the letters indicate, and I have therefore been compelled to treat them as arbitrary signs denoting a musical sound or note just the same as our own doh, me, soh. Now in reading a cryptogram the rule is that the letters appearing oftenest are those most commonly used, so that it did not take much discrimination to see that p stood for doh and P for me. It would weary you if I detailed the methods I adopted to find the other notes and to arrange the dashes; suffice it is say that I have satisfied myself that the result which I now set before you is what was intended by the author. Singularly enough, you will see it bears a wonderful resemblance to a well-known tune, and, stranger still, the instructions for its performance indicate the title.

Yours faithfully, A METRONOME.

PROLUSIO.

—:— | —:— | —:— | —:— | d:— | d:m |
 :—d | :—m | r | d:— | m:d | m:— | —m |
 f:sl |

Ald languere sine tristitia canere.

To be sung with faintness, without hardness—piano. Caius Plinius Secundus.

"That seems perfectly satisfactory," said the professor meditatively, "but how strange it is that after a lapse of more than 1,800 years Mr. Curwen should have adopted a musical notation which he could not possibly have known was used by the Romans. It shows—"

"Gracious, uncle, it's 'Auld lang syne!' Just listen to this," and Ella hummed over the well-known tune.

"What an extraordinary thing; it makes the discovery more wonderful than ever. There is nothing new under the sun. It just shows—"

Again the professor was interrupted, this time by the postman's knock. Ella flew out of the room, and almost immediately returned with another letter, which she handed to her uncle. "From Navicula. Let us hear what he has to say," said the professor, tearing it open. "Humph! he has got a solution also. Just listen to this my dear —"

Dear Professor,—The cryptogram which you sent me, and on which you ask my opinion, is undoubtedly the plan of a naval manoeuvre. The letters signify the names of the ships, and the dashes denote the distance apart in cables as follows:—

PRONUNCIATUM.

Pylhus	reguator	
Publcola		
Tiberius	pictor	Cesar
Catullus	Ereptor	plautus
Romulus		
Philippus		pacivius
Eversor		Pompeius
polybius		
Paulus		
propretius		

Alius ex alio classis in tres divisiones procedere (one after the other the fleet will advance in three divisions).

CAIUS PLINIUS SECUNDUS.

The above shows that the Romans were tacticians, and knew how to manoeuvre a fleet; and by the way, it is worthy of notice that the names

of the warriors are in capitals, while those of the literary men are in small letters, showing that in those days the sword was mightier than the pen.—Your faithfully,

C. NAVICULA.

"It is very extraordinary that we should get two solutions quite contradictory, and both feasible from two men who are both equally positive as to the correctness of their conclusions. I don't know what to think."

"Wait until you hear from Cousin George," said Ella; "he will let us know which of the two is correct."

In due course his letter arrived, and was as follows:—

Dear Uncle,—At the first examination of your mysterious document I could make nothing of it. I thought it might perhaps be a summons in cipher or an affidavit or other legal writing, and spent many hours trying to decipher it, but in vain. Suddenly a light dawned upon me. I saw that each division, or bar, as I may call it, contained eight dashes or letters. There were eight bars, making altogether sixty-four separate signs—seventeen letters and forty-seven dashes. Now, as you know, I am a bit of a chess enthusiast, and it occurred to me at once that this might signify a chess board with seventeen pieces on it, represented by letters. Further examination revealed the fact that if I counted the dashes and substituted figures I had a position in the Forsyth notation. Feeling that I was on the right track, I set to work to discover what the letters stood for, and in this did not experience much difficulty. C., count, a tutor, or curvus, bent, signifies a bishop, the latter term being an allusion to the shape of the piece; P., pedes, a foot-soldier, pawn; R., rex, king; E., eques, a horseman, knight; T., turris, a tower, castle, or rook. The capital letters indicate white pieces, the small letters black and now the cryptogram would be stated in the Forsyth notation as follows:—

PROBLEMA.

8 | 2 B | p 3 | 2 p | P 3 | 2 k 5 | 2 p K | 5 |
P | K | P P 2 | 3 P | P 2 | 2 R 2 B K | 1 |
Albi trahunt et in tres motus reprimere.

DIAGRAM OF ABOVE POSITION.

BLACK.

WHITE.

White to play and mate in three moves.

Whether this is a correct interpretation of your manuscript I must leave you to decide, certainly it is intelligible and on examination you will find the problem is a good one, taking into account the difficulties under which Pliny must have labored. It is very strange, no doubt, that Mr. Forsyth, of Edinburgh, should adopt the same method of indicating chess positions as was used by Pliny before the destruction of Pompeii, and can only be accounted for by the "similarity of ideas in great minds." With love to Ella—I am,

Your affectionate nephew,

GEORGE.

"Well," said Ella triumphantly, "I knew Cousin George would solve it; he can do anything. What awful rubbish the others made of it; they simply turned everything to suit themselves. I have no patience with such people, while George—"

"Gently, gently, we have no certainty that George is right, and there is much to be said for the views of the other gentlemen. I feel this is too great a discovery to be kept secret and I will therefore send the particulars and the whole of the correspondence to the papers and allow the public to judge for themselves." So saying, the professor dismissed Ella, and set to work to get his manuscript ready for the press.

EXPORTS.

RAW SILK.

The business, which received a new impetus about a fortnight ago, has now dropped to a very small amount, sales during the period from the 18th to 24th instant only amounting to about 850 piculs, at firm prices. Stocks are light, scarcely anything having come into the market since

last week when the total visible supply stood at 10,000 piculs of all sorts. The *Rosetta* took 1,138 bales for Europe on the 21st inst.; and the *Belgic* 1,184 bales for America on the 18th. Quotations are nominal.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS,

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.Mr. J. T. Cooper, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining "stock."Sold by all Chemists and Medicine Vendors throughout the
World.
May 1st, 1897.
